13. For the purposes of this report, the data has been reported to the Limit of Detection (LOD). Values between the LOD and the Limit of Quantitation (LOQ) are acquired in a region of less-certain quantification.

14. Soluble and total digestates were prepared within the same preparation batch and will be noted as such on the Inorganics Data Summary Report.

15. LvL is NELAP accredited by the state of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

16. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

Iain Daniels

Date: 13 April 2009
To: Washington Closure Hanford (technical representative)
From: ELR Consultants
Project: Columbia River Component of the RCBRA – Surface Water
Subject: Semivolatile - Data Package No. K1401-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1401 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Data
J17K50	10/17/08	Water	C	See note 1
J17K51	10/17/08	Water	C	See note 1
J17K52	10/17/08	Water	C	See note 1
J17R67	10/17/08	Water	C	See note 1

1 – Semivolatiles by 8270C & diesel range organics by 8015B.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

- **Holding Times & Sample Preservation**

Analytical holding times were assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Samples must be extracted within 7 days of the date of sample collection and analyzed within 40 days from the date of extraction.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Method Blanks**

Method blank analyses are conducted to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. Analytical results for analytes present in any sample at less than five times the concentration of that analyte found in the associated blank are qualified as non-detects and flagged "U". Common laboratory contaminants present in samples at less than ten times the concentration of that analyte found in the associated blank are qualified as non-detects. If a sample result is less than the CRQL and is less than five times (or less than ten times for lab contaminants) the highest associated blank result, the sample result value is raised to the CRQL level and qualified as undetected "U".

All method blank results were acceptable.

Field Blanks

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike/Matrix Spike Duplicate & Blank Spike Recoveries

Matrix spike/matrix spike duplicate analyses are used to assess the analytical accuracy of the reported data and the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike/matrix spike duplicate analyses are performed in duplicate using five compounds for which percent recoveries must be within a range of 50-150% or within laboratory control limits. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Undetected sample results with spike recoveries below control limits are qualified as estimates and flagged "UJ". Undetected sample results are not qualified if the spike recovery is above control limits. Sample results greater than five times the spike concentration require no qualification.

Due to a matrix spike and/or matrix spike duplicate recoveries outside QC limits, all 2,4-dichlorophenol (56%), 4-chloroanaline (2%), 3-nitroanaline (5%) and 3,3'-dichlorobenzidine (0% & 10%) results were qualified as estimates and flagged "J".

Due to a matrix spike and matrix spike duplicate results outside QC limits (78% & 57%), all diesel range organic results were qualified as estimates and flagged "J".

Due to the lack of an LCS recovery, all semivolatile results were qualified as estimates and flagged "J".

Due to the lack of a matrix spike, matrix spike duplicate or LCS analysis, all motor oil results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Surrogate Recovery

The analyses of surrogate compounds provide a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the EPA CLP program. If two surrogates of the same class of compounds (base/neutral or acid) are out of control limits, all associated sample results greater than the contract required quantitation limit (CRQL) are qualified as estimates and flagged "J". Sample results less than the CRQL and below the lower control limit are qualified as estimates and flagged "UJ". Sample results less than the CRQL with recoveries above the upper control limit require no qualification. If a surrogate recovery is less than 10%, detects are qualified as estimates and flagged "J" and nondetects are rejected and flagged "UR".

Due to a surrogate recovery outside QC limits (11%), the 2-chlorophenol, 2,4-dichlorophenol and 4-chloro-3-methylphenol results in sample J17K50 were qualified as estimates and flagged "J".

All other surrogate results were acceptable.

Precision

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike (MS)/matrix spike duplicate (MSD) results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed by the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. Samples results must be within RPD limits of +/-20%. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

Due to RPDs outside QC limits, all 2-nitrophenol (46%), 2,4-dichlorophenol (39%), 4-chloroanaline (185%), 2-nitroanaline (24%), 3-nitroanaline (180%), 2,4-dinitrophenol (39%), 4-nitrophenol (23%), 4-nitroanaline (81%), 4,6-dinitro-2-methylphenol (26%), n-nitrosodiphenylamine (55%), pentachlorophenol (26%), 3,3'-dichlorobenzidine (200%), bis(2-ethylhexyl)phthalate (21%), di-n-octylphthalate (22%), benzo(b)fluroanthene (20.3%), benzo(k)fluoranthene (21.5%), benzo(a)pyrene (22%) and dibenz(a,h)anthracene (21%) results were qualified as estimates and flagged "J".

Due to an RPD outside QC limits (31%), all diesel range organic results were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

One set of field duplicates (J17K52/J17R67) were submitted for analysis. Laboratory duplicates are compared using the same criteria as for laboratory duplicates. All field duplicate results were acceptable.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQL's) to ensure that laboratory detection levels meet the required criteria. Twenty-eight analytes exceeded the RQL. Under the WCH statement of work, no qualification is required. All other analytes met the RQL.

- **Completeness**

Data package No. K1401 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to a matrix spike and/or matrix spike duplicate recoveries outside QC limits, all 2,4-dichlorophenol (56%), 4-chloroanaline (2%), 3-nitroanaline (5%) and 3,3'-dichlorobenzidine (0% & 10%) results were qualified as estimates and flagged "J".
- Due to a matrix spike and matrix spike duplicate results outside QC limits (76% & 57%), all diesel range organic results were qualified as estimates and flagged "J".

- Due to the lack of an LCS recovery, all semivolatile results were qualified as estimates and flagged "J".

- Due to the lack of a matrix spike, matrix spike duplicate or LCS analysis, all motor oil results were qualified as estimates and flagged "J".

- Due to a surrogate recovery outside QC limits (11%), the 2-chlorophenol, 2,4-dichlorophenol and 4-chloro-3-methylphenol results in sample J17K50 were qualified as estimates and flagged "J".

- Due to RPDs outside QC limits, all 2-nitrophenol (46%), 2,4-dichlorophenol (39%), 4-chloroanaline (185%), 2-nitroanaline (24%), 3-nitroanaline (180%), 2,4-dinitrophenol (39%), 4-nitrophenol (23%), 4-nitroanaline (81%), 4,6-dinitro-2-methylphenol (26%), n-nitrosodiphenylamine (55%), pentachlorophenol (26%), 3,3'-dichlorobenzidine (200%), bis(2-ethylhexyl)phthalate (21%), di-n-octylphthalate (22%), benzo(b)fluroanthene (20.3%), benzo(k)fluoranthene (21.5%), benzo(a)pyrene (22%) and dibenz(a,h)anthracene (21%) results were qualified as estimates and flagged "J".

- Due to an RPD outside QC limits (31%), all diesel range organic results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Twenty-eight analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH validation SOW are as follows:

U	-	Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the same quantitation limit corrected for sample dilution and moisture content by the laboratory.
UJ	-	Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.
J	-	Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.
R	-	Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.
UR	-	Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.
NJ	-	Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).
N	-	Indicates presumptive evidence of a compound. The data may not be valid for some specific applications usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

SEMIVOLATILE ORGANIC CHEMISTRY DATA QUALIFICATION SUMMARY*

SDG: K1401	REVIEWER: ELR	Project: RCBRA	PAGE_1_OF_1
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
2,4-dichlorophenol 4-chloroanaline 3-nitroanaline 3,3'-dichlorobenzidine	J	All	MS/MSD recovery

Laboratory Narrative and Chain-of-Custody Documentation

LVLI
LIONVILLE LABORATORY INC.

Case Narrative

Client: WC-HANFORD RC-115 K1399
LVL #: 0810L109

W.O. #: 60049-001-001-0001-00
Date Received: 10-21-2008

SEMIVOLATILE

Four (4) water samples were collected on 10-17-2008.

The samples and their associated QC samples were extracted according to Lionville Laboratory SOPs based on SW 846 method 3520C on 10-22-2008 and analyzed according to criteria set forth in Lionville Laboratory SOPs based on SW 846 Method 8270C for TCL Semivolatile target compounds on 10-28-2008 and 11-01,02-2008.

The following is a summary of QC results accompanying the sample results. Lionville Laboratory (LVL) certifies that all test results meet the requirements of NELAC except as noted below:

1. Discrepancies from the sample acceptance policy have been recorded on the Sample Receipt Checklist.
2. Samples were extracted and analyzed within holding time.
3. Non-target compounds were detected in these samples.
4. Two (2) of forty-eight (48) surrogate recoveries were outside acceptance criteria. However, surrogate recovery acceptance criteria were met (i.e., no more than one outlier per fraction {acid and base neutral} and no recoveries less than 10%).
5. Five (5) of one hundred twenty-eight (128) matrix spike recoveries were outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR# 08MS254) has been enclosed.
6. Sixty-three (63) of sixty-four (64) blank spike recoveries were outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR# 08MS254) has been enclosed.
7. The method blank was below the reporting limit for all target compounds.
8. All initial calibrations associated with this data set were within acceptance criteria.
9. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.
10. Internal standard area and retention time criteria were met.
11. Manual integrations are performed according to SOP QA-125 to produce quality data with the utmost integrity. All manual integrations are required to be technically valid and properly documented. Appropriate technical flags are defined in the Glossary ("Technical Flags For Manual Integration").

LVLI
LIONVILLE LABORATORY INC.

12. LVL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

13. I certify, that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data, contained in this hard-copy data package, has been authorized, by the Laboratory Manager or a designee, as verified by the following signature.

Lionville Laboratory Sample Discrepancy Report (SDR)

SDR #: 08ML114

Initiator: Sharon Sayler
Date: 11-10-08
Client: WC Hanford RL115 Ehyu

Batch: 08I0L109
Samples: BS, MS, MSD
Method: [✓ GW/HS]/CA/W/CLP

Parameter: 8270
Matrix: Ground Water
Prep Batch: 08IEH(22

1. Reason for SDR

a. COC Discrepancy
__ Tech Profile Error
__ Transcription Error
__ Client Request
__ Wrong Test Code
__ Sampler Error on C-O-C
__ Other ______________

b. General Discrepancy
__ Missing Sample/Extract*
__ Hold Time Exceeded
__ Improper Bottle Type
__ Container Broken
__ Insufficient Sample*
__ Not Amenable to Analysis
__ Wrong Sample Pulled
__ Preservation Wrong
__ Label ID's Illegible
__ Received Past Hold

Note*: Verified by (Log-In) or (Prep Group) (circle)...signature/date: ______________

c. Problem (include all relevant specific results; attach data if necessary)

① No or low recovery of several spike analytes in the MS + MSD (2,4-dichlorophenol, 4,6-[illegible] 3-nitroaniline)

② No spike added to BS (analyst error)

2. Known or Probable Causes(s) Acidic phenols, chloroanilines, nitroanilines are subject to erratic chromatographic behavior especially if the GC system is contaminated with high boiling material

11/14/08

3. Discussion and Proposed Action

__ Re-log
__ Entire Batch
__ Following Samples: ________
__ Re-leach
__ Re-extract
__ Re-digest
__ Revise EDD
__ Change Test Code to ________
__ Place On/Take Off Hold (circle)

Other Description:

Narrate

4. Project Manager Instructions...signature/date: 11/17/08

✓ Concur with Proposed Action
__ Disagree with Proposed Action; See Instruction
__ Include in Case Narrative
✓ Client Contacted
Date/Person: 11/17/08
__ Add
__ Cancel

5. Final Action...signature/date: ______________

__ Verified re-[log][leach][extract][digest][analysis] (circle)
✓ Included in Case Narrative
__ Hard Copy COC Revised
__ Electronic COC Revised
__ EDD Corrections Completed

Other Explanation:

When Final Action has been recorded, forward original to QA for diposition.

DIESEL RANGE ORGANICS

Four (4) water samples were collected on 10-17-2008.

The samples and their associated QC samples were extracted on 10-22-2008 and analyzed according to Lionville Laboratory SOPs based on SW846, 3rd Edition procedure on 10-27,28-2008. The extraction procedure was based on method 3520C and the extracts were analyzed based on method 8015B for Diesel Range Organics (DRO).

The following is a summary of QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. Discrepancies from the Sample acceptance policy have been recorded on the Sample Receipt Checklist.
2. The method blank was below the reporting limits for all target compounds.
3. All obtainable surrogate recoveries were within acceptance criteria.
4. All blank spike recoveries were within acceptance criteria.
5. All matrix spike recoveries were within acceptance criteria.
6. All initial calibrations associated with this data set were within acceptance criteria.
7. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.

The results presented in this report relate only to the analytical testing and conditions of the samples at receipt and during storage. All pages of this report are integral parts of the analytical data. Therefore, this report should only be reproduced in its entirety of 13 pages.

Date: 13 April 2009
To: Washington Closure Hanford (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA – Surface Water
Subject: Volatiles - Data Package No. K1401-LLI

INTRODUCTION

This memo presents the results of data validation on Summary Data Package No. K1401 prepared by Lionville Laboratory Inc. (LLI). A list of the samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Date
J17K50	10/17/08	Water	C	See note 1
J17K51	10/17/08	Water	C	See note 1
J17K52	10/17/08	Water	C	See note 1
J17K87	10/17/08	Water	C	See note 1
J17K73	10/17/08	Water	C	See note 1

1 - Volatiles by 8260B.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

- Holding Times & Sample Preservation

Analytical holding times are assessed to ascertain whether the holding time requirements were met by the laboratory. Preserved water samples must be analyzed within: 14 days of the date of sample collection for preserved samples and 7 days for unpreserved samples.

If holding times are exceeded, but not by greater than twice the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than twice the limit, all associated detected sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Blanks**

Method blank analyses are conducted to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. Analytical results for analytes present in any sample at less than five times the concentration of that analyte found in the associated blank are qualified as non-detects and flagged "U". Common laboratory contaminants present in samples at less than ten times the concentration of that analyte found in the associated blank are qualified as non-detects. If a sample result is less than the CRQL and is less than five times (or less than ten times for lab contaminants) the highest associated blank result, the sample result value is raised to the CRQL level and qualified as undetected "U".

Due to method blank contamination, all detected methylene chloride results were qualified as undetected, raised to the RQL and flagged "U".

All other method blank results were acceptable.

Field Blanks

One trip blank (J17K73) was submitted for analysis. All field blank results were acceptable.

- **Accuracy**

Matrix Spike/Matrix Spike Duplicate & Laboratory Control Sample

Matrix spike/matrix spike duplicate analyses are used to assess the analytical accuracy of the reported data and the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike/matrix spike duplicate analyses are performed in duplicate using five compounds for which percent recoveries must be within a range of 50-150% or within laboratory control limits. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Undetected sample results with spike recoveries below control limits are qualified as estimates and flagged "UJ". Undetected sample results are not qualified if the spike recovery is above control limits. Sample results greater than five times the spike concentration require no qualification.

All accuracy results were acceptable.

Surrogate Recovery

The analyses of surrogate compounds provide a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the EPA CLP program. If two surrogates of the same class of compounds (base/neutral or acid) are out of control limits, all associated sample results greater than the contract required quantitation limit (CRQL) are qualified as estimates and flagged "J". Sample results less than the CRQL and below the lower control limit are qualified as estimates and flagged "UJ". Sample results less than the CRQL with recoveries above the upper control limit require no qualification. If a surrogate recovery is less than 10%, detects are qualified as estimates and flagged "J" and nondetects are rejected and flagged "UR".

All surrogate recovery results were acceptable.

- **Precision**

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike (MS)/matrix spike duplicate (MSD) results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed by the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. Samples results must be within RPD limits of +/-20%. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

Due to RPDs outside QC limits, all acetone (33%), 2-butanone (40%), 4-methyl-2-pentanone (40%), 2-hexanone (40%) and 1,1,2,2-tetrachloroethane (22%) results were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

One set of field duplicates (J17K52/J17K67) were submitted for analysis. Laboratory duplicates are compared using the same criteria as for laboratory duplicates. All field duplicate results were acceptable.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the minimum detection limits (MDLs) to ensure that laboratory detection levels meet the required criteria. All results met the RQL. Under the WCH statement of work, no qualification is required.

- **Completeness**

Data package No. K1401 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to method blank contamination, all detected methylene chloride results were qualified as undetected, raised to the RQL and flagged "U".
- Due to RPDs outside QC limits, all acetone (33%), 2-butanone (40%), 4-methyl-2-pentanone (40%), 2-hexanone (40%) and 1,1,2,2-tetrachloroethane (22%) results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validator in compliance with the WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

VOLATILE ORGANIC DATA QUALIFICATION SUMMARY*

SDG: K1401	**REVIEWER: ELR**	**Project: RCBRA**	**PAGE 1 OF 1**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Methylene chloride	J	All detected results	Method blank contamination
Acetone 2-butanone 4-methyl-2-pentanone 2-hexanone 1,1,2,2-tetrachloroethane	J	All	RPD

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Laboratory Narrative and Chain-of-Custody Documentation

LvLI
LIONVILLE LABORATORY INC.

Case Narrative

Client: WC-HANFORD RC-115
LVL #: 0810L109
SDC/SAF # K1401/RC-115

W.O. #: 60049-001-001-0001-00
Date Received: 10-21-2008

GC/MS VOLATILE

Five (5) water samples were collected on 10-17-2008.

The samples and their associated QC samples were analyzed according to criteria set forth in Lionville Laboratory SOPs based on SW 846 Method 8260B for TCL Volatile target compounds on 10-25-2008.

The following is a summary of QC results accompanying the sample results. Lionville Laboratory (LvLI) certifies that all test results meet the requirements of NELAC except as noted below:

1. Samples were analyzed within required holding time.
2. Non-target compounds were not detected in these samples.
3. All surrogate recoveries were within acceptance criteria.
4. Four (4) of seventy (70) matrix spike recoveries were outside acceptance criteria.
5. All blank spike recoveries were within acceptance criteria.
6. The method blank contained the common laboratory contaminant Methylene Chloride at levels less than 1x the reporting limit
7. All internal standard area and retention time criteria were met.
8. Manual integrations are performed according to SOP QA-125 to produce quality data with utmost integrity. All manual integrations are required to be technically valid and properly documented. Appropriate technical flags are defined in the Glossary ("Technical Flags For Manual Integration").

13

Case Narrative

9. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager

10. "I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

Iain Daniels

F.1.1.4 SDG K1421

SAF-RC-115
Columbia River Component of the RCBRA – Surface Water
FINAL VALIDATION PACKAGE

COMPLETE COPY OF VALIDATION PACKAGE TO:

Kathy Wendt H4-21

COMMENTS:

SDG K1421 **SAF-RC-115**

Sampling Location: **PRD/3SW**
PRD/4SW
RBLS-1SW

Date: 13 April 2009
To: Washington Closure Hanford Inc. (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA - Surface Water
Subject: Radiochemistry - Data Package No. K1421-EB

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1421 prepared by Eberline Services (EB). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Data
J17RJ1	10/29/08	Water	C	See note 1
J17RJ2	10/29/08	Water	C	See note 1
J17RJ3	10/29/08	Water	C	See note 1

1 – Tritium, carbon-14, total strontium, technetium-99, alpha spectroscopy & gamma spectroscopy.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Holding times are calculated from Chain-of-Custody forms to determine the validity of the results. The maximum holding time for radiochemical analysis is 6 months. All holding times were acceptable.

- **Preparation (Method) Blanks**

Laboratory Blanks

Blank samples are analyzed to determine if positive results are due to laboratory reagent, sample container, or detector contamination. If blank analysis results indicate the presence of an analyte above the minimum detectable activity (MDA), the following qualifiers are applied: All positive sample results less than five times the highest blank concentration are qualified as estimates and flagged "J"; sample results below the MDA are qualified as undetected and flagged "U"; sample results above the MDA and greater than five times the highest blank concentration are not qualified.

All blank results were acceptable (although the MDA for tritium exceeded QC limits).

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Accuracy is evaluated from laboratory control sample (LCS) or blank spike sample (BSS) batch samples and spiked samples from the analytical batch. Measured activities are compared to the known added amounts. The acceptable LCS or BSS and matrix spike (MS) recovery range is 70-130%. In addition, samples may be spiked with a radiochemical tracer to assist in isolating the radioisotope of interest with the yield of the tracer being used in calculating sample activity. The acceptable range for tracer recovery is 20% to 105%. Spike sample results outside the above ranges result in associated sample results being qualified as estimates, or not qualified, depending on the activity of the individual sample. Results are rejected for LCS/BSS recoveries of less than 30% and tracer recoveries of less than 20%, and tracer recoveries of greater than 115% for detected results.

Due to the lack of an LCS analysis, all thorium-228 and thorium-232 results were qualified as estimates and flagged "J".

Due to a tracer recovery outside QC limits (106%), the thorium-230 result in sample J17RJ1 was qualified as an estimate and flagged "J".

All other accuracy results were acceptable.

- **Laboratory Duplicates**

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the contract required detection limit (CRDL) and the RPD is less than 20%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All duplicate results were acceptable.

Field Duplicates

No field duplicates were submitted for analysis.

- **Detection Levels**

Reported analytical detection levels for undetected analytes are compared against the project RQLs to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package No. K1421 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to the lack of an LCS analysis, all thorium-228 and thorium-232 results were qualified as estimates and flagged "J".
- Due to a tracer recovery outside QC limits (108%), the thorium-230 result in sample J17RJ1 was qualified as an estimate and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH statement of work are as follows:

U - Indicates the compound or analyte was analyzed for and not detected above the minimum detectable activity (MDA) in the sample. The value reported is the sample result corrected for sample dilution and moisture content by the laboratory. The data is usable for decision making purposes.

UJ - Indicates the compound or analyte was analyzed for and not detected at concentrations above the minimum detectable activity (MDA) in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate, but is usable for decision making purposes.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

Appendix 2

Summary of Data Qualification

RADIOCHEMISTRY DATA QUALIFICATION SUMMARY*

SDG: K1421	**REVIEWER: ELR**	**Project: RCBRA**	**PAGE 1 OF 1**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Thorium-228 Thorium-232	J	All	No MS analysis
Thorium-230	J	J17RJ1	Tracer recovery

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Laboratory Narrative and Chain-of-Custody Documentation

1.0 GENERAL

Washington Closure Hanford (WCH) Sample Delivery Group K1421 was composed of three water samples designated under SAF No. RC-115 with a Project Designation of: Columbia River Component of the RCBRA – Surface Water.

The samples were received as stated on the Chain-of-Custody documents. Any discrepancies are noted on the Eberline Services Sample Receipt Checklist included in the original report. The results were sent to WCH via e-mail December 12, 2008.

2.0 ANALYSIS NOTES

2.1 Tritium Analysis

No problems were encountered during the course of the analyses.

2.2 Carbon-14 Analysis

No problems were encountered during the course of the analyses.

2.3 Strontium-90 Analysis

The strontium carrier yield for sample J17RJ1 was 106%, greater than the upper control limit of 105%. No other problems were encountered during the course of the analyses.

2.4 Technetium-99 Analysis

No problems were encountered during the course of the analyses.

2.5 Isotopic Thorium Analysis

No problems were encountered during the course of the analyses.

2.6 Isotopic Uranium Analysis

No problems were encountered during the course of the analyses.

2.7 Isotopic Plutonium Analysis

No problems were encountered during the course of the analyses.

2.8 Gamma Spectroscopy

No problems were encountered during the course of the analyses.

Date: 13 April 2009
To: Washington Closure Hanford (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA – Surface Water
Subject: Volatiles - Data Package No. K1421-LLI

INTRODUCTION

This memo presents the results of data validation on Summary Data Package No. K1421 prepared by Lionville Laboratory Inc. (LLI). A list of the samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	[illegible]
J17RJ1	10/29/08	Water	C	See note 1
J17RJ2	10/29/08	Water	C	See note 1
J17RJ3	10/29/08	Water	C	See note 1
J17K75	10/29/08	Water	C	See note 1

1 - Volatiles by 8260B.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

- **Holding Times & Sample Preservation**

Analytical holding times are assessed to ascertain whether the holding time requirements were met by the laboratory. Preserved water samples must be analyzed within: 14 days of the date of sample collection for preserved samples and 7 days for unpreserved samples.

If holding times are exceeded, but not by greater than twice the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than twice the limit, all associated detected sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Blanks**

Method blank analyses are conducted to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. Analytical results for analytes present in any sample at less than five times the concentration of that analyte found in the associated blank are qualified as non-detects and flagged "U". Common laboratory contaminants present in samples at less than ten times the concentration of that analyte found in the associated blank are qualified as non-detects. If a sample result is less than the CRQL and is less than five times (or less than ten times for lab contaminants) the highest associated blank result, the sample result value is raised to the CRQL level and qualified as undetected "U".

Due to method blank contamination, all methylene chloride results were qualified as undetected, raised to the RQL and flagged "U".

All other method blank results were acceptable.

Field Blanks

One trip blank (J17K75) was submitted for analysis. Toluene was detected in the field blank. Under the WCH statement of work, no qualification is required. All other field blank results were acceptable.

- **Accuracy**

Matrix Spike/Matrix Spike Duplicate & Laboratory Control Sample

Matrix spike/matrix spike duplicate analyses are used to assess the analytical accuracy of the reported data and the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike/matrix spike duplicate analyses are performed in duplicate using five compounds for which percent recoveries must be within a range of 50-150% or within laboratory control limits. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Undetected sample results with spike recoveries below control limits are qualified as estimates and flagged "UJ". Undetected sample results are not qualified if the spike recovery is above control limits. Sample results greater than five times the spike concentration require no qualification.

All accuracy results were acceptable.

Surrogate Recovery

The analyses of surrogate compounds provide a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the EPA CLP program. If two surrogates of the same class of compounds (base/neutral or acid) are out of control limits, all associated sample results greater than the contract required quantitation limit (CRQL) are qualified as estimates and flagged "J". Sample results less than the CRQL and below the lower control limit are qualified as estimates and flagged "UJ". Sample results less than the CRQL with recoveries above the upper control limit require no qualification. If a surrogate recovery is less than 10%, detects are qualified as estimates and flagged "J" and nondetects are rejected and flagged "UR".

All surrogate recovery results were acceptable.

- **Precision**

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike (MS)/matrix spike duplicate (MSD) results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed by the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. Samples results must be within RPD limits of +/-20%. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

Due to RPDs outside QC limits, all acetone (40%), 2-butanone (44%), bromoform (25%), 4-methyl-2-pentanone (41%), 2-hexanone (44%) and 1,1,2,2-tetrachloroethane (23%) results were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the minimum detection limits (MDLs) to ensure that laboratory detection levels meet the required criteria. All results met the RQL.

- **Completeness**

Data package No K1421 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to method blank contamination, all methylene chloride results were qualified as undetected, raised to the RQL and flagged "U".
- Due to RPDs outside QC limits, all acetone (40%), 2-butanone (44%), bromoform (25%), 4-methyl-2-pentanone (41%), 2-hexanone (44%) and 1,1,2,2-tetrachloroethane (23%) results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validator in compliance with the WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

VOLATILE ORGANIC DATA QUALIFICATION SUMMARY*

SDG: K1421	**REVIEWER: ELR**	**Project: RCBRA**	**PAGE 1 OF 1**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Methylene chloride	U at RQL	All detected results	Method blank contamination
Acetone 2-butanone Bromoform 4-methyl-2-pentanone 2-hexanone 1,1,2,2-tetrachloroethane	J	All	RPD

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Laboratory Narrative and Chain-of-Custody Documentation

LvLI
LIONVILLE LABORATORY INC.

Case Narrative

Client: WC-HANFORD RC-115
LVL #: 0810L175
SDG/SAF # K1421/ RC-115

W.O. #: 60049-001-001-0001-00
Date Received: 10-31-2008

GC/MS VOLATILE

Four (4) water samples were collected on 10-29-2008.

The samples and their associated QC samples were analyzed according to criteria set forth in Lionville Laboratory SOPs based on SW 846 Method 8260B for TCL Volatile target compounds on 11-03-2008.

The following is a summary of QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. Samples were analyzed within required holding time.
2. Non-target compounds were not detected in these samples.
3. All surrogate recoveries were within acceptance criteria.
4. All matrix spike recoveries were within acceptance criteria.
5. All blank spike recoveries were within acceptance criteria.
6. The method blank contained the common laboratory contaminant Methylene Chloride at a level less than 1x the reporting limit
7. All internal standard area and retention time criteria were met.
8. Manual integrations are performed according to SOP QA-125 to produce quality data with utmost integrity. All manual integrations are required to be technically valid and properly documented. Appropriate technical flags are defined in the Glossary ("Technical Flags For Manual Integration").

14

9. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager

10. "I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

Iain Daniels

Date: 13 April 2009
To: Washington Closure Hanford (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA – Surface Water
Subject: Inorganic - Data Package No. K1421-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1421 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	[illegible] Data
J17RJ1	10/29/08	Water	C	See note 1
J17RJ2	10/29/08	Water	C	See note 1
J17RJ3	10/29/08	Water	C	See note 1
J17RJ8	10/29/08	Water	C	See note 1
J17RJ9	10/29/08	Water	C	See note 1
J17RK0	10/29/08	Water	C	See note 1

1 - ICP metals (6010B) and mercury (7471A).

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Samples must be analyzed within 6 months for ICP metals and 28 days for mercury.

All holding times were acceptable.

- **Preparation (Method) Blanks**

Preparation Blanks

At least one preparation blank, consisting of deionized distilled water processed through each sample preparation and analysis procedure, must be prepared and analyzed with every sample delivery group. In the case of positive blank results, samples with digestate concentrations less than five times the preparation blank value have had their associated values qualified as non-detected and flagged "U". Samples with concentrations of greater than five times the highest blank concentration do not require qualification.

In the case of negative blank results, if the absolute value exceeds the contract required detection limit (CRDL), all nondetects are rejected and flagged "UR" and all detects that are less than ten times the absolute value of the associated preparation blank result are qualified as estimates and flagged "J". If the absolute value of the negative preparation blank is greater than the instrument detection limit (IDL) and less than or equal to the CRDL, all nondetects are qualified as estimates and flagged "UJ" and all detects less than ten times the absolute value of the blank are qualified as estimates and flagged "J". If the sample results are greater than ten times the absolute value of the preparation blank, no qualification is necessary.

All preparation blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

All accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicate

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the 100 and 300 Area RQLs to ensure that laboratory detection levels meet the required criteria. All undetected aluminum, boron, barium, cobalt, copper, lithium, manganese, molybdenum, sodium,, and vanadium results exceeded the RQL. Under the WCH statement of work, no qualification is required. All other results met the RQL.

- **Completeness**

Data package No. K1421 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

None found.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

METALS DATA QUALIFICATION SUMMARY*

SDG: K1421	**REVIEWER: ELR**	**Project: RCBRA**	**PAGE 1 OF 1**
COMMENTS: No qualifiers assigned			

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

W.O.#: 60049-001-001-0001-00
Date Received: 10-31-08

METALS CASE NARRATIVE

The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below.

1. This narrative covers the analyses of 6 water samples.

2. The samples were prepared and analyzed in accordance with <u>SW-846</u> protocol. All field samples for ICP analysis have been concentrated 2-fold during digestion so that the contract required detection limits (CRDL) for target analytes could be met. The resultant preconcentration factors were applied to the field sample concentrations, the preparation blank (MB), matrix spike (MS), duplicate, and laboratory control samples (LCS) only.

   The samples were run on a different instrument for Phosphorous.

3. All analyses were performed within the required holding times.

4. Please refer to the Sample Receipt Check List for sample discrepancies in LvLI's sample acceptance policy.

5. All Initial and Continuing Calibration Verifications (ICV/CCVs) were within the 90-110% control limits (80-120% for Mercury).

6. All Initial and Continuing Calibration Blanks (ICB/CCBs) were within control limits (less than the LOQ).

7. All preparation/method blanks (MB) were within method criteria (less than the Limit of Quantitation (3-10X the LOD), MB value less than 5% of the RCRA limit, or samples greater than 20X MB value). Refer to the Inorganics Method Blank Data Summary.

8. All ICP Interference Check Standards were within control limits.

9. All laboratory control samples (LCS) were within the 80-120% control limits. Refer to the Inorganics Laboratory Control Standards Report.

10. All matrix spike (MS) recoveries were within the 75-125% control limits. Refer to the Inorganics Accuracy Report.

11. All duplicate analyses were within the 20% Relative Percent Difference (RPD) control limits. Refer to the Inorganics Precision Report.

12. For the purposes of this report, the data has been reported to the Limit of Detection (LOD). Values between the LOD and the Limit of Quantitation (LOQ) are acquired in a region of less-certain quantification.

13. Soluble and total digestates were prepared within the same preparation batch and will be noted as such on the Inorganics Data Summary Report.

14. LvLI is NELAP accredited by the state of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

15. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

Iain Daniels

Date: 13 April 2009
To: Washington Closure Hanford (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA – Surface Water
Subject: PCB/Pesticide - Data Package No. K1421-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1421 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Anaysis
J17RJ1	10/29/08	Water	C	See note 1
J17RJ2	10/29/08	Water	C	See note 1
J17RJ3	10/29/08	Water	C	See note 1

1 – Pesticides by 8081A and PCBs by 8082.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

- **Holding Times & Sample Preservation**

Sample data were assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Samples must be extracted within 7 days of the date of sample collection and analyzed within 40 days from the date of extraction.

If holding times are exceeded by less than or equal to twice times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detected sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Method Blank**

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation or analysis. At least one method blank analysis must be conducted for every 20 samples. Method blanks should not contain target compounds at a concentration greater than required quantitation limit (RQL). If target compounds are present, sample results less than five times the blank concentration are qualified as undetected and flagged "U". If the sample result is less than five times the blank concentration and less than RQL, the result is qualified as undetected and elevated to the RQL.

All method blank results were acceptable.

Field Blanks

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike & Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Non-detected sample results with spike recoveries outside control limits are qualified as estimates and flagged "UJ". Sample results greater than five times the spike concentration require no qualification.

Due to the lack of a matrix spike, matrix spike duplicate or LCS analysis, all toxaphene results were qualified as estimates and flagged "J".

Due to matrix spike results outside QC limits, all pesticide results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Surrogate Recovery

The analysis of surrogate compounds provides a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the laboratory. When a surrogate compound recovery is outside the control window, all positively identified target compounds associated with the unacceptable surrogate recoveries are qualified as estimates and flagged "J". Non-detected compounds with surrogate recoveries less than the lower control limit are qualified as having an estimated detection limit and flagged "UJ". Non-detected compounds with surrogate recoveries above the upper control limit require no qualification.

All surrogate results were acceptable.

- **Precision**

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike/matrix spike duplicate results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed as the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. For soil samples, results must be within RPD limits of plus/minus 30%. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

Due to the lack of a matrix spike and matrix spike duplicate analysis, all toxaphene results were qualified as estimates and flagged "J".

Due to RPDs outside QC limits, all pesticide results were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the project specific RQLs to ensure that laboratory detection levels meet the required criteria. All results met the RQL.

- **Completeness**

Data Package No. K1421 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to the lack of a matrix spike, matrix spike duplicate or LCS analysis, all toxaphene results were qualified as estimates and flagged "J".
- Due to matrix spike results outside QC limits, all pesticide results were qualified as estimates and flagged "J".
- Due to RPDs outside QC limits, all pesticide results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the procedures herein are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

PESTICIDE/PCB DATA QUALIFICATION SUMMARY*

SDG: K1421	**REVIEWER: ELR**	**Project: RCBRA**	**PAGE _1_ OF _1_**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Toxaphene	J	All	No MS, MSD or LCS analysis
All pesticides	J	All	MS recovery & RPD

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Laboratory Narrative and Chain-of-Custody Documentation

LVLI
LIONVILLE LABORATORY INC.

Case Narrative

Client: WC-HANFORD RC-115
LVL #: 0810L175
SDG/SAF # K1421 / RC-115

W.O. #: 60049-001-001-0001-00
Date Received: 10-31-2008

PCB

Three (3) water samples were collected on 10-29-2008.

The samples and their associated QC samples were extracted on 11-05-2008 and analyzed according to Lionville Laboratory SOPs based on SW846, 3rd Edition procedures on 11-11-2008. The extraction procedure was based on method 3520C and the extracts were analyzed based on method 8082.

The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LVL) certifies that all test results meet the requirements of NELAC except as noted below:

1. Discrepancies from the Sample acceptance policy have been recorded on the Sample Receipt Checklist.
2. All samples were extracted and analyzed within hold time.
3. The sample and associated QC samples received Copper-Sulfur and Sulfuric Acid cleanups according to Lionville Laboratory SOPs based on SW846 methods 3660A and 3665A respectively.
4. The method blank was below the reporting limits for all target compounds.
5. All obtainable surrogate recoveries were within acceptance criteria.
6. All blank spike recoveries were within acceptance criteria.
7. All matrix spike recoveries were within acceptance criteria.
8. All initial calibrations associated with this data set were within acceptance criteria.
9. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.

[illegible]

The results presented in this report relate only to the analytical testing and conditions of the samples at receipt and during storage. All pages of this report are integral parts of the analytical data. Therefore, this report should only be reproduced in its entirety of 11 pages.

10. LVL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

11. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the laboratory manager or a designee, as verified by the following signature.

CHLORINATED PESTICIDES

Three (3) water samples were collected on 10-29-2008.

The samples and their associated QC samples were extracted on 11-05-2008 and analyzed according to Lionville Laboratory SOPs based on SW846, 3rd Edition procedures on 11-10,11-2008. The extraction procedure was based on method 3520C and the extracts were analyzed based on method 8081A.

The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. Discrepancies from the Sample Acceptance Policy have been recorded on the Sample Receipt checklist.
2. All required holding times for extraction and analysis have been met.
3. The method blank was below the reporting limits for all target compounds.
4. One (1) of fourteen (14) surrogate recoveries was outside acceptance criteria. However, the surrogate recovery acceptance criteria were met (i.e., no more than one outlier per sample).
5. One (1) of twenty (20) blank spike recoveries was outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR# 08GC153) has been enclosed.
6. Twenty (20) of forty (40) matrix spike recoveries were outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR# 08GC153) has been enclosed.
7. All initial calibrations associated with this data set were within acceptance criteria.
8. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.

Lionville Laboratory Sample Discrepancy Report (SDR)

SDR #: 08BC153

Initiator: CAC
Date: 11/16/08
Client: LOC-Hanford

Batch: 0810L175
Samples: 005M
Method: SW846/NCAWWGLP/

Parameter: Pest
Matrix: Water
Prep Batch: 08LE0559

1. Reason for SDR

a. COC Discrepancy
__ Tech Profile Error
__ Transcription Error
__ Client Request
__ Wrong Test Code
__ Sampler Error on C-O-C
__ Other ________

b. General Discrepancy
__ Missing Sample/Extract*
__ Hold Time Exceeded
__ Improper Bottle Type
__ Container Broken
__ Insufficient Sample*
__ Not Amenable to Analysis
__ Wrong Sample Pulled
__ Preservation Wrong
__ Label ID's Illegible
__ Received Past Hold

Note*: Verified by (Log-In) or (Prep Group) (circle)...signature/date: ________

c. Problem (include all relevant specific results; attach data if necessary)

all spike recoveries are low

BS/MSD are good

2. Known or Probable Causes(s)

Probable loss of extract during concentration as both surrogates and spikes are low.

3. Discussion and Proposed Action

Other Description:

__ Re-log
  __ Entire Batch
  __ Following Samples: ________
__ Re-leach
__ Re-extract
__ Re-digest
__ Revise EDD
__ Change Test Code to ________
__ Place On/Take Off Hold (circle)

Narrate
JD

4. Project Manager Instructions...signature/date: 12/1/08

✓ Concur with Proposed Action
__ Disagree with Proposed Action; See instruction
__ Include in Case Narrative
__ Client Contacted:
Date/Person ________
__ Add
__ Cancel

5. Final Action...signature/date: 11/4/08

Other Explanation:

Date: 13 April 2009
To: Washington Closure Hanford (technical representative)
From: ELR Consultants
Project: Columbia River Component of the RCBRA – Surface Water
Subject: Semivolatile - Data Package No. K1421-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1421prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Data
J17RJ1	10/29/08	Water	C	See note 1
J17RJ2	10/29/08	Water	C	See note 1
J17RJ3	10/29/08	Water	C	See note 1

1 – Semivolatiles by 8270C.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Holding Times & Sample Preservation

Analytical holding times were assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Samples must be extracted within 7 days of the date of sample collection and analyzed within 40 days from the date of extraction for semivolatile analytes.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Method Blanks**

Method blank analyses are conducted to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. Analytical results for analytes present in any sample at less than five times the concentration of that analyte found in the associated blank are qualified as non-detects and flagged "U". Common laboratory contaminants present in samples at less than ten times the concentration of that analyte found in the associated blank are qualified as non-detects. If a sample result is less than the CRQL and is less than five times (or less than ten times for lab contaminants) the highest associated blank result, the sample result value is raised to the CRQL level and qualified as undetected "U".

Due to method blank contamination, all detected di-n-butylphthalate and bis(2-ethylhexyl)phthalate results were qualified as undetected and flagged "U".

All other method blank results were acceptable.

<u>Field Blanks</u>

No field blanks were submitted for analysis.

- **Accuracy**

<u>Matrix Spike/Matrix Spike Duplicate & Blank Spike Recoveries</u>

Matrix spike/matrix spike duplicate analyses are used to assess the analytical accuracy of the reported data and the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike/matrix spike duplicate analyses are performed in duplicate using five compounds for which percent recoveries must be within a range of 50-150% or within laboratory control limits. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Undetected sample results with spike recoveries below control limits are qualified as estimates and flagged "UJ". Undetected sample results are not qualified if the spike recovery is above control limits. Sample results greater than five times the spike concentration require no qualification.

Due to matrix spike and/or matrix spike duplicate recoveries outside QC limits, all hexachloroethane (39%), bis(2-chloroethoxy)methane (8%), 4-chloroanaline (3%), 2-nitroanaline (37%), acenaphthylene (30%), 3-nitroanaline (5% & 0%), 4-nitroanaline (0%), n-nitrosodiphenylamine (16%), carbazole (17%) and 3,3'dochlorobenzidine (0% & 0%) results were qualified as estimates and flagged "J".

Due to LCS recoveries outside QC limits, all bis(2-chloroethoxy)methane (7%), 4-chloroanaline (0%), 2-nitroanaline (44%), 3-nitroanaline (0%), 4-nitroanaline (0%) and 3,3'-dichlorobenzidine (0%) results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Surrogate Recovery

The analyses of surrogate compounds provide a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the EPA CLP program. If two surrogates of the same class of compounds (base/neutral or acid) are out of control limits, all associated sample results greater than the contract required quantitation limit (CRQL) are qualified as estimates and flagged "J". Sample results less than the CRQL and below the lower control limit are qualified as estimates and flagged "UJ". Sample results less than the CRQL with recoveries above the upper control limit require no qualification. If a surrogate recovery is less than 10%, detects are qualified as estimates and flagged "J" and nondetects are rejected and flagged "UR".

All surrogate results were acceptable.

- **Precision**

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike (MS)/matrix spike duplicate (MSD) results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed by the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. Samples results must be within RPD limits of +/-20%. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

Due to RPDs outside QC limits, all bis(2-chloroethoxy)methane (154%), 4-chloroanaline (150%), 2-nitroanaline (59%), acenaphthylene (69%), 3-nitroanaline (200%), 4-nitroanaline (200%), n-nitrosodiphenylamine (72%) and carbazole (108%) results were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQL's) to ensure that laboratory detection levels meet the required criteria. Twenty-one analytes exceeded the RQL. Under the WCH statement of work, no qualification is required. All other analytes met the RQL.

- **Completeness**

Data package No. K1421 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES.

The following minor deficiencies were noted:

- Due to method blank contamination, all detected di-n-butylphthalate and bis(2-ethylhexyl)phthalate results were qualified as undetected and flagged "U".
- Due to matrix spike and/or matrix spike duplicate recoveries outside QC limits, all hexachloroethane (39%), bis(2-chloroethoxy)methane (8%), 4-chloroanaline (3%), 2-nitroanaline (37%), acenaphthylene (30%), 3-nitroanaline (5% & 0%), 4-nitroanaline (0%), n-nitrosodiphenylamine (16%), carbazole (17%) and 3,3'dochlorobenzidine (0% & 0%) results were qualified as estimates and flagged "J".
- Due to LCS recoveries outside QC limits, all bis(2-chloroethoxy)methane (7%), 4-chloroanaline (0%), 2-nitroanaline (44%), 3-nitroanaline (0%), 4-nitroanaline (0%) and 3,3'-dichlorobenzidine (0%) results were qualified as estimates and flagged "J".
- Due to RPDs outside QC limits, all bis(2-chloroethoxy)methane (154%), 4-chloroanaline (150%), 2-nitroanaline (59%), acenaphthylene (69%), 3-nitroanaline (200%), 4-nitroanaline (200%), n-nitrosodiphenylamine (72%) and carbazole (108%) results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Twenty-one analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the same quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

SEMIVOLATILE ORGANIC CHEMISTRY DATA QUALIFICATION SUMMARY*

SDG: K1421	**REVIEWER: ELR**	**Project: RCBRA**	**PAGE 1 OF 1**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
di-n-butylphthalate and bis(2-ethylhexyl)phthalate	U at RQL	All detects	Method blank contamination
Hexachloroethane bis(2-chloroethoxy)methane 4-chloroanaline 2-nitroanaline acenaphthylene 3-nitroanaline 4-nitroanaline n-nitrosodiphenylamine carbazole 3,3'dichlorobenzidine	J	All	MS/MSD recovery
bis(2-chloroethoxy)methane 4-chloroanaline 2-nitroanaline 3-nitroanaline 4-nitroanaline 3,3'-dichlorobenzidine	J	All	LCS recovery
bis(2-chloroethoxy)methane 4-chloroanaline 2-nitroanaline acenaphthylene 3-nitroanaline 4-nitroanaline n-nitrosodiphenylamine carbazole	J	All	RPD

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Laboratory Narrative and Chain-of-Custody Documentation

Case Narrative

Client: WC-HANFORD RC-115, K1421
LVL #: 0810L175

WO #: 60197-001-001-0001-00
Date Received: 10-31-2008

SEMIVOLATILE

Three (3) water samples were collected on 10-29-2008.

The samples and their associated QC samples were extracted according to Lionville Laboratory SOPs based on SW 846 method 3520C on 11-04-2008 and analyzed according to criteria set forth in Lionville Laboratory SOPs based on SW 846 Method 8270C for client specified Semivolatile target compounds on 11-07-2008.

The following is a summary of QC results accompanying the sample results. Lionville Laboratory (LVL) certifies that all test results meet the requirements of NELAC except as noted below:

1. Discrepancies from the sample acceptance policy have been recorded on the Sample Receipt Checklist.
2. Non-target compounds were detected in these samples.
3. All obtainable surrogate recoveries were within acceptance criteria.
4. Eleven (11) of one hundred twenty-eight (128) matrix spike recoveries were outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR) #08MS258 is enclosed.
5. Seven (7) of sixty-four (64) blank spike recoveries were outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR# 08MS258) has been enclosed.
6. The method blank contained the common laboratory contaminants Bis (2-Ethylhexy) phthalate and Di-n-butylphthalate at levels less than the CRQL.
7. All initial calibrations associated with this data set were within acceptance criteria.
8. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.
9. Internal standard area and retention time criteria were met.
10. Manual integrations are performed according to SOP QA-125 to produce quality data with the utmost integrity. All manual integrations are required to be technically valid and properly documented. Appropriate technical flags are defined in the Glossary ("Technical Flags For Manual Integration").

11. LVL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

12. I certify, that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data, contained in this hard-copy data package, has been authorized, by the Laboratory Manager or a designee, as verified by the following signature.

Judy Stone
Lois Daniels

Lionville Laboratory Sample Discrepancy Report (SDR) SDR #: 0fms 166

Initiator: Shamsylin
Date: 11-10-08
Client: Wellsford Rails 10194-1
Batch: 08I0L175
Samples: ms, msd, BS
Method: [✓ SW8270] MCAWW/CLP
Parameter: 8270
Matrix: Aqueous
Prep Batch: 08I1E801

1. Reason for SDR

a. COC Discrepancy
☐ Tech Profile Error
☐ Transcription Error
☐ Client Request
☐ Wrong Test Code
☐ Sampler Error on C-O-C
☐ Other ____

b. General Discrepancy
☐ Missing Sample/Extract*
☐ Hold Time Exceeded
☐ Improper Bottle Type
☐ Container Broken
☐ Insufficient Sample*
☐ Not Amenable to Analysis
☐ Wrong Sample Pulled
☐ Preservation Wrong
☐ Label ID's Illegible
☐ Received Past Hold

Note*: Verified by [Log-In] or [Prep Group] (circle)...signature/date: ____

c. Problem (Include all relevent specific results; attach data if necessary)

low or no spike recoveries ms, msd, BS

2. Known or Probable Causes(s) Nitroanilines, chloroanilines are subject to erratic chromatographic behavior especially if the GC system is contaminated with high boiling materials. Other spikes. All surrogates within acceptance criteria

3. Discussion and Proposed Action
☐ Re-log
  ☐ Entire Batch
  ☐ Following Samples: ____
☐ Re-leach
☐ Re-extract
☐ Re-digest
☐ Revise EDD
☐ Change Test Code to ____
☐ Place On/Take Off Hold (circle)

Other Description: none

11/10/08

4. Project Manager Instructions...signature/date: 11/19/08
☑ Concur with Proposed Action
☐ Disagree with Proposed Action; See Instruction
☐ Include in Case Narrative
☐ Client Contacted:
Date/Person ____ ____
☑ Add
☐ Cancel

5. Final Action...signature/date: ____
☑ Verified re-[log][leach][extract][digest][analysis] (circle)
☑ Included in Case Narrative
☐ Hard Copy COC Revised
☐ Electronic COC Revised
☐ EDD Corrections Completed

Other Explanation:

When Final Action has been recorded, forward original to QA for diposition.

Date: 13 April 2009
To: Washington Closure Hanford (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA – Surface Water
Subject: Wet Chemistry - Data Package No. K1421-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1421 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Data
J17RJ1	10/29/08	Water	C	See note 1
J17RJ2	10/29/08	Water	C	See note 1
J17RJ3	10/29/08	Water	C	See note 1

1 – Alkalinity by 310.1, hardness by 130.2 and soluble organic carbon by 415.1.
* - Sample temperature not validated per WCH.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times & Sample Preservation**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Samples must be analyzed within 6 months for hardness, 28 days for soluble organic carbon and 14 days for alkalinity.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding time and sample preservation results were acceptable.

- **Method Blanks**

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

Due to the lack of a matrix spike analysis, all alkalinity results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 20%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicate

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package No. K1421 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiency was noted:

- Due to the lack of a matrix spike analysis, all alkalinity results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

WET CHEMISTRY DATA QUALIFICATION SUMMARY*

SDG: K1421	**REVIEWER:** ELR	**Project:** RCBRA	**PAGE 1 OF 1**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Alkalinity	J	All	No MS analysis

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Laboratory Narrative and Chain-of-Custody Documentation

LvLI
LIONVILLE LABORATORY INC.

Analytical Report

Client: WC-HANFORD RC-115 K1421
LVL#: 0810L175

W.O.#: 60049-001-001-0001-00
Date Received: 10-31-08

INORGANIC NARRATIVE

1. This narrative covers the analyses of 3 water samples.

2. The samples were prepared and analyzed in accordance with the methods checked on the attached glossary. On the Inorganic Data Summary Report, Soluble Organic Carbon represents the client requested Dissolved Organic Carbon (DOC).

   Lionville Lab (LvL) is NELAP accredited by the State of Pennsylvania. For a complete list of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager. LvL certifies that all test results meet the requirements of NELAC with any exception noted in the following statements.

3. Sample holding times as required by the method and/or contract were met.

4. The results presented in this report are derived from samples that met LvL's sample acceptance policy with the exception of DOC as noted on the Sample Receipt Checklist.

5. The method blanks were within the method criteria with the exception of Hardness that was above the 0.50 mg/L reporting limit at 0.52 mg/L; the associated Hardness results are greater than 10 times the reporting limit.

6. The Laboratory Control Samples (LCS) were within the laboratory control limits. The duplicate LCS were within the 20% Relative Percent Difference (RPD) control limit.

7. The matrix spike recoveries were within the 75-125% control limits.

8. The replicate analyses were within the 20% RPD control limit.

9. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard copy package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

Subject: Wet Chemistry - Data Package No. J00253-TAL

INTRODUCTION

This memo presents the results of data validation on Data Package No. J00253 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J17VR1	12/8/08	Solid	C	See note 1
J17YT9	12/8/08	Solid	C	See note 1
J18007	12/8/08	Solid	C	See note 1
J18008	12/8/08	Solid	C	See note 1
J18009	12/8/08	Solid	C	See note 1
J18010	12/8/08	Solid	C	See note 1
J18011	12/8/08	Solid	C	See note 1
J18025	12/8/08	Solid	C	See note 1
J18026	12/8/08	Solid	C	See note 1

1 – Chromium VI by 7196A.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

Holding Times

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 24 hours for chromium VI.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

Due to the holding time being exceeded by less than twice the limit, all chromium VI results were qualified as estimates and flagged "J".

- **Method Blanks**

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

Due to a matrix spike recovery outside QC limits (63%), all chromium VI results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicate

One set of field duplicate samples (J17VR1/J18008) were submitted for analysis. Laboratory duplicates are compared using the same criteria as for laboratory duplicates. All field duplicate results were acceptable.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package J00253 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to a matrix spike recovery outside QC limits (63%), all chromium VI results were qualified as estimates and flagged 'J'.

- Due to the holding time being exceeded by less than twice the limit, all chromium VI results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

Sample Type	:	Water
SDG Number	:	J00253
Data Deliverable	:	45-Day / Summary

CASE NARRATIVE

I. Introduction

On December 9, 2008 nine water samples were received at TestAmerica for chemistry analysis. Upon receipt, the samples were assigned the following laboratory ID number to correspond with the Washington Closure Hanford (WCH) specific ID:

WCH ID#	TARL ID#	MATRIX	DATE OF RECEIPT
J18010	K4A96	OTHER SOLID	12/09/08
J18011	K4A95	OTHER SOLID	12/09/08
J18008	K4A94	OTHER SOLID	12/09/08
J18026	K4A90	OTHER SOLID	12/09/08
J18007	K4A9R	OTHER SOLID	12/09/08
J18025	K4A9L	OTHER SOLID	12/09/08
J18009	K4A9G	OTHER SOLID	12/09/08
J17VR1	K4A89	OTHER SOLID	12/09/08
J17YT9	K4A87	OTHER SOLID	12/09/08

II. Sample Receipt

The samples were received in good condition and no anomalies were noted during check-in.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors. The requested analyses were:

Chemical Analysis
Hexavalent Chromium by EPA method 7196A

IV. Quality Control

The analytical results for each analysis performed includes a minimum of one laboratory control sample (LCS), one method (reagent) blank, and one duplicate sample analysis. Any exceptions have been noted in the "Comments" section.

QC and sample results are reported in the same units.

V. Comments

Chemical Analysis
Hexavalent Chromium by EPA method 7196A:
The matrix spike recovered slightly low at 62.55%. Consequent post digestive matrix spike recovered at 94.06% and the insoluble matrix spike recovered at 93.17%. This implies a possible amount of reducing capacity in the sample, but not enough to exhaust the more copious insoluble matrix spikes.

Except as noted, the LCS, batch blank, sample, sample duplicate (J17YT9), sample matrix spike (J17YT9) and sample matrix spike duplicate (J17YT9) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

Project: Columbia River Component of the RCBRA – Sediment
Subject: Wet Chemistry - Data Package No. J00322-TAL

INTRODUCTION

This memo presents the results of data validation on Data Package No. J00322 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J17V97	2/3/09	Solid	C	See note 1
J17V98	2/3/09	Solid	C	See note 1
J17V99	2/3/09	Solid	C	See note 1

J181B6	2/3/09	Solid	C	See note 1
J181B7	2/3/09	Solid	C	See note 1
J181B8	2/3/09	Solid	C	See note 1
J181B9	2/3/09	Solid	C	See note 1

1 – Chromium VI by 7196A.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

Holding Times

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as

follows: Soil samples must be analyzed within 24 hours for chromium VI.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

Due to the holding time being exceeded by less than twice the limit, all chromium VI results were qualified as estimates and flagged "J".

- **Method Blanks**

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

Due to a matrix spike recovery outside QC limits (37%), all chromium VI results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicate

One set of field duplicate samples (J17VR2/J18181) were submitted for analysis. Laboratory duplicates are compared using the same criteria as for laboratory duplicates. All field duplicate results were acceptable.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package J00322 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to a matrix spike recovery outside QC limits (37%), all chromium VI results were qualified as estimates and flagged "J".

- Due to the holding time being exceeded by less than twice the limit, all chromium VI results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

CHROMIUM VI DATA QUALIFICATION SUMMARY*

THE LEADER IN ENVIRONMENTAL TESTING

Certificate of Analysis

Washington Hanford Closure
2620 Fermi Avenue
Richland, WA 99354

March 23, 2009

Attention: Joan Kessner

SAF Number : RC-116
Date SDG Closed : February 4, 2009
Number of Samples : Fifteen (15)
Sample Type : Other Solid
SDG Number : J00322
Data Deliverable : 45-Day / Summary

CASE NARRATIVE

I. Introduction

On February 4, 2009 fifteen other solid samples were received at TestAmerica for chemistry analysis. Upon receipt, the samples were assigned the following laboratory ID number to correspond with the Washington Closure Hanford (WCH) specific ID:

WCH ID#	TARL ID#	MATRIX	DATE OF RECEIPT
J181B6	K6N6J	OTHER SOLID	2/04/09
J181B5	K6N6V	OTHER SOLID	2/04/09
J181B9	K6N6Q	OTHER SOLID	2/04/09
J181B8	K6N6P	OTHER SOLID	2/04/09
J181B7	K6N6L	OTHER SOLID	2/04/09
J17VR2	K6N6K	OTHER SOLID	2/04/09
J18181	K6N6G	OTHER SOLID	2/04/09
J17VB0	K6N6E	OTHER SOLID	2/04/09
J17V99	K6N6C	OTHER SOLID	2/04/09
J17VB1	K6N59	OTHER SOLID	2/04/09
J17V98	K6N58	OTHER SOLID	2/04/09
J17V97	K6N55	OTHER SOLID	2/04/09

J17VR7	K6N53	OTHER SOLID	2/04/09
J17VB2	K6N5X	OTHER SOLID	2/04/09
J181B4	K6N5V	OTHER SOLID	2/04/09

II. Sample Receipt

The sample was received in good condition and no anomalies were noted during check-in.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors. The requested analyses were:

Chemical Analysis
Hexavalent Chromium by EPA method 7196A

IV. Quality Control

The analytical results for each analysis performed includes a minimum of one laboratory control sample (LCS), one method (reagent) blank, and one duplicate sample analysis. Any exceptions have been noted in the "Comments" section.

QC and sample results are reported in the same units.

V. Comments

Chemical Analysis

Hexavalent Chromium by EPA method 7196A:
The matrix spike recovered low at 38.75%. The post digestive matrix spike recovered at 93.05% and the insoluble matrix spike recovered at 86.07%. This implies a possible amount of reducing capacity in the sample, but not enough to exhaust the more copious insoluble matrix spike. Except as noted, the LCS, batch blank, sample, sample duplicate (J181B4) and sample matrix spike (J181B4) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

INTRODUCTION

This memo presents the results of data validation on Data Package No. J00337 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J17X06	2/12/09	Solid	C	See note 1
J18626	2/12/09	Solid	C	See note 1
J187B4	2/12/09	Solid	C	See note 1
J187B5	2/12/09	Solid	C	See note 1

1 – Chromium VI by 7196A.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

Holding Times

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as

follows: Soil samples must be analyzed within 24 hours for chromium VI.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Method Blanks**

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

Due to a matrix spike recovery outside QC limits (44%), all chromium VI results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicate

One set of field duplicates (J18626/J18785) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All field duplicate results were acceptable.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package J00337 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to a matrix spike recovery outside QC limits (44%), all chromium VI results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

Data Deliverable	:	45-Day / Summary

CASE NARRATIVE

I. Introduction

On February 12, 2009 fifteen other solid samples were received at TestAmerica for chemistry analysis. Upon receipt, the samples were assigned the following laboratory ID number to correspond with the Washington Closure Hanford (WCH) specific ID:

WCH ID#	TARL ID#	MATRIX	DATE OF RECEIPT
J187C0	K65HK	OTHER SOLID	2/12/09
J18626	K65HE	OTHER SOLID	2/12/09
J187B5	K65HD	OTHER SOLID	2/12/09
J187B4	K65HC	OTHER SOLID	2/12/09
J187B9	K65HA	OTHER SOLID	2/12/09
J187B8	K65G9	OTHER SOLID	2/12/09
J187B6	K65G7	OTHER SOLID	2/12/09
J17X06	K65G3	OTHER SOLID	2/12/09
J187B7	K65G2	OTHER SOLID	2/12/09
J187F2	K65G1	OTHER SOLID	2/12/09
J187H0	K65G0	OTHER SOLID	2/12/09
J187F4	K65GX	OTHER SOLID	2/12/09

J187H1	K65GV	OTHER SOLID	2/12/09
J187F5	K65GR	OTHER SOLID	2/12/09
J187F8	K65GP	OTHER SOLID	2/12/09

II. Sample Receipt

The sample was received in good condition and no anomalies were noted during check-in.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors. The requested analyses were:

Chemical Analysis
Hexavalent Chromium by EPA method 7196A

IV. Quality Control

The analytical results for each analysis performed includes a minimum of one laboratory control sample (LCS), one method (reagent) blank, and one duplicate sample analysis. Any exceptions have been noted in the "Comments" section.

QC and sample results are reported in the same units.

V. Comments

Chemical Analysis
Hexavalent Chromium by EPA method 7196A:
The matrix spike recovered low at 44%. The post digestive matrix spike recovered at 91% and the insoluble matrix spike recovered at 79%. This implies a possible amount of reducing capacity in the sample, but not enough to exhaust the more copious insoluble matrix spike. Except as noted, the LCS, batch blank, sample, sample duplicate (J187F8) and sample matrix spike (J187F8) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

Project: Columbia River Component of the RCBRA – Sediment
Subject: Wet Chemistry - Data Package No. J00350-TAL

INTRODUCTION

This memo presents the results of data validation on Data Package No. J00350 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J18995	2/19/09	Solid	C	See note 1
J18996	2/19/09	Solid	C	See note 1
J18997	2/19/09	Solid	C	See note 1

1 – Chromium VI by 7196A

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- Holding Times

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as

follows; Soil samples must be analyzed within 24 hours for chromium VI

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Method Blanks**

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

Due to a matrix spike recovery outside QC limits (1%), all chromium VI results were qualified as rejected and flagged "R".

All other accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicate

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package J00350 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 0%.

MAJOR DEFICIENCIES

The following major deficiency was noted:

- Due to a matrix spike recovery outside QC limits (1%), all chromium VI results were qualified as rejected and flagged "R".

Rejected data is unusable and should not be reported.

MINOR DEFICIENCIES

None found.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

Data Deliverable : 45-Day / Summary

CASE NARRATIVE

I. Introduction

On February 19, 2009 sixteen other solid samples were received at TestAmerica for chemistry analysis. Upon receipt, the samples were assigned the following laboratory ID numbers to correspond with the Washington Closure Hanford (WCH) specific IDs:

WCH ID#	TARL ID#	MATRIX	DATE OF RECEIPT
J189D3	K7FX2	OTHER	2/19/09
J18997	K7FX3	OTHER	2/19/09
J189F4	K7FX7	OTHER	2/19/09
J18996	K7FX8	OTHER	2/19/09
J18995	K7F0A	OTHER	2/19/09
J189C6	K7F0C	OTHER	2/19/09
J189C5	K7F0D	OTHER	2/19/09
J18998	K7F0G	OTHER	2/19/09
J189F3	K7F0J	OTHER	2/19/09
J189F5	K7F0T	OTHER	2/19/09
J189B1	K7F05	OTHER	2/19/09
J189B2	K7F1D	OTHER	2/19/09
J189B0	K7F1R	OTHER	2/19/09

J189D1	K7F17	OTHER	2/19/09
J189D4	K7F2F	OTHER	2/19/09
J189D0	K7F2V	OTHER	2/19/09

II. Sample Receipt

The sample was received in good condition and no anomalies were noted during check-in.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors. The requested analyses were:

Chemical Analysis
Hexavalent Chromium by EPA method 7196A

IV. Quality Control

The analytical results for each analysis performed includes a minimum of one laboratory control sample (LCS), one method (reagent) blank, and one duplicate sample analysis. Any exceptions have been noted in the "Comments" section.

QC and sample results are reported in the same units.

V. Comments

Chemical Analysis
Hexavalent Chromium by EPA method 7196A:
The matrix spike recovered below the MDL. The post digestive matrix spike recovered at 68% and the insoluble matrix spike recovered at 89%. This implies a possible amount of reducing capacity in the sample, but not enough to exhaust the more copious insoluble matrix spike. Except as noted, the LCS, batch blank, sample, sample duplicate (J189D3) and sample matrix spike (J189D3) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

SAF-RC-116
Columbia River Component of the RCBRA – Sediment
FINAL VALIDATION PACKAGE

COMPLETE COPY OF VALIDATION PACKAGE TO:

Kathy Wendt H4-21

COMMENTS:

SDG K1489 **SAF-RC-116**

Date: 18 November 2009
To: Washington Closure Hanford Inc. (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA -- Sediment
Subject: Radiochemistry - Data Package No. K1489-EB

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1489 prepared by Eberline Services (EB). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Anaysis
J17VN9	12/8/08	Solid	C	See note 1
J17XK6	12/8/08	Solid	C	See note 1
J17XK7	12/8/08	Solid	C	See note 1
J17XK8	12/8/08	Solid	C	See note 1
J17YT4	12/8/08	Solid	C	See note 1

J18003	12/8/08	Solid	C	See note 1
J18004	12/8/08	Solid	C	See note 1
J18005	12/8/08	Solid	C	See note 1
J18006	12/8/08	Solid	C	See note 1
J18016	12/8/08	Solid	C	See note 1
J18017	12/8/08	Solid	C	See note 1

1 – Carbon-14, total strontium, technetium-99, alpha spectroscopy and gamma spectroscopy.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Holding times are calculated from Chain-of-Custody forms to determine the validity of the results. The maximum holding time for radiochemical analysis is 6 months.

All holding times were acceptable.

- **Preparation (Method) Blanks**

Laboratory Blanks

Blank samples are analyzed to determine if positive results are due to laboratory reagent, sample container, or detector contamination. If blank analysis results indicate the presence of an analyte above the minimum detectable activity (MDA), the following qualifiers are applied: All positive sample results less than five times the highest blank concentration are qualified as estimates and flagged "J"; sample results below the MDA are qualified as undetected and flagged "U"; sample results above the MDA and greater than five times the highest blank concentration are not qualified.

All blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis

- **Accuracy**

Accuracy is evaluated from laboratory control sample (LCS) or blank spike sample (BSS) batch samples and spiked samples from the analytical batch. Measured activities are compared to the known added amounts. The acceptable LCS or BSS and matrix spike (MS) recovery range is 70-130%. In addition, samples may be spiked with a radiochemical tracer to assist in isolating the radioisotope of interest with the yield of the tracer being used in calculating sample activity. The acceptable range for tracer recovery is 20% to 105%. Spike sample results outside the above ranges result in associated sample results being qualified as estimates, or not qualified, depending on the activity of the individual sample. Results are rejected for LCS/BSS recoveries of less than 30% and tracer recoveries of less than 20%, and tracer recoveries of greater than 115% for detected results.

Due to the lack of an LCS analysis, all thorium-228 (aspec) and thorium-232 (aspec) results were qualified as estimates and flagged "J".

Due to the lack of a matrix spike analysis, all carbon-14 results were qualified as estimates and flagged "J"

Due to a radiochemical yield outside QC limits (106%), the thorium-228 (aspec), thorium-230 (aspec) and thorium-232 (aspec) results in sample J17XK8 were qualified as estimates and flagged "J".

Due to a radiochemical yield outside QC limits (113%), the thorium-230 (aspec) and thorium-232 (aspec) results in sample J18016 were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

- **Laboratory Duplicates**

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the contract required detection limit (CRDL) and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All duplicate results were acceptable.

Field Duplicates

One set of field duplicates (J18003/J17VN9) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All field duplicates results were acceptable.

- **Detection Levels**

Reported analytical detection levels for undetected analytes are compared against the project RQLs to ensure that laboratory detection levels meet the required criteria. One analytes exceeded the RQL. Under the WCH statement of work, no qualification is required. All other analytes met the RQL.

Completeness

Data package No. K1489 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiency was noted:

- Due to the lack of an LCS analysis, all thorium-228 (aspec) and thorium-232 (aspec) results were qualified as estimates and flagged "J".
- Due to the lack of a matrix spike analysis, all carbon-14 results were qualified as estimates and flagged "J".
- Due to a radiochemical yield outside QC limits (106%), the thorium-228 (aspec), thorium-230 (aspec) and thorium-232 (aspec) results in sample J17XK8 were qualified as estimates and flagged "J".
- Due to a radiochemical yield outside QC limits (113%), the thorium-230 (aspec) and thorium-232 (aspec) results in sample J18016 were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

One analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH statement of work are as follows:

U - Indicates the compound or analyte was analyzed for and not detected above the minimum detectable activity (MDA) in the sample. The value reported is the sample result corrected for sample dilution and moisture content by the laboratory. The data is usable for decision making purposes.

UJ - Indicates the compound or analyte was analyzed for and not detected at concentrations above the minimum detectable activity (MDA) in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate, but is usable for decision making purposes.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

Appendix 2

Summary of Data Qualification

RADIOCHEMISTRY DATA QUALIFICATION SUMMARY*

SDG: K1489	**REVIEWER: ELR**	**Project: RCBRA**	**QC Issue**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Thorium-228 Thorium-232	J	All	No LCS analysis
Carbon-14	J	All	No MS analysis
Thorium-228 Thorium-230 Thorium-232	J	J17XK8	Radiochemical yield
Thorium-230 Thorium-232	J	J18016	Radiochemical yield

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Laboratory Narrative and Chain-of-Custody Documentation

1.0 GENERAL

Washington Closure Hanford (WCH) Sample Delivery Group K1489 was composed of seventeen solid (other solid) samples designated under SAF No. RC-116 with a Project Designation of: Columbia River Component of the RCBRA – Sediment.

The samples were received as stated on the Chain-of-Custody documents. Any discrepancies are noted on the Eberline Analytical Sample Receipt Checklist. The results were sent to WCH via e-mail February 4, 2009.

2.0 ANALYSIS NOTES

2.1 Carbon-14 Analysis

No problems were encountered during the course of the analyses.

2.2 Strontium-90 Analysis

No problems were encountered during the course of the analyses

2.3 Technetium-99 Analysis

No problems were encountered during the course of the analyses.

2.4 Isotopic Thorium Analysis

The Th-229 tracer yield for samples J17XK8 (106%) and J18016 (113%) were greater than the upper control limit of 105%; no other problems were encountered during the course of the analyses.

2.5 Isotopic Uranium Analysis

No problems were encountered during the course of the analyses.

2.6 Isotopic Plutonium Analysis

No problems were encountered during the course of the analyses.

2.7 Gamma Spectroscopy

No problems were encountered during the course of the analyses.

3.0 Case Narrative Certification Statement

"I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data obtained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

Melissa C. Mannion

Solid

1. Completeness ☐ N/A

Technical verification forms present? Yes [✓ No] N/A

Comments:

2. Initial Calibration (Levels D, E) ☒ N/A

Instruments/detectors calibrated? Yes No N/A

Initial calibration acceptable? Yes No N/A

Standards NIST traceable? Yes No N/A

Standards Expired? Yes No N/A

Calculation check acceptable? Yes No N/A

Comments:

3. Continuing Calibration (Levels D, E) ☒ N/A

Calibration checked within required frequency? .... Yes No N/A

Calibration check acceptable? .... Yes No N/A

Calibration check standards traceable? .... Yes No N/A

Calibration check standards expired? .... Yes No N/A

Calculation check acceptable? .... Yes No N/A

Comments:

4. Background Counts (Levels D, E) .... ☒ N/A

Background Counts checked within required frequency? .... Yes No N/A

Background Counts acceptable? .... Yes No N/A

Calculation check acceptable? .... Yes No N/A

Comments:

5. Blanks (Levels B, C, D, E) .... ☐ N/A

Method blank analyzed within required frequency? .... [✓ Yes] No N/A

Method blank results acceptable? .... [✓ Yes] No N/A

Analytes detected in method blank? .... Yes [✓ No] N/A

Field blank(s) analyzed? .... Yes [✓ No] N/A

Field blank results acceptable? .... Yes No [✓ N/A]

Analytes detected in field blank(s)? .... Yes No [✓ N/A]

Transcription/Calculation Errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: no FB

6. Laboratory Control Samples or Blank Spike Samples (Levels C, D, E) .... ☐ N/A

LCS/BSS analyzed within required frequency? .... [✓ Yes] No N/A

LCS/BSS recoveries acceptable? .... [✓ Yes] No N/A

LCS/BSS traceable? (Levels D,E) .... Yes No [✓ N/A]

LCS/BSS expired? (Levels D,E) .... Yes No [✓ N/A]

LCS/BSS levels correct? (Levels D,E) .... Yes No [✓ N/A]

Transcription/Calculation Errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: no th 229 or th 232 - LCS (cs/pro)

7. Chemical Carrier Recovery (Levels C, D, E) .... ☒ N/A

Chemical carrier added? .... Yes No N/A

Chemical recovery acceptable? .... Yes No N/A

Chemical carrier traceable? (Levels D, E) .... Yes No N/A

Chemical carrier expired? (Levels D, E) .... Yes No N/A

Transcription/Calculation errors? (Levels D, E)..................................... Yes No N/A

Comments:

8. Tracer Recovery (Levels C, D, E) .... ☐ N/A

Tracer added? .... [✓ Yes] No N/A

Tracer recovery acceptable? .... Yes [✓ No] N/A

Tracer traceable? (Levels D, E) .... Yes No [✓ N/A]

Tracer expired? (Levels D, E)... Yes No [✓ N/A]

Transcription/Calculation errors? (Levels D, E)....................................... Yes No [✓ N/A]

Comments: thorium (expire) K8 (106%) + B16 (117%) - J detects

9. Matrix Spikes (Levels C, D, E)... ☐ N/A

Matrix spike analyzed? .... Yes [✓ No] N/A

Spike recoveries acceptable? .... Yes No [✓ N/A]

Spike source traceable? (Levels D, E) .... Yes No [✓ N/A]

Spike source expired? Levels D, E)... Yes No [✓ N/A]

Transcription/Calculation Errors? (Levels D, E).. Yes No [✓ N/A]

Comments: NO C-14 MS - J calf

10. Duplicates (Levels C, D, E) ☐ N/A

Duplicates Analyzed at required frequency? [✓ Yes] No N/A

RPD Values Acceptable? [✓ Yes] No N/A

Transcription/Calculation Errors? (Levels D, E) Yes No [✓ N/A]

Comments:

11. Field QC Samples (Levels C, D E) ☐ N/A

Field duplicate sample(s) analyzed? [✓ Yes] No N/A

Field duplicate RPD values acceptable? [✓ Yes] No N/A

Field split sample(s) analyzed? Yes [✓ No] N/A

Field split RPD values acceptable? Yes No [✓ N/A]

Performance audit sample(s) analyzed? Yes [✓ No] N/A

Performance audit sample results acceptable? Yes No [✓ N/A]

Comments: no FS or PAS

FD - 03/N9

12. Holding Times (All levels)

Are sample holding times acceptable? [✓ Yes] No N/A

Comments:

13. Results and Detection Limits (All Levels) .... ☐ N/A

Results reported for all required sample analyses? .... [✓ Yes] No N/A

Results supported in raw data? (Levels D, E) .... Yes No [✓ N/A]

Results Acceptable? (Levels D, E) .... Yes No [✓ N/A]

Transcription/Calculation errors? (Levels D, E) .... Yes No [✓ N/A]

MDA's meet required detection limits? .... Yes [✓ No] N/A

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: one analyte out

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1489 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Anaysis
J18002	12/8/08	Solid	C	See note 1
J18003	12/8/08	Solid	C	See note 1
J18016	12/8/08	Solid	C	See note 1

J17YV9	12/8/08	Solid	C	See note 1

1 – Volatiles by 8260C & diesel range organics by 8015B

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1 Glossary of Data Reporting Qualifiers
Appendix 2 Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4 Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY OBJECTIVES

Holding Times & Sample Preservation

Analytical holding times were assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Samples must be extracted within 14 days of the date of sample collection and analyzed within 40 days from the date of extraction.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

Due to the holding time being exceeded by less than twice the limit, all diesel range organic and motor oil results were qualified as estimates and flagged "J".

All other holding times were acceptable.

Method Blanks

Method blank analyses are conducted to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. Analytical results for analytes present in any sample at less than five times the concentration of that analyte found in the associated blank are qualified as non-detects and flagged "U". Common laboratory contaminants present in samples at less than ten times the concentration of that analyte found in the associated blank are qualified as non-detects. If a sample result is less than the CRQL and is less than five times (or less than ten times for lab contaminants) the highest associated blank result, the sample result value is raised to the CRQL level and qualified as undetected "U".

Due to method blank contamination, all motor oil results were qualified as undetected and flagged "U".

All other method blank results were acceptable.

Field Blanks

No field blanks were submitted for analysis.

Accuracy

Matrix Spike/Matrix Spike Duplicate & Blank Spike Recoveries

Matrix spike/matrix spike duplicate analyses are used to assess the analytical accuracy of the reported data and the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike/matrix spike duplicate analyses are performed in duplicate using five compounds for which percent recoveries must be within a range of 50-150% or within laboratory control limits. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J" Undetected sample results with spike recoveries below control limits are qualified as estimates and flagged "UJ" Undetected sample results are not qualified if the spike recovery is above control limits. Sample results greater than five times the spike concentration require no qualification.

Due to the lack of a matrix spike, matrix spike duplicate and LCS analysis, all motor oil results were qualified as estimates and flagged "J".

Due to matrix spike results outside QC limits, all 2,4-dichlorophenol (49%), 1,2,4-trichlorobenzene (48%), 4-chloroanaline (12%), 4-chloro-3-methylphenol (49%), hexachlorocyclopentadiene (25%), 2,4,6-trichlorophenol (49%), 3 nitroanaline (31%), 4-nitroanaline (46%), pentachlorophenol (48%) and 3,3-dichlorobenzidine (0%) results were qualified as estimates and flagged "J".

Due to a matrix spike duplicate result outside QC limits, all 1,2,4-trichlorobenzene (49%), 4-chloroanaline (15%), 4-chloro-3-methylphenol (48%), hexachlorocyclopentadiene (10%), 2,4,6-trichlorophenol (46%), 3-nitroanaline (35%), pentachlorophenol (32%) and 3,3-dichlorobenzidine (0%) results were qualified as estimates and flagged "J".

Due to an LCS recovery outside QC limits, all 4-chloroanaline (30%), 3-nitroanaline (41%) and 3,3-dichlorobenzidene (44%) results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Surrogate Recovery

The analyses of surrogate compounds provide a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the EPA CLP program. If two surrogates of the same class of compounds (base/neutral or acid) are out of control limits, all associated sample results greater than the contract required quantitation limit (CRQL) are qualified as estimates and flagged "J". Sample results less than the CRQL and below the lower control limit are qualified as estimates and flagged "UJ". Sample results less than the CRQL with recoveries above the upper control limit require no qualification. If a surrogate recovery is less than 10%, detects are qualified as estimates and flagged "J" and nondetects are rejected and flagged "UR".

Due to a surrogate recovery outside QC limits, the motor oil result in samples J18002, J18003, J17VN9 and J17YT4 were qualified as estimates and flagged "J".

All other surrogate results were acceptable.

- **Precision**

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike (MS)/matrix spike duplicate (MSD) results provide matrix specific information on the precision of the method for specific target compound classes. Precision is expressed by the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. Samples results must be within RPD limits of +/-30%. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

Due to the lack of a matrix spike and matrix spike duplicate analysis, all motor oil results were qualified as estimates and flagged "J".

Due to RPDs outside QC limits, all hexachlorcylcopentadiene (90%), 4-nitrophenol (33%), pentachlorophenol (39%) and 3,3-dichlorobenzidine (no RPD) were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

One set of field duplicates (J18003/J17VN9) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All field duplicates results were acceptable.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQL's) to ensure that laboratory detection levels meet the required criteria. Four-hundred seventy-two analytes exceeded the RQL. Under the WCH statement of work, no qualification is required. All other analytes exceeded the RQL.

- **Completeness**

Data package No. K1469 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to the holding time being exceeded by less than twice the limit, all diesel range organic and motor oil results were qualified as estimates and flagged "J".
- Due to method blank contamination, all motor oil results were qualified as undetected and flagged "U".
- Due to the lack of a matrix spike, matrix spike duplicate and LCS analysis, all motor oil results were qualified as estimates and flagged "J".
- Due to matrix spike results outside QC limits, all 2,4-dichlorophenol (49%), 1,2,4-trichlorobenzene (48%), 4-chloroanaline (12%), 4-chloro-3-methylphenol (49%), hexachlorocyclopentadiene (25%), 2,4,6-trichlorophenol (49%), 3-nitroanaline (31%), 4-nitroanaline (46%), pentachlorophenol (48%) and 3,3-dichlorobenzidine (0%) results were qualified as estimates and flagged "J".
- Due to a matrix spike duplicate result outside QC limits, all 1,2,4-trichlorobenzene (49%), 4-chloroanaline (15%), 4-chloro-3-methylphenol (48%), hexachlorocyclopentadiene (10%), 2,4,6-trichlorophenol (46%), 3-nitroanaline (35%), pentachlorophenol (32%) and 3,3-dichlorobenzidine (0%) results were qualified as estimates and flagged "J".
- Due to an LCS recovery outside QC limits, all 4-chloroanaline (30%), 3-nitroanaline (41%) and 3,3-dichlorobenzidene (44%) results were qualified as estimates and flagged "J".
- Due to a surrogate recovery outside QC limits, the motor oil result in samples J18002, J18003, J17VN9 and J17YT4 were qualified as estimates and flagged "J".
- Due to RPDs outside QC limits, all hexachlorcylcopentadiene (90%), 4-nitrophenol (33%), pentachlorophenol (39%) and 3,3-dichlorobenzidine (no RPD) were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Four-hundred seventy-two analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH validation SOW are as follows

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the same quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes)

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

SEMIVOLATILE/DRO ORGANIC DATA QUALIFICATION SUMMARY*

SDG: K1489	**REVIEWER: ELR**	**Project: RCBRA**	**QC Issue**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Motor Oil	U	All	Method blank contamination
Diesel range organics Motor oil	J	All	Hold time
Motor Oil	J	All	No MS, MSD or LCS analysis
2,4-dichlorophenol 1,2,4-trichlorobenzene 4-chloroanaline 4-chloro-3-methylphenol hexachlorocyclopentadiene 2,4,6-trichlorophenol 3-nitroanaline 4-nitroanaline pentachlorophenol 3,3-dichlorobenzidine	J	All	MS recovery
1,2,4-trichlorobenzene 4-chloroanaline 4-chloro-3-methylphenol hexachlorocyclopentadiene 2,4,6-trichlorophenol 3-nitroanaline pentachlorophenol 3,3-dichlorobenzidine	J	All	MSD recovery
4-chloroanaline 3-nitroanaline 3,3-dichlorobenzidene	J	All	LCS recovery
Motor oil	J	J18002, J18003 J17VN9, J17YT4	Surrogate recovery
Hexachlorcylcopentadiene 4-nitrophenol pentachlorophenol 3,3-dichlorobenzidine	J	All	RPD

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Laboratory Narrative and Chain-of-Custody Documentation

Case Narrative

Client: WC-HANFORD RC 116
LVL #: 0812053
SDG/SAF#: K1487/RC-116

W.O. #: 60049-001-001-0001-00
Date Received: 12-10-2008

SEMIVOLATILE

One (1) solid sample was collected on 12-08-2008

The sample and its associated QC samples were extracted according to Lionville Laboratory SOPs based on SW 846 method 3540C on 12-19-2008 and analyzed according to criteria set forth in Lionville Laboratory SOPs based on SW 846 Method 8270C for TCL Semivolatile target compounds on 01-24,25-2009.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise. The following is a summary of QC results accompanying the sample results. Lionville Laboratory (LVL) certifies that all test results meet the requirements of NELAC except as noted below:

1. All results presented in this report are derived from samples that met LvL's sample acceptance policy.
2. The sample was extracted and analyzed within holding time.
3. Non-target compounds were detected in these samples.
4. Samples J18016, J18017, J17VN9, J17YT4 and J17YV9 required a 2-fold dilution and samples J17YT5 and J17YV8 required a 3-fold dilution. All dilutions were due to matrix (dark).
5. All obtainable surrogate recoveries were within acceptance criteria.
6. Nineteen (19) of one hundred twenty-eight (128) matrix spike recoveries were outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR# 09MS025) has been enclosed.
7. All blank spike recoveries were within acceptance criteria.
8. The method blank contained the common laboratory contaminant bis (2-ethylhexyl) phthalate at a level less than the CRQL.
9. All initial calibrations associated with this data set were within acceptance criteria.
10. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.
11. Internal standard area and retention time criteria were met.

[illegible]

The results presented in this report relate only to the analytical testing and condition of the samples at receipt and during storage. All pages of this report are integral parts of the analytical data. Therefore, this report should only be reproduced in its entirety of 776 pages.

12. Manual integrations are performed according to SOP QA-125 to produce quality data with the utmost integrity. All manual integrations are required to be technically valid and properly documented. Appropriate technical flags are defined in the Glossary ("Technical Flags For Manual Integration").

13. LVL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

14. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee as verified by the following signature

Lionville Laboratory Sample Discrepancy Report (SDR)

SDR #: 09MS025

Initiator: Sharon Saylor
Date: 2-13-09
Client: WC Hanford [illegible]

Batch: 0E11053
Samples: ms, msd, BS
Method: [✓ SW846]/MCAWW/CLP

Parameter: 8270
Matrix: SOLID
Prep Batch: L901070

1. Reason for SDR

a. COC Discrepancy
__ Tech Profile Error
__ Transcription Error
Client Request
__ Wrong Test Code
Sampler Error on C-O-C
__ Other ______

b. General Discrepancy
__ Missing Sample/Extract*
__ Hold Time Exceeded
__ Improper Bottle Type
__ Container Broken
__ Insufficient Sample*
__ Not Amenable to Analysis
__ Wrong Sample Pulled
__ Preservation Wrong
__ Label ID's Illegible
__ Received Past Hold

Note*: Verified by [Log-In] or [Prep Group] (circle), signature/date: ______

c. Problem (Include all relevant specific results; attach data if necessary)

low or no spike recoveries in the BS, ms + msd

2. Known or Probable Causes(s) [illegible] phenols, nitroanilines, [illegible] subject to erratic chromatographic behavior especially if the GC system is contaminated with high boiling materials. 3,3'-dichlorobenzidine can be subject to oxidative losses during solvent concentration. Hexachlorocyclopentadiene is subject to thermal decomposition in the inlet of the gas chromatograph, chemical reaction in acetone solution, and photochemical decomposition. Other [illegible]. All surrogates within acceptance criteria, BS ok

3. Discussion and Proposed Action
__ Re-log
... Entire Batch
__ Following Samples: ______
__ Re-leach
__ Re-extract
__ Re-digest
__ Revise EDD
__ Change Test Code to ______
__ Place On/Take Off Hold (circle)

Other Description:

narrate

4. Project Manager Instructions signature/date 2/18/09
✓ Concur with Proposed Action
__ Disagree with Proposed Action; See Instruction
__ Include in Case Narrative
__ Client Contacted:
Date/Person ______
__ Add
__ Cancel

5. Final Action signature/date: 3/11/09
✓ Verified re-[log][leach][extract][digest][analysis] (circle)
✓ Included in Case Narrative

Date Received: 12-10-2008

DIESEL RANGE ORGANICS

Nine (9) solid samples were collected on 12-08-2008.

The samples and their associated QC samples were extracted on 12-19-2008 and analyzed according to Lionville Laboratory SOPs based on SW846, 3rd Edition procedure on 02-10,11-2009. The extraction procedure was based on method 3540C and the extracts were analyzed based on method 8015B.

All solid samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise. The following is a summary of QC results accompanying the sample results. Lionville Laboratory Inc (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. All required holding times for extraction have been met; however, samples were analyzed 14 days out of analysis hold.

2. The method blank was below the reporting limits for all target compounds.

3. Four (4) of thirteen (13) surrogate recoveries were outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR# 09GC036) has been enclosed.

4. All blank spike recoveries were within acceptance criteria.

5. All matrix spike recoveries were within acceptance criteria.

6. All initial calibrations associated with this data set were within acceptance criteria.

7. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.

8. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

[illegible]

The results presented in this report relate only to the analytical testing and conditions of the samples at receipt and during storage. All pages of this report are integral parts of the analytical data. Therefore, this report should only be reproduced in its entirety of 20 pages

9. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. 1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Technical verification documentation present? .... Yes [✓ No] N/A

Comments

2. INSTRUMENT TUNING AND CALIBRATION (Levels D and E)

GC/MS tuning/performance check acceptable? .... Yes No [✓ N/A]

Initial calibrations acceptable? .... Yes No [✓ N/A]

Continuing calibrations acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

Calculation check acceptable? .... Yes No [✓ N/A]

Comments:

GC/MS ORGANIC DATA VALIDATION CHECKLIST

3. BLANKS (Levels B, C, D, and E)

Calibration blanks analyzed? (Levels D, E) .... Yes No [✓ N/A]

Calibration blank results acceptable? (Levels D, E) .... Yes No [✓ N/A]

Laboratory blanks analyzed? .... [✓ Yes] No N/A

Laboratory blank results acceptable? .... Yes [✓ No] N/A

Field/trip blanks analyzed? (Levels C, D, E) .... Yes [✓ No] N/A

Field/trip blank results acceptable? (Levels C, D, E) .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: MO & DRO - U all detects

4. ACCURACY (Levels C, D, and E)

Surrogates/system monitoring compounds analyzed? .... [✓ Yes] No N/A

Surrogate/system monitoring compound recoveries acceptable? .... Yes [✓ No] N/A

Surrogates traceable? (Levels D, E) .... Yes No [✓ N/A]

Surrogates expired? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD samples analyzed? .... [✓ Yes] No N/A

MS/MSD results acceptable? .... Yes [✓ No] N/A

MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD standards? (Levels D, E) .... Yes No [✓ N/A]

LCS/BSS samples analyzed? .... [✓ Yes] No N/A

LCS/BSS results acceptable? .... Yes [✓ No] N/A

6. SYSTEM PERFORMANCE (Levels D and E)

Internal standards analyzed? .... Yes No [✓ N/A]
Internal standard areas acceptable? .... Yes No [✓ N/A]
Internal standard retention times acceptable? .... Yes No [✓ N/A]
Standards traceable? .... Yes No [✓ N/A]
Standards expired? .... Yes No [✓ N/A]
Transcription/calculation errors? .... Yes No [✓ N/A]
Comments:

7. HOLDING TIMES (all levels)

Samples properly preserved? .... [✓ Yes] No N/A
Sample holding times acceptable? .... Yes [✓ No] N/A
Comments: DRO/MO – <2X analysis time – J all

GC/MS ORGANIC DATA VALIDATION CHECKLIST

8. COMPOUND IDENTIFICATION, QUANTITATION, AND DETECTION LIMITS (all levels)

Compound identification acceptable? (Levels D, E) .... Yes No [✓ N/A]
Compound quantitation acceptable? (Levels D, E) .... Yes No [✓ N/A]
Results reported for all requested analyses? .... [✓ Yes] No N/A
Results supported in the raw data? (Levels D, E) .... Yes No [✓ N/A]
Samples properly prepared? (Levels D, E) .... Yes No [✓ N/A]
Laboratory properly identified and coded all TIC? (Levels D, E) .... Yes No [✓ N/A]
Detection limits meet RDL? .... Yes [✓ No] N/A
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]
Comments: [illegible] su ord
47L

9. SAMPLE CLEANUP (Levels D and E)

GPC cleanup performed? .... Yes No [✓ N/A]
GPC check performed? .... Yes No [✓ N/A]
GPC check recoveries acceptable? .... Yes No [✓ N/A]
GPC calibration performed? .... Yes No [✓ N/A]
GPC calibration check performed? .... Yes No [✓ N/A]
GPC calibration check retention times acceptable? .... Yes No [✓ N/A]
Check/calibration materials traceable? .... Yes No [✓ N/A]
Check/calibration materials Expired? .... Yes No [✓ N/A]
Analytical batch QC given similar cleanup? .... Yes No [✓ N/A]
Transcription/Calculation Errors? .... Yes No [✓ N/A]

To: Washington Closure Hanford (technical representative)
From: ELR Consultants
Project: Columbia River Component of the RCBRA - Sediment
Subject: PCB - Data Package No. K1489-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1489 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Anaysis
J18002	12/8/08	Solid	C	See note 1
J18003	12/8/08	Solid	C	See note 1
J18016	12/8/08	Solid	C	See note 1
J18017	12/8/08	Solid	C	See note 1
J17VN9	12/8/08	Solid	C	See note 1
J17YT4	12/8/08	Solid	C	See note 1
J17YT5	12/8/08	Solid	C	See note 1
J17YV8	12/8/08	Solid	C	See note 1
J17YV9	12/8/08	Solid	C	See note 1

1 – PCBs by 8082.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below;

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY OBJECTIVES

- **Holding Times & Sample Preservation**

There was no holding time specified for PCB analysis

- **Method Blank**

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation or analysis. At least one method blank analysis must be conducted for every 20 samples. Method blanks should not contain target compounds at a concentration greater than required quantitation limit (RQL). If target compounds are present, sample results less than five times the blank concentration are qualified as undetected and flagged "U". If the sample result is less than five times the blank concentration and less than RQL, the result is qualified as undetected and elevated to the RQL.

All method blank results were acceptable.

Field Blanks

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike & Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Non-detected sample results with spike recoveries outside control limits are qualified as estimates and flagged "UJ". Sample results greater than five times the spike concentration require no qualification.

All accuracy results were acceptable.

Surrogate Recovery

The analysis of surrogate compounds provides a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the laboratory. When a surrogate compound recovery is outside the control window, all positively identified target compounds associated with the unacceptable surrogate recoveries are qualified as estimates and flagged "J". Non-detected compounds with surrogate recoveries less than the lower control limit are qualified as having an estimated detection limit and flagged "UJ". Non-detected compounds with surrogate recoveries above the upper control limit require no qualification.

All surrogate results were acceptable.

- **Precision**

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike/matrix spike duplicate results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed as the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. For soil samples, results must be within RPD limits of plus/minus 30%. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

Due to RPDs outside QC limits (34% & 40%), all PCB results were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

One set of field duplicates (J18003/J17VN9) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All field duplicates results were acceptable.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the project specific RQLs to ensure that laboratory detection levels meet the required criteria. All analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

- **Completeness**

Data Package No. K1489 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to RPDs outside QC limits (34% & 40%), all PCB results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

All analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the procedures herein are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

PCBs

Nine (9) solid samples were collected on 12-08-2008.

The samples and associated QC samples were extracted on 03-15-2009 and analyzed according to Lionville Laboratory SOPs based on SW846, 3rd Edition procedure on 03-23,25,26-2009. The extraction procedure was based on method 3540C and the extracts were analyzed based on method 8082.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise. The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. The samples were extracted outside of recommended hold time.
2. The samples and their associated QC samples received Copper-Sulfur and Sulfuric Acid cleanups according to Lionville Laboratory SOPs based on SW846 methods 3660A and 3665A respectively.
3. The method blank was below the reporting limits for all target compounds.
4. All obtainable surrogate recoveries were within acceptance criteria.
5. All blank spike recoveries were within acceptance criteria.
6. All matrix spike recoveries were within acceptance criteria.
7. All initial calibrations associated with this data set were within acceptance criteria.
8. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.

The results presented in this report relate only to the analytical testing and condition of the samples at receipt and during storage. All pages of this report are integral parts of the analytical data. Therefore, this report should only be reproduced in its entirety of 19 pages.

9. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

10. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the laboratory manager or a designee as verified by the following signature.

1 – ICP metals by 6010B and mercury by 7471A

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 6 months for ICP metals and 28 days for mercury.

Due to the holding time being exceeded by less than twice the limit, all mercury results were qualified as estimates and flagged "J".

All other holding times were acceptable.

- **Preparation (Method) Blanks**

Preparation Blanks

At least one preparation blank, consisting of deionized distilled water processed through each sample preparation and analysis procedure, must be prepared and analyzed with every sample delivery group. In the case of positive blank results, samples with digestate concentrations less than five times the preparation blank value have had their associated values qualified as non-detected and flagged "U". Samples with concentrations of greater than five times the highest blank concentration do not require qualification.

In the case of negative blank results, if the absolute value exceeds the contract required detection limit (CRDL), all nondetects are rejected and flagged "UR" and all detects that are less than ten times the absolute value of the associated preparation blank result are qualified as estimates and flagged "J". If the absolute value of the negative preparation blank is greater than the instrument detection limit (IDL) and less than or equal to the CRDL, all nondetects are qualified as estimates and flagged "UJ" and all detects less than ten times the absolute value of the blank are qualified as estimates and flagged "J". If the sample results are greater than ten times the absolute value of the preparation blank, no qualification is necessary.

Due to method blank contamination, all detected mercury results were qualified as undetected and flagged "UJ".

All other preparation blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

Due to matrix spike recoveries outside QC limits, all antimony (48%) and cadmium (65%) results were qualified as estimates and flagged "J".

Due to an LCS recovery outside QC limits, all arsenic (171%), iron (143%), vanadium (188%), lead (58%) and thallium (0%) results were qualified as estimates and flagged "J"

All other accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicate

One set of field duplicates (J18003/J17VN9) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All field duplicates results were acceptable.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the project RQLs to ensure that laboratory detection levels meet the required criteria. All bismuth and tin results exceeded the RQL. Under the WCH statement of work, no qualification is required. All other results met the RQL.

- **Completeness**

Data package No. K1489 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to the holding time being exceeded by less than twice the limit, all mercury results were qualified as estimates and flagged "J".
- Due to method blank contamination, all detected mercury results were qualified as undetected and flagged "UJ".
- Due to matrix spike recoveries outside QC limits, all antimony (48%) and cadmium (65%) results were qualified as estimates and flagged "J".
- Due to an LCS recovery outside QC limits, all arsenic (171%), iron (143%), vanadium (188%), lead (58%) and thallium (0%) results were qualified as estimates and flagged "J"

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

METALS ORGANIC DATA QUALIFICATION SUMMARY*

SDG: K1489	**REVIEWER: ELR**	**Project: RCBRA**	**QC Issue**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Mercury	J	All	Hold time
Mercury	UJ	J18002, J17XK7 J18004, J18005 J18006,	Method blank contamination
Antimony Cadmium	J	All	MS recovery
Arsenic Iron Vanadium Lead Thallium	J	All	LCS

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Fax (610) 280-3041

Case Narrative

Client: WC-HANFORD RC-116
LVL#: 0812053 K1489

W.O.#: 60049-001-001-0001-00
Date Received: 12-10-08

METALS

The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise.

1. This narrative covers the analyses of 16 solid samples.
2. The samples were prepared and analyzed in accordance with methods checked on the attached glossary. The samples are reported on a wet weight, 'as-received' basis.
3. All ICP analyses were performed within the required holding times. The Mercury analysis was performed outside the required holding times.
4. All Initial and Continuing Calibration Verifications (ICV/CCVs) were within the 90-110% control limits (80-120% for Mercury)
5. All Initial and Continuing Calibration Blanks (ICB/CCBs) were within control limits (less than the LOQ).
6. All preparation/method blanks were within method criteria.
7. All ICP Interference Check Standards were within control limits.
8. All Standard Reference Material (SRM) analytes were within the Prediction Interval control limits.
9. The matrix spike (MS) recoveries for 5 analytes were outside the 75-125% control limits.
10. For analytes where the ICP MS is out-of-control, a post-digestion MS (PDS) and serial dilution are performed. A PDS was prepared at meaningful concentration level for the following analytes

Sample ID	Element	PDS Concentration (ppb)	PDS % Recovery
J18002	Aluminum	22,000	83.1
	Antimony	100	107.2
	Cadmium	100	97.3
	Iron	22,000	99.5
	Silicon	2,600	121.1

11. All duplicate analyses were within the 20% Relative Percent Difference (RPD) control limits.

12. For the purposes of this report, the data has been reported to the Limit of Detection (LOD). Values between the LOD and the Limit of Quantitation (LOQ) are acquired in a region of less-certain quantification.

13. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

14. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

Subject: Wet Chemistry - Data Package No. K1489-EB

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1489 prepared by Eberline Services (EB). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Anaysis
J17VN9	12/8/08	Solid	C	See note 1
J17XK6	12/8/08	Solid	C	See note 1
J17XK7	12/8/08	Solid	C	See note 1

J18006	12/8/08	Solid	C	See note 1
J18016	12/8/08	Solid	C	See note 1
J18017	12/8/08	Solid	C	See note 1

1 – Total organic carbon (TOC) by 415.1.

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 28 days for total organic carbon.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

Due to the holding time being exceeded by less than twice the limit, all TOC results were qualified as estimates and flagged "J".

- **Method Blanks**

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

All accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicate

One set of field duplicates (J18003/J17VN9) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All field duplicates results were acceptable.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package No. K1489 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiency was noted:

- Due to the holding time being exceeded by less than twice the limit, all TOC results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

WET CHEMISTRY DATA QUALIFICATION SUMMARY*

SDG: K1489	**REVIEWER: ELR**	**Project: RCBRA**	**QC Issue**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Total organic carbon	J	All	Hold time

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Date Received: 12-10-08

INORGANIC NARRATIVE

1. This narrative covers the analysis of 16 solid samples.

2. The samples were prepared and analyzed in accordance with the methods checked on the attached glossary.

   Lionville Lab (LvL) is NELAP accredited by the State of Pennsylvania. For a complete list of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager. LvL certifies that all test results meet the requirements of NELAC with any exception noted in the following statements.

3. Sample holding times as required by the method and/or contract were met.

4. The results presented in this report are derived from samples that met LvL's sample acceptance policy.

5. The method blank was within the method criteria.

6. The Laboratory Control Sample (LCS) was within the laboratory control limits.

7. The matrix spike recovery was within the 75-125% control limits.

8. The replicate analysis was within the 20% Relative Percent Difference (RPD) control limit.

9. Total Organic Carbon samples are dried prior to analysis.

10. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard copy package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

From: ELR Consultants
Project: Columbia River Component of the RCBRA - Sediment
Subject: Volatile - Data Package No. K1489-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1489 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analysis
J17YV5	12/8/08	Solid	C	See note 1
J17YV6	12/8/08	Solid	C	See note 1
J18002	12/8/08	Solid	C	See note 1
J18003	12/8/08	Solid	C	See note 1
J18016	12/8/08	Solid	C	See note 1
J18017	12/8/08	Solid	C	See note 1
J17VN9	12/8/08	Solid	C	See note 1
J17YT4	12/8/08	Solid	C	See note 1
J17YT5	12/8/08	Solid	C	See note 1
J17YV8	12/8/08	Solid	C	See note 1
J17YV9	12/8/08	Solid	C	See note 1

1 Volatiles by 8260C.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6 Additional Date Requested by Client

DATA QUALITY OBJECTIVES

Holding Times & Sample Preservation

Analytical holding times were assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows. Samples must be extracted and analyzed within 14 days of the date of sample collection

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

Method Blanks

Method blank analyses are conducted to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. Analytical results for analytes present in any sample at less than five times the concentration of that analyte found in the associated blank are qualified as non-detects and flagged "U". Common laboratory contaminants present in samples at less than ten times the concentration of that analyte found in the associated blank are qualified as non-detects. If a sample result is less than the CRQL and is less than five times (or less than ten times for lab contaminants) the highest associated blank result, the sample result value is raised to the CRQL level and qualified as undetected "U".

Due to method blank contamination, all detected methylene chloride were raised to the RQL, qualified as undetected and flagged "U".

All other method blank results were acceptable.

Field Blanks

One field (trip) blank (J17VY5) was submitted for analysis. No analytes were detected in the field blank.

Accuracy

Matrix Spike/Matrix Spike Duplicate & Blank Spike Recoveries

Matrix spike/matrix spike duplicate analyses are used to assess the analytical accuracy of the reported data and the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike/matrix spike duplicate analyses are performed in duplicate using five compounds for which percent recoveries must be within a range of 50-150% or within laboratory control limits. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Undetected sample results with spike recoveries below control limits are qualified as estimates and flagged "UJ" Undetected sample results are not qualified if the spike recovery is above control limits. Sample results greater than five times the spike concentration require no qualification.

All accuracy results were acceptable.

Surrogate Recovery

The analyses of surrogate compounds provide a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the EPA CLP program. If two surrogates of the same class of compounds (base/neutral or acid) are out of control limits, all associated sample results greater than the contract required quantitation limit (CRQL) are qualified as estimates and flagged "J". Sample results less than the CRQL and below the lower control limit are qualified as estimates and flagged "UJ". Sample results less than the CRQL with recoveries above the upper control limit require no qualification. If a surrogate recovery is less than 10%, detects are qualified as estimates and flagged "J" and nondetects are rejected and flagged "UR"

All surrogate results were acceptable.

- **Precision**

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike (MS)/matrix spike duplicate (MSD) results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed by the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. Samples results must be within RPD limits of +/-30%. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

All precision results were acceptable.

Field Duplicate Samples

One set of field duplicates (J18003/J17VN9) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All field duplicates results were acceptable.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQL's) to ensure that laboratory detection levels meet the required criteria. All 1,1,1-trichloroethane results exceeded the RQL. Under the WCH statement of work, no qualification is required. All other analyes (with an RQL) met the RQL.

- **Completeness**

Data package No. K1489 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to method blank contamination, all detected methylene chloride results were raised to the RQL, qualified as undetected and flagged "U".

All 1,1,1-trichloroethane results exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the same quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

VOLATILE ORGANIC DATA QUALIFICATION SUMMARY*

SDG: K1489	**REVIEWER: ELR**	**Project: RCBRA**	**QC Issue**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Methylene Chloride	U at RQL	All detected analytes	Method blank contamination

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Date Received: 12-10-2008

GC/MS VOLATILE

Eleven (11) solid samples were collected on 12-08-2008.

The samples and associated QC samples were analyzed according to criteria set forth in Lionville Laboratory SOPs based on SW 846 Method 8260B for TCL Volatile target compounds on 12-19,20-2008.

The following is a summary of QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. Samples were analyzed within hold time.
2. Samples reported on an "as received" basis.
3. Non-target compounds were detected in these samples.
4. All surrogate recoveries were within acceptance criteria.
5. Four (4) of seventy-four matrix spike recoveries were outside acceptance criteria.
6. One (1) of seventy-four (74) blank spike recoveries was outside acceptance criteria.
7. The method blanks contained the common laboratory contaminant Methylene Chloride at a level less than the CRQL.
8. All internal standard area and retention time criteria were met.
9. Manual integrations are performed according to SOP QA-125 to produce quality data with utmost integrity. All manual integrations are required to be technically valid and properly documented. Appropriate technical flags are defined in the Glossary ("Technical Flags For Manual Integration")

10. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager

11. "I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

Gary Daniels
Laboratory Manager
Lionville Laboratory

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Technical verification documentation present? .... Yes [✓ No] N/A

Comments:

2. INSTRUMENT TUNING AND CALIBRATION (Levels D and E)

GC/MS tuning/performance check acceptable? .... Yes No [✓ N/A]

Initial calibrations acceptable? .... Yes No [✓ N/A]

Continuing calibrations acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

Calculation check acceptable? .... Yes No [✓ N/A]

Comments:

GC/MS ORGANIC DATA VALIDATION CHECKLIST

3. BLANKS (Levels B, C, D, and E)

Calibration blanks analyzed? (Levels D, E) .... Yes No [✓ N/A]

Calibration blank results acceptable? (Levels D, E) .... Yes No [✓ N/A]

Laboratory blanks analyzed? .... [✓ Yes] No N/A

Laboratory blank results acceptable? .... Yes [✓ No] N/A

Field/trip blanks analyzed? (Levels C, D, E) .... [✓ Yes] No N/A

Field/trip blank results acceptable? (Levels C, D, E) .... [✓ Yes] No N/A

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: MC = U all detects and RQL

4. ACCURACY (Levels C, D, and E)

Surrogates/system monitoring compounds analyzed? .... [✓ Yes] No N/A

Surrogate/system monitoring compound recoveries acceptable? .... [✓ Yes] No N/A

Surrogates traceable? (Levels D, E) .... Yes No [✓ N/A]

Surrogates expired? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD samples analyzed? .... [✓ Yes] No N/A

MS/MSD results acceptable? .... [✓ Yes] No N/A

MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD standards? (Levels D, E) .... Yes No [✓ N/A]

LCS/BSS samples analyzed? .... [✓ Yes] No N/A

LCS/BSS results acceptable? .... [✓ Yes] No N/A

Standards traceable? (Levels D, E) .... Yes No [✓ N/A]

Standards expired? (Levels D, E) .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Performance audit sample(s) analyzed? .... Yes [✓ No] N/A

Performance audit sample results acceptable? .... Yes No [✓ N/A]

Comments: No PAT

GC/MS ORGANIC DATA VALIDATION CHECKLIST

5. PRECISION (Levels C, D, and E)

MS/MSD samples analyzed? .... [✓ Yes] No N/A

MS/MSD RPD values acceptable? .... [✓ Yes] No N/A

MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]

Field duplicate RPD values acceptable? .... [✓ Yes] No N/A

Field split RPD values acceptable? .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments:

6. SYSTEM PERFORMANCE (Levels D and E)

Internal standards analyzed? .... Yes No [✓ N/A]

Internal standard areas acceptable? .... Yes No [✓ N/A]

Internal standard retention times acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

Transcription/calculation errors? .... Yes No [✓ N/A]

Comments:

7. HOLDING TIMES (all levels)

Samples properly preserved? .... [✓ Yes] No N/A

Sample holding times acceptable? .... [✓ Yes] No N/A

Comments:

GC/MS ORGANIC DATA VALIDATION CHECKLIST

8. COMPOUND IDENTIFICATION, QUANTITATION, AND DETECTION LIMITS (all levels)

Compound identification acceptable? (Levels D, E) .... Yes No [✓ N/A]

Compound quantitation acceptable? (Levels D, E) .... Yes No [✓ N/A]

Results reported for all requested analyses? .... [✓ Yes] No N/A

Results supported in the raw data? (Levels D, E) .... Yes No [✓ N/A]

Samples properly prepared? (Levels D, E) .... Yes No [✓ N/A]

Laboratory properly identified and coded all TIC? (Levels D, E) .... Yes No [✓ N/A]

Detection limits meet RDL? .... ~~Yes~~ [✓ No] N/A

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: 1,1,1-trichloroethane - all on

9. SAMPLE CLEANUP (Levels D and E)

GPC cleanup performed? .... Yes No [✓ N/A]

GPC check performed? .... Yes No [✓ N/A]

GPC check recoveries acceptable? .... Yes No [✓ N/A]

GPC calibration performed? .... Yes No [✓ N/A]

GPC calibration check performed? .... Yes No [✓ N/A]

GPC calibration check retention times acceptable? .... Yes No [✓ N/A]

Check/calibration materials traceable? .... Yes No [✓ N/A]

Check/calibration materials Expired? .... Yes No [✓ N/A]

Analytical batch QC given similar cleanup? .... Yes No [✓ N/A]

Transcription/Calculation Errors? .... Yes No [✓ N/A]

SDG K1525 **SAF-RC-116**

Date	8 December 2009
To:	Washington Closure Hanford Inc. (technical representative)
From:	ELR Consulting
Project:	Columbia River Component of the RCBRA – Sediment
Subject:	Metals - Data Package No. K1525-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1525 prepared by Lionville Laboratories Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Anaysis
J18157-A	2/2/09	Solid	C	See note 1
J18158-A	2/2/09	Solid	C	See note 1
J18159-A	2/2/09	Solid	C	See note 1
J18160-A	2/2/09	Solid	C	See note 1
J18177	2/3/09	Solid	C	See note 1
J18198	2/3/09	Solid	C	See note 1

J180W9-A	2/2/09	Solid	C	See note 1

1 - ICP metals by 6010B and mercury by 7471A.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 6 months for ICP metals and 28 days for mercury

All holding times were acceptable.

- **Preparation (Method) Blanks**

Preparation Blanks

At least one preparation blank, consisting of deionized distilled water processed through each sample preparation and analysis procedure, must be prepared and analyzed with every sample delivery group. In the case of positive blank results, samples with digestate concentrations less than five times the preparation blank value have had their associated values qualified as non-detected and flagged "U". Samples with concentrations of greater than five times the highest blank concentration do not require qualification.

In the case of negative blank results, if the absolute value exceeds the contract required detection limit (CRDL), all nondetects are rejected and flagged "UR" and all detects that are less than ten times the absolute value of the associated preparation blank result are qualified as estimates and flagged "J". If the absolute value of the negative preparation blank is greater than the instrument detection limit (IDL) and less than or equal to the CRDL, all nondetects are qualified as estimates and flagged "UJ" and all detects less than ten times the absolute value of the blank are qualified as estimates and flagged "J". If the sample results are greater than ten times the absolute value of the preparation blank, no qualification is necessary.

Due to method blank contamination, all molybdenum results (except J180W9-A) were qualified as undetected and flagged "UJ"

Due to method blank contamination, the tin result in samples J17V87, J17V88 and J17V89 were qualified as estimates and flagged "UJ".

All other preparation blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

/

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

Due to the lack of a matrix spike analysis, all metal results in sample J180W9-A were qualified as estimates and flagged "J".

Due to matrix spike recoveries outside QC limits, all antimony (28%) results (except J180W9-A) were qualified as estimates and flagged "J".

Due to an LCS recovery outside QC limits, all arsenic (201%), iron (137%), vanadium (197%) and thallium (0%) results (except J180W9-A) were qualified as estimates and flagged "J".

Due to an LCS recovery outside QC limits, all arsenic (215%), iron (144%), vanadium (170%) and thallium (0%) results in sample J180W9-A were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

Due to the lack of a duplicate analysis, all metal results in sample J180W9-A were qualified as estimates and flagged "J".

All other laboratory duplicate results were acceptable.

Field Duplicate

Two sets of field duplicates (J18177/J17VP0 & J17V87/J17VP5) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All field duplicates results were acceptable.

Analytical Detection Levels

Reported analytical detection levels are compared against the project RQLs to ensure that laboratory detection levels meet the required criteria. All results met the RQL.

- **Completeness**

Data package No K1525 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e . not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to method blank contamination, all molybdenum results (except J180W9-A) were qualified as undetected and flagged "UJ".
- Due to method blank contamination, the tin result in samples J17V87, J17V88 and J17V89 were qualified as estimates and flagged "UJ".
- Due to the lack of a matrix spike analysis, all metal results in sample J180W9-A were qualified as estimates and flagged "J".
- Due to matrix spike recoveries outside QC limits, all antimony (28%) results (except J180W9-A) were qualified as estimates and flagged "J".
- Due to an LCS recovery outside QC limits, all arsenic (201%), iron (137%), vanadium (197%) and thallium (0%) results (except J180W9-A) were qualified as estimates and flagged "J".
- Due to an LCS recovery outside QC limits, all arsenic (215%), iron (144%), vanadium

(170%) and thallium (0%) results in sample J180W9-A were qualified as estimates and flagged "J".

- Due to the lack of a duplicate analysis, all metal results in sample J180W9-A were qualified as estimates and flagged "J"

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

METALS ORGANIC DATA QUALIFICATION SUMMARY*

SDG: K1525	**REVIEWER: ELR**	**Project: RCBRA**	**QC Issue**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Molybdenum	UJ	All (except J180W9-A)	Method blank contamination
Tin	UJ	J17V87, J17V88, J17V89	Method blank contamination
All	J	J180W9-A	No MS or duplicate analysis
Antimony	J	All (except J180W9-A)	MS recovery
Arsenic Iron Vanadium Thallium	J	All	LCS recovery

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Appendix 4

Laboratory Narrative and Chain-of-Custody Documentation

Case Narrative

Client: WC-HANFORD RC-116
LVL#: 0902012
SDG/SAF#: K1525/RC-116

W.O.#: 60049-001-001-0001-00
Date Received: 02-05-09

METALS

The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise.

1. This narrative covers the analyses of 21 soil samples. The samples are reported on a wet weight, 'as-received' basis.
2. The samples were prepared and analyzed in accordance with methods checked on the attached glossary.
3. All analyses were performed within the required holding times.
4. All Initial and Continuing Calibration Verifications (ICV/CCVs) were within the 90-110% control limits.
5. All Initial and Continuing Calibration Blanks (ICB/CCBs) were within control limits (less than the LOQ).
6. All preparation/method blanks (MB) were within method criteria (less than the Limit of Quantitation (3-10X the LOD), or samples greater than 20X MB value).
7. All ICP Interference Check Standards were within control limits.
8. The Standard Reference Material results (SRM) were within the Prediction Intervals supplied by the SRM manufacturer.
9. The matrix spike (MS) recoveries for 4 analytes were outside the 75-125% control limits
10. For analytes where the ICP MS is out-of-control, a post-digestion MS (PDS) and serial dilution are performed. A PDS was prepared at meaningful concentration level for the following analytes:

Sample ID	Element	PDS Concentration (ppb)	PDS % Recovery
J18157	Aluminum	22,000	89.5
	Antimony	100	96.8
	Iron	22,000	53.6
	Silicon	2,600	94.6

11. All duplicate analyses were within the 20% Relative Percent Difference (RPD) control limits.

12. For the purposes of this report, the data has been reported to the Limit of Detection (LOD). Values between the LOD and the Limit of Quantitation (LOQ) are acquired in a region of less-certain quantification.

13. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

14. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

Iain Daniels

Solid

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Technical verification documentation present? Yes [✓ No] N/A

Comments:

2. INSTRUMENT PERFORMANCE AND CALIBRATIONS (Levels D and E)

Initial calibrations performed on all instruments? Yes No [✓ N/A]

Initial calibrations acceptable? Yes No [✓ N/A]

ICP interference checks acceptable? Yes No [✓ N/A]

ICV and CCV checks performed on all instruments? Yes No [✓ N/A]

ICV and CCV checks acceptable? Yes No [✓ N/A]

Standards traceable? Yes No [✓ N/A]

Standards expired? Yes No [✓ N/A]

Calculation check acceptable? Yes No [✓ N/A]

Comments: Yes No [✓ N/A]

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

3. BLANKS (Levels B, C, D, and E)

ICB and CCB checks performed for all applicable analyses? (Levels D, E) .... Yes No [✓ N/A]
ICB and CCB results acceptable? (Levels D, E) .... Yes No [✓ N/A]
Laboratory blanks analyzed? .... [✓ Yes] No N/A
Laboratory blank results acceptable? .... Yes [✓ No] N/A
Field blanks analyzed? (Levels C, D, E) .... Yes [✓ No] N/A
Field blank results acceptable? (Levels C, D, E) .... Yes No [✓ N/A]
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: tin – W9, 8A, 8B, – UJ no 5B
molybdenum – UJ all (except W9-A)

4. ACCURACY (Levels C, D, and E)

MS/MSD samples analyzed? .... [✓ Yes] No N/A
MS/MSD results acceptable? .... Yes [✓ No] N/A
MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]
MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]
LCS/BSS samples analyzed? .... [✓ Yes] No N/A
LCS/BSS results acceptable? .... Yes [✓ No] N/A
Standards traceable? (Levels D, E) .... Yes No [✓ N/A]
Standards expired? (Levels D, E) .... Yes No [✓ N/A]
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]
Performance audit sample(s) analyzed? .... Yes [✓ No] N/A
Performance audit sample results acceptable? .... Yes No [✓ N/A]

Comments: MS – antimony – 28% – J all (except W9-A)
~~MS – silver – 194% – J all~~ W9-A – no MS – J all
LCS – arsenic, iron, thallium, vanadium – J all

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

5. PRECISION (Levels C, D, and E)

Duplicate RPD values acceptable? [✓ Yes] No N/A

Duplicate results acceptable? [✓ Yes] No N/A

MS/MSD standards NIST traceable? (Levels D, E) Yes No [✓ N/A]

MS/MSD standards expired? (Levels D, E) Yes No [✓ N/A]

Field duplicate RPD values acceptable? [✓ Yes] No N/A

Field split RPD values acceptable? Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) Yes No [✓ N/A]

Comments: WS-A - no dup - July

6. ICP QUALITY CONTROL (Levels D and E)

ICP serial dilution samples analyzed? Yes No [✓ N/A]

ICP serial dilution %D values acceptable? Yes No [✓ N/A]

ICP post digestion spike required? Yes No [✓ N/A]

ICP post digestion spike values acceptable? Yes No [✓ N/A]

Standards traceable? Yes No [✓ N/A]

Standards expired? Yes No [✓ N/A]

Transcription/calculation errors? Yes No [✓ N/A]

Comments:

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

7. FURNACE AA QUALITY CONTROL (Levels D and E)

Duplicate injections performed as required? .... Yes No [✓ N/A]

Duplicate injection %RSD values acceptable? .... Yes No [✓ N/A]

Analytical spikes performed as required? .... Yes No [✓ N/A]

Analytical spike recoveries acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

MSA performed as required? .... Yes No [✓ N/A]

MSA results acceptable? .... Yes No [✓ N/A]

Transcription/calculation errors? .... Yes No [✓ N/A]

Comments: ____________

8. HOLDING TIMES (all levels)

Samples properly preserved? .... [✓ Yes] No N/A

Sample holding times acceptable? .... [✓ Yes] No N/A

Comments: ____________

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

9. RESULT QUANTITATION AND DETECTION LIMITS (all levels)

Results reported for all requested analyses? .... [✓ Yes] No N/A

Results supported in the raw data? (Levels D, E) .... Yes No [✓ N/A]

Samples properly prepared? (Levels D, E) .... Yes No [✓ N/A]

Detection limits meet RDL? .... [✓ Yes] No N/A

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Subject: Wet Chemistry - Data Package No. K1525-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1525 prepared by Lionville Laboratories Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Anaysis
J18157-A	2/2/09	Solid	C	See note 1
J18158-A	2/2/08	Solid	C	See note 1
J18159-A	2/2/09	Solid	C	See note 1
J18160-A	2/2/09	Solid	C	See note 1
J18177	2/3/09	Solid	C	See note 1
J18198	2/3/09	Solid	C	See note 1

J17V88	2/3/09	Solid	C	See note 1
J17V89	2/3/09	Solid	C	See note 1
J17V90	2/3/09	Solid	C	See note 1
J17V91	2/3/09	Solid	C	See note 1
J17V92	2/3/09	Solid	C	See note 1
J17VP0	2/3/09	Solid	C	See note 1
J17VP5	2/3/09	Solid	C	See note 1
J180W8-A	2/2/09	Solid	C	See note 1
J180W9-A	2/2/09	Solid	C	See note 1

1 – Total organic carbon (TOC) by 415.1.

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 28 days for total organic carbon.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Method Blanks**

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130% Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR" Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

Due to the lack of a matrix spike analysis, all TOC results in samples J17V90, J17V91, J17V92, J17VP0, J17VP5, J180W8-A and J180W9-A were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Precision

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

Due to the lack of a duplicate analysis, all TOC results in samples J17V90, J17V91, J17V92, J17VP0, J17VP5, J180W8-A and J180W9-A were qualified as estimates and flagged "J".

All other laboratory duplicate results were acceptable.

Field Duplicate

Two sets of field duplicates (J18177/J17VP0 & J17V87/J17VP5) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. The RPD for TOC in field duplicate pair J18177/J17VP0 was outside QC limits (43%). Under the WCH statement of work, no qualification is required.

· Analytical Detection Levels

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

· Completeness

Data package No. K1525 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found

MINOR DEFICIENCIES

The following minor deficiency was noted:

- Due to the lack of a matrix spike and duplicate analysis, all TOC results in samples J17V90, J17V91, J17V92, J17VP0 , J17VP5, J180W8-A and J180W9-A were qualified as estimates and flagged "J"

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the 134sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes)

Appendix 2

Summary of Data Qualification

WET CHEMISTRY DATA QUALIFICATION SUMMARY*

SDG: K1526	**REVIEWER: ELR**	**Project: RCBRA**	**QC Issue**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Total organic carbon	J	J17V90, J17V91 J17V92, J17VP0 J17VP5, J180W8-A J180W9-A	No MS or duplicate analysis

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

INORGANIC NARRATIVE

1. This narrative covers the analysis of 21 solid samples.

2. The samples were prepared and analyzed in accordance with the method indicated in the data summary report.

   Lionville Lab (LvL) is NELAP accredited by the State of Pennsylvania. For a complete list of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager. LvL certifies that all test results meet the requirements of NELAC with any exception noted in the following statements.

3. Sample holding times as required by the method and/or contract were met.

4. The results presented in this report are derived from samples that met LvL's sample acceptance policy.

5. The method blank was within the method criteria.

6. The Laboratory Control Sample (LCS) was within the laboratory control limits.

7. The matrix spike recovery was within the 75-125% control limits.

8. The replicate analysis was within the 20% Relative Percent Difference (RPD) control limit.

9. Total Organic Carbon samples are dried prior to analysis.

10. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard copy package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

Iain Daniels

1 – Semivolatiles by 8270 & diesel range organics by 8015D.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain of Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY OBJECTIVES

- **Holding Times & Sample Preservation**

Analytical holding times were assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Samples must be extracted within 14 days of the date of sample collection and analyzed within 40 days from the date of extraction.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

Method Blanks

Method blank analyses are conducted to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. Analytical results for analytes present in any sample at less than five times the concentration of that analyte found in the associated blank are qualified as non-detects and flagged "U". Common laboratory contaminants present in samples at less than ten times the concentration of that analyte found in the associated blank are qualified as non-detects. If a sample result is less than the CRQL and is less than five times (or less than ten times for lab contaminants) the highest associated blank result, the sample result value is raised to the CRQL level and qualified as undetected "U".

Due to method blank contamination, all motor oil results (except J17VP0, J17VB0, J18177 and J18198) were qualified as undetected and flagged "U".

All other method blank results were acceptable.

Field Blanks

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike/Matrix Spike Duplicate & Blank Spike Recoveries

Matrix spike/matrix spike duplicate analyses are used to assess the analytical accuracy of the reported data and the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike/matrix spike duplicate analyses are performed in duplicate using five compounds for which percent recoveries must be within a range of 50-150% or within laboratory control limits. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Undetected sample results with spike recoveries below control limits are qualified as estimates and flagged "UJ". Undetected sample results are not qualified if the spike recovery is above control limits. Sample results greater than five times the spike concentration require no qualification.

Due to the lack of a matrix spike, matrix spike duplicate and LCS analysis, all motor oil results were qualified as estimates and flagged "J".

Due to matrix spike recovery outside QC limits, all hexachloroethane (44%), 4-chloroanaline (29%), hexachlorocyclopentadiene (0%) and 3,3-dichlorobenzidine (0%) results were qualified as estimates and flagged "J".

Due to a matrix spike duplicate recovery outside QC limits, all hexachloroethane (38%), 4-chloroanaline (28%), hexachlorocyclopentadiene (0%) and 3,3-dichlorobenzidine (0%) results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Surrogate Recovery

The analyses of surrogate compounds provide a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the EPA CLP program. If two surrogates of the same class of compounds (base/neutral or acid) are out of control limits, all associated sample results greater than the contract required quantitation limit (CRQL) are qualified as estimates and flagged "J". Sample results less than the CRQL and below the lower control limit are qualified as estimates and flagged "UJ". Sample results less than the CRQL with recoveries above the upper control limit require no qualification. If a surrogate recovery is less than 10%, detects are qualified as estimates and flagged "J" and nondetects are rejected and flagged "UR".

Due surrogate recoveries outside QC limits, all semivolatile results in sample J17VP5 (except naphthalene, acenaphthylene, acenaphthene, fluorene, phenanthrene, anthracene, fluoranthene, pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthrene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(1,2,3-c,d)pyrene and benzo(g,h,i)perylene) were qualified as estimates and flagged "J".

All other surrogate results were acceptable.

- Precision

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike (MS)/matrix spike duplicate (MSD) results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed by the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. Samples results must be within RPD limits of +/-30%. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

Due to the lack of a matrix spike and matrix spike recovery, all hexachlorocyclopentadiene and 3,3-dichlorobenzidine results were qualified as estimates and flagged "J".

Due to RPDs outside QC limits, all 4-nitrophenol (45%) and pentachlorophenol (44%) results were qualified as estimates and flagged "J".

Due to the lack of a matrix spike and matrix spike duplicate analysis, all motor oil results were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

Two sets of field duplicates (J18177/J17VP0 & J17V87/J17VP5) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All field duplicates results were acceptable.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQL's) to ensure that laboratory detection levels meet the required criteria. All semivolatile analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

- **Completeness**

Data package No. K1525 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to method blank contamination, all motor oil results (except J17VP0, J17VB0, J18177 and J18198) were qualified as undetected and flagged "U".
- Due to the lack of a matrix spike, matrix spike duplicate and LCS analysis, all motor oil results were qualified as estimates and flagged "J".
- Due to matrix spike recovery outside QC limits, all hexachloroethane (44%), 4-chloroanaline (29%), hexachlorocyclopentadiene (0%) and 3,3-dichlorobenzidine (0%) results were qualified as estimates and flagged "J".
- Due to a matrix spike duplicate recovery outside QC limits, all hexachloroethane (38%), 4-chloroanaline (28%), hexachlorocyclopentadiene (0%) and 3,3-dichlorobenzidine (0%) results were qualified as estimates and flagged "J".
- Due surrogate recoveries outside QC limits, all semivolatile results (except naphthalene, acenaphthylene, acenaphthene, fluorene, phenanthrene, anthracene, fluoranthene, pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthrene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(1,2,3-c,d)pyrene and benzo(g,h,i)perylene) in sample J17VP5 were qualified as estimates and flagged "J".
- Due to the lack of a matrix spike and matrix spike recovery, all hexachlorocyclopentadiene and 3,3-dichlorobenzidine results were qualified as estimates and flagged "J".
- Due to RPDs outside QC limits, all 4-nitrophenol (45%) and pentachlorophenol (44%) results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

All semivolatile analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample The value reported is the same quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

SEMIVOLATILE/DRO ORGANIC DATA QUALIFICATION SUMMARY*

SDG: K1525	**REVIEWER: ELR**	**Project: RCBRA**	**QC Issue**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Motor oil	U	All (except J17VP0, J17VB0, J18177 and J18198)	Method blank contamination
Motor oil	J	All	No MS, MSD or LCS analysis
Hexachloroethane 4-chloroanaline hexachlorocyclopentadiene 3,3-dichlorobenzidine	J	All	MS and MSD recovery
All (except naphthalene, acenaphthylene, acenaphthene, fluorene, phenanthrene, anthracene, fluoranthene, pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthrene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(1,2,3-c,d)pyrene and benzo(g,h,i)perylene)	J	J17VP5	Surrogate recovery
hexachorocyclopentadiene 3,3-dichlorobenzidine 4-nitrophenol pentachlorophenol	J	All	RPD

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Date Received: 02-05-2009

SEMIVOLATILE

Nineteen (19) solid samples were collected on 02-02,03-2009.

The samples and their associated QC samples were extracted according to Lionville Laboratory SOPs based on SW 846 method 3540C on 02-11-2009 and analyzed according to criteria set forth in Lionville Laboratory SOPs based on SW 846 Method 8270C for TCL Semivolatile target compounds on 02-16,17,23,24-2009 and 03-23-2009.

All solid samples are reported on a wet weight basis. The following is a summary of QC results accompanying the sample results. Lionville Laboratory (LVL) certifies that all test results meet the requirements of NELAC except as noted below.

1. All results presented in this report are derived from samples that met LvL's sample acceptance policy.
2. Samples were extracted and analyzed within the recommended holding time.
3. Non-target compounds were detected in these samples.
4. All samples required between 2-fold and 3-fold instrument dilutions due to matrix. Reporting limits have been adjusted to reflect the necessary dilutions.
5. Five (5) of one hundred thirty-eight (138) surrogate recoveries were outside acceptance criteria. The surrogate recovery criteria were not met for sample J17VP5. A copy of the Sample Discrepancy Report (SDR# 09MS069) has been enclosed.
6. Nine (9) of one hundred twenty-eight (128) matrix spike recoveries were outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR# 09MS069) has been enclosed.
7. All blank spike recoveries were within acceptance criteria.
8. The method blanks were below the reporting limit for all target compounds.
9. All initial calibrations associated with this data set were within acceptance criteria.
10. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.

11. Internal standard area criteria were not met for sample J17V90. The GC/MS instrument was inspected for possible malfunction and was judged to be functioning properly and all surrogate recoveries were within QC limits; consequently, the sample was not reanalyzed.

12. Manual integrations are performed according to SOP QA-125 to produce quality data with the utmost integrity. All manual integrations are required to be technically valid and properly documented. Appropriate technical flags are defined in the Glossary ("Technical Flags For Manual Integration").

13. LVL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

14. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee as verified by the following signature.

Lionville Laboratory Sample Discrepancy Report (SDR)

SDR #: 0905069

Initiator: Robert Carden
Date: 9/9/09
Client: [illegible]

Batch: 09[illegible]2012
Samples: JJ9VPS (MS/MSD)
Method: [✓ SW846]/MCAWW/CLPL

Parameter: [illegible]
Matrix: Solid
Prep Batch: 09[illegible]2049

1. Reason for SDR

a. COC Discrepancy

Tech Profile Error
__ Client Request
__ Sampler Error on C-O-C
__ Transcription Error
__ Wrong Test Code
__ Other ____

b. General Discrepancy

__ Missing Sample/Extract*
__ Container Broken
__ Wrong Sample Pulled
Label ID's Illegible
__ Hold Time Exceeded
Insufficient Sample*
Preservation Wrong
__ Received Past Hold
__ Improper Bottle Type
Not Amenable to Analysis

Note* Verified by (Log-In) or (Prep Group) (circle)...signature/date.

c. Problem (include all relevant specific results; attach data if necessary)

(1) Surrogates outside QC acceptance criteria in sample JJ9VPS
(2) Several spike recoveries outside QC acceptance criteria in MS/MSD. BS [illegible] All surrogates within acceptance criteria

2. Known or Probable Causes(s) (1) possible loss during sample concentration in N-Evap, lab blank surrogate within acceptance criteria (2) [illegible] chemical reactions in solution, photochemical decomposition. [illegible] sample concentration. VPS specific

3. Discussion and Proposed Action

Other Description: None

_ Re-log
__ Entire Batch
__ Following Samples: ____
Re-leach
__ Re-extract
Re-digest
__ Revise EDD
__ Change Test Code to ____
__ Place On/Take Off Hold (circle)

4. Project Manager Instructions...signature/date. 9/14/09

__ Concur with Proposed Action
__ Disagree with Proposed Action; See Instruction
__ Include in Case Narrative
__ Client Contacted:
Date/Person ____
__ Add
__ Cancel

5. Final Action...signature/date. 9-14-09

Other Explanation:

__ Verified re-[log][leach][extract][digest][analysis] (circle)
✓ Included in Case Narrative
__ Hard Copy COC Revised
Electronic COC Revised
__ EDD Corrections Completed

When Final Action has been recorded, forward original to QA for diposition.

DIESEL RANGE ORGANICS

Seventeen (17) solid samples were collected on 02-02,03-2009.

The samples and their associated QC samples were extracted on 02-15-2009 and analyzed according to Lionville Laboratory SOPs based on SW846, 3rd Edition procedure on 02-20,21-2009. The extraction procedure was based on method 3540C and the extracts were analyzed based on method 8015B.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise. The following is a summary of QC results accompanying the sample results. Lionville Laboratory Inc (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. All required holding times for extraction and analysis have been met.
2. The method blank was below the client specified reporting limits for all target compounds.
3. One (1) of twenty-one (21) surrogate recoveries was outside acceptance criteria. However, the surrogate acceptance criteria were met (i.e., no more than one outlier per sample).
4. All blank spike recoveries were within acceptance criteria.
5. All matrix spike recoveries were within acceptance criteria.
6. All initial calibrations associated with this data set were within acceptance criteria.
7. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.
8. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

9. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. 1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Technical verification documentation present? .... Yes [✓ No] N/A

Comments:

2. INSTRUMENT TUNING AND CALIBRATION (Levels D and E)

GC/MS tuning/performance check acceptable? .... Yes No [✓ N/A]

Initial calibrations acceptable? .... Yes No [✓ N/A]

Continuing calibrations acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

Calculation check acceptable? .... Yes No [✓ N/A]

Comments:

GC/MS ORGANIC DATA VALIDATION CHECKLIST

3. BLANKS (Levels B, C, D, and E)

Calibration blanks analyzed? (Levels D, E) .... Yes No [✓ N/A]

Calibration blank results acceptable? (Levels D, E) .... Yes No [✓ N/A]

Laboratory blanks analyzed? .... [✓ Yes] No N/A

Laboratory blank results acceptable? .... ~~Yes~~ [✓ No] N/A

Field/trip blanks analyzed? (Levels C, D, E) .... Yes [✓ No] N/A

Field/trip blank results acceptable? (Levels C, D, E) .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: Method - Blank (all but 90, 80, 99, 77) - U   No FB.

4. ACCURACY (Levels C, D, and E)

Surrogates/system monitoring compounds analyzed? .... [✓ Yes] No N/A

Surrogate/system monitoring compound recoveries acceptable? .... Yes [✓ No] N/A

Surrogates traceable? (Levels D, E) .... Yes No [✓ N/A]

Surrogates expired? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD samples analyzed? .... [✓ Yes] No N/A

MS/MSD results acceptable? .... Yes [✓ No] N/A

MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD standards? (Levels D, E) .... Yes No [✓ N/A]

LCS/BSS samples analyzed? .... [✓ Yes] No N/A

LCS/BSS results acceptable? .... [✓ Yes] No N/A

Standards traceable? (Levels D, E) .... Yes No [✓ N/A]

Standards expired? (Levels D, E) .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Performance audit sample(s) analyzed? .... Yes [✓ No] N/A

Performance audit sample results acceptable? .... Yes No [✓ N/A]

Comments: 95 - all surr low ~~[illegible]~~ volatile + terphenyl - J all   No PES

MS - 1111   MSD - 1111 - J all

Surr - MO - J - 77   No MO   MS, MSD or LCS - J all

GC/MS ORGANIC DATA VALIDATION CHECKLIST

5. PRECISION (Levels C, D, and E)

MS/MSD samples analyzed? .... [✓ Yes] No N/A
MS/MSD RPD values acceptable? .... Yes [✓ No] N/A
MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]
MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]
Field duplicate RPD values acceptable? .... [✓ Yes] No N/A
Field split RPD values acceptable? .... Yes No [✓ N/A]
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]
Comments: hexachlorocyclopentadiene - no RPD 3,3'-dichlorobenzidine - no RPD 4-nitrophenol - 45% pentachlorophenol (44%) - J all
MW - No MS/MSD - J all

6. SYSTEM PERFORMANCE (Levels D and E)

Internal standards analyzed? .... Yes No [✓ N/A]
Internal standard areas acceptable? .... Yes No [✓ N/A]
Internal standard retention times acceptable? .... Yes No [✓ N/A]
Standards traceable? .... Yes No [✓ N/A]
Standards expired? .... Yes No [✓ N/A]
Transcription/calculation errors? .... Yes No [✓ N/A]
Comments:

7. HOLDING TIMES (all levels)

Samples properly preserved? .... [✓ Yes] No N/A
Sample holding times acceptable? .... [✓ Yes] No N/A
Comments:

GC/MS ORGANIC DATA VALIDATION CHECKLIST

8. COMPOUND IDENTIFICATION, QUANTITATION, AND DETECTION LIMITS (all levels)

Compound identification acceptable? (Levels D, E) .... Yes No [✓ N/A]
Compound quantitation acceptable? (Levels D, E) .... Yes No [✓ N/A]
Results reported for all requested analyses? .... [✓ Yes] No N/A
Results supported in the raw data? (Levels D, E) .... Yes No [✓ N/A]
Samples properly prepared? (Levels D, E) .... Yes No [✓ N/A]
Laboratory properly identified and coded all TIC? (Levels D, E) .... Yes No [✓ N/A]
Detection limits meet RDL? .... Yes [✓ No] N/A
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]
Comments: all [illegible]

9. SAMPLE CLEANUP (Levels D and E)

GPC cleanup performed? .... Yes No [✓ N/A]
GPC check performed? .... Yes No [✓ N/A]
GPC check recoveries acceptable? .... Yes No [✓ N/A]
GPC calibration performed? .... Yes No [✓ N/A]
GPC calibration check performed? .... Yes No [✓ N/A]
GPC calibration check retention times acceptable? .... Yes No [✓ N/A]
Check/calibration materials traceable? .... Yes No [✓ N/A]
Check/calibration materials Expired? .... Yes No [✓ N/A]
Analytical batch QC given similar cleanup? .... Yes No [✓ N/A]
Transcription/Calculation Errors? .... Yes No [✓ N/A]

INTRODUCTION

This memo presents the results of data validation on Data Package No K1525 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analysis
J18177	2/3/09	Solid	C	See note 1
J18198	2/3/09	Solid	C	See note 1

1 Volatiles by 8260C

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6 Additional Date Requested by Client

DATA QUALITY OBJECTIVES

- **Holding Times & Sample Preservation**

Analytical holding times were assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows. Samples must be extracted and analyzed within 14 days of the date of sample collection.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two
times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Method Blanks**

Method blank analyses are conducted to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. Analytical results for analytes present in any sample at less than five times the concentration of that analyte found in the associated blank are qualified as non-detects and flagged "U". Common laboratory contaminants present in samples at less than ten times the concentration of that analyte found in the associated blank are qualified as non-detects. If a sample result is less than the CRQL and is less than five times (or less than ten times for lab contaminants) the highest associated blank result, the sample result value is raised to the CRQL level and qualified as undetected "U".

Due to method blank contamination, all detected methylene chloride results (except J18198, J180W8-A, J180W9-A, J17W10, J17W14, J17VY4) were either raised to the RQL, qualified as undetected and flagged "U" (if less than the RQL) or qualified as undetected and flagged "U" (if over the RQL).

All other method blank results were acceptable.

Field Blanks

Three field (trip) blanks (J17W14, J17VY4 & J17W10) were submitted for analysis. Methylene chloride was detected in all field blanks. Under the WCH statement of work, no qualification is required. No other analytes were detected in the field blank.

· **Accuracy**

Matrix Spike/Matrix Spike Duplicate & Blank Spike Recoveries

Matrix spike/matrix spike duplicate analyses are used to assess the analytical accuracy of the reported data and the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike/matrix spike duplicate analyses are performed in duplicate using five compounds for which percent recoveries must be within a range of 50-150% or within laboratory control limits. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Undetected sample results with spike recoveries below control limits are qualified as estimates and flagged "UJ". Undetected sample results are not qualified if the spike recovery is above control limits. Sample results greater than five times the spike concentration require no qualification.

Due to the lack of a matrix spike and matrix spike duplicate analysis, all volatile organic results (except J18198, J180W8-A, J180W9-A, J17W10, J17W14, J17VY4) were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Surrogate Recovery

The analyses of surrogate compounds provide a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the EPA CLP program. If two surrogates of the same class of compounds (base/neutral or acid) are out of control limits, all associated sample results greater than the contract required quantitation limit (CRQL) are qualified as estimates and flagged "J". Sample results less than the CRQL and below the lower control limit are qualified as estimates and flagged "UJ". Sample results less than the CRQL with recoveries above the upper control limit require no qualification. If a surrogate recovery is less than 10%, detects are qualified as estimates and flagged "J" and nondetects are rejected and flagged "UR".

All surrogate results were acceptable

Precision

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike (MS)/matrix spike duplicate (MSD) results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed by the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. Samples results must be within RPD limits of +/-30%. If RPD values are out of specification and the sample

concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

Due to the lack of a matrix spike and matrix spike duplicate analysis, all volatile organic results (except J18198, J180W8-A, J180W9-A, J17W10, J17W14, J17VY4) were qualified as estimates and flagged "J".

All other precision results were acceptable

Field Duplicate Samples

Two sets of field duplicates (J18177/J17VP0 & J17V87/J17VP5) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All field duplicates results were acceptable.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQL's) to ensure that laboratory detection levels meet the required criteria. One-hundred thirty-four results exceeded the RQL. Under the WCH statement of work, no qualification is required. All other analytes met the RQL.

- **Completeness**

Data package No. K1525 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to method blank contamination, all detected methylene chloride results (except J18198, J180W8-A, J180W9-A, J17W10, J17W14, J17VY4) were either raised to the RQL, qualified as undetected and flagged "U" (if less than the RQL) or qualified as undetected and flagged "U" (if over the RQL)

- Due to the lack of a matrix spike and matrix spike duplicate analysis, all volatile organic results (except J18198, J180W8-A, J180W9-A, J17W10, J17W14, J17VY4) were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

One-hundred thirty-four results exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the same quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

VOLATILE ORGANIC DATA QUALIFICATION SUMMARY*

SDG: K1525	**REVIEWER: ELR**	**Project: RCBRA**	**QC Issue**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Methylene chloride	U at RQL	J17V87, J17V88 J17V92, J17VP0 J17VP5	Method blank contamination
Methylene chloride	U	J18177, J18199 J181B0, J181B1 J181B2, J181B3 J17V89, J17V90 J17V91	Method blank contamination
All	J	J17V87, J17V88 J17V92, J17VP0 J17VP5, J18177 J18199, J181B0 J181B1, J181B2 J181B3, J17V89 J17V90, J17V91	No MS or MSD analysis

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Laboratory Narrative and Chain-of-Custody Documentation

Case Narrative

Client: WC-HANFORD RC-116
LVL #: 0902012
SDG/SAF # RC-116 KIS 2-5

W.O. #: 60049-001-001-0001-00
Date Received: 02-05-2009

GC/MS VOLATILE

Twenty (20) solid samples were collected on 02-02,03-2009.

The samples and associated QC samples were analyzed according to criteria set forth in Lionville Laboratory SOPs based on EPA Method 8260B and Soil Method 5030A for TCL Volatile target compounds on 02-09,10-2009.

The following is a summary of QC results accompanying the sample results. All samples are reported on a wet weight basis. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. Samples were analyzed within hold time.
2. Non-target compounds were detected in these samples.
3. All surrogate recoveries were within acceptance criteria.
4. Six (6) of sixty-eight (68) matrix spike recoveries were outside acceptance criteria.
5. All blank spike recoveries were within acceptance criteria.
6. The method blanks were below the reporting limit for all target compounds.
7. All internal standard area and retention time criteria were met.
8. Manual integrations are performed according to SOP QA-125 to produce quality data with utmost integrity. All manual integrations are required to be technically valid and properly documented. Appropriate technical flags are defined in the Glossary ("Technical Flags For Manual Integration").
9. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager

10. "I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

Iain Daniels

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Technical verification documentation present? .... [✓ Yes] No N/A

Comments:

2. INSTRUMENT TUNING AND CALIBRATION (Levels D and E)

GC/MS tuning/performance check acceptable? .... Yes No [✓ N/A]

Initial calibrations acceptable? .... Yes No [✓ N/A]

Continuing calibrations acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

Calculation check acceptable? .... Yes No [✓ N/A]

Comments:

GC/MS ORGANIC DATA VALIDATION CHECKLIST

3. BLANKS (Levels B, C, D, and E)

Calibration blanks analyzed? (Levels D, E) .... Yes No [✓ N/A]

Calibration blank results acceptable? (Levels D, E) .... Yes No [✓ N/A]

Laboratory blanks analyzed? .... [✓ Yes] No N/A

Laboratory blank results acceptable? .... Yes [✓ No] N/A

Field/trip blanks analyzed? (Levels C, D, E) .... [✓ Yes] No N/A

Field/trip blank results acceptable? (Levels C, D, E) .... Yes [✓ No] N/A

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: (33) 95-85 - [illegible] [illegible] RAL or just U - methylene chloride

14, Y4+10 - FB - MC [illegible] in all

4. ACCURACY (Levels C, D, and E)

Surrogates/system monitoring compounds analyzed? .... [✓ Yes] No N/A

Surrogate/system monitoring compound recoveries acceptable? .... [✓ Yes] No N/A

Surrogates traceable? (Levels D, E) .... Yes No [✓ N/A]

Surrogates expired? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD samples analyzed? .... [✓ Yes] No N/A

MS/MSD results acceptable? .... [✓ Yes] No N/A

MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD standards? (Levels D, E) .... Yes No [✓ N/A]

LCS/BSS samples analyzed? .... [✓ Yes] No N/A

LCS/BSS results acceptable? .... [✓ Yes] No N/A

Standards traceable? (Levels D, E) .... Yes No [✓ N/A]

Standards expired? (Levels D, E) .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Performance audit sample(s) analyzed? .... Yes [✓ No] N/A

Performance audit sample results acceptable? .... Yes No [✓ N/A]

Comments: No MS or MSD - 99, 00, 01, 02, 03, 87, 88, 89, 90, 91, 92, 90, 95 - [illegible] & 177

No PAS

GC/MS ORGANIC DATA VALIDATION CHECKLIST

5. PRECISION (Levels C, D, and E)

MS/MSD samples analyzed? .... [✓ Yes] No N/A

MS/MSD RPD values acceptable? .... [✓ Yes] No N/A

MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]

Field duplicate RPD values acceptable? .... [✓ Yes] No N/A

Field split RPD values acceptable? .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: (37) 99-95 – no MS/MSD – J all

6. SYSTEM PERFORMANCE (Levels D and E)

Internal standards analyzed? .... Yes No [✓ N/A]

Internal standard areas acceptable? .... Yes No [✓ N/A]

Internal standard retention times acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

Transcription/calculation errors? .... Yes No [✓ N/A]

Comments:

7. HOLDING TIMES (all levels)

Samples properly preserved? .... [✓ Yes] No N/A

Sample holding times acceptable? .... [✓ Yes] No N/A

Comments:

GC/MS ORGANIC DATA VALIDATION CHECKLIST

8. COMPOUND IDENTIFICATION, QUANTITATION, AND DETECTION LIMITS (all levels)

Compound identification acceptable? (Levels D, E) .... Yes No [✓ N/A]
Compound quantitation acceptable? (Levels D, E) .... Yes No [✓ N/A]
Results reported for all requested analyses? .... [✓ Yes] No N/A
Results supported in the raw data? (Levels D, E) .... Yes No [✓ N/A]
Samples properly prepared? (Levels D, E) .... Yes No [✓ N/A]
Laboratory properly identified and coded all TIC? (Levels D, E) .... Yes No [✓ N/A]
Detection limits meet RDL? .... Yes [✓ No] N/A
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments Pb cont
134

9. SAMPLE CLEANUP (Levels D and E)

GPC cleanup performed? .... Yes No [✓ N/A]
GPC check performed? .... Yes No [✓ N/A]
GPC check recoveries acceptable? .... Yes No [✓ N/A]
GPC calibration performed? .... Yes No [✓ N/A]
GPC calibration check performed? .... Yes No [✓ N/A]
GPC calibration check retention times acceptable? .... Yes No [✓ N/A]
Check/calibration materials traceable? .... Yes No [✓ N/A]
Check/calibration materials Expired? .... Yes No [✓ N/A]
Analytical batch QC given similar cleanup? .... Yes No [✓ N/A]
Transcription/Calculation Errors? .... Yes No [✓ N/A]

Project: Columbia River Component of the RCBRA -- Sediment
Subject: Radiochemistry - Data Package No K1525-EB

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1525 prepared by Eberline Services (EB). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Anaysis
J17V87	12/8/08	Solid	C	See note 1
J17V88	12/8/08	Solid	C	See note 1
J17V89	12/8/08	Solid	C	See note 1
J17V90	12/8/08	Solid	C	See note 1
J17V91	12/8/08	Solid	C	See note 1
J17V92	12/8/08	Solid	C	See note 1
J17VP0	12/8/08	Solid	C	See note 1
J17VP5	12/8/08	Solid	C	See note 1
J18177	12/8/08	Solid	C	See note 1
J18198	12/8/08	Solid	C	See note 1
J18199	12/8/08	Solid	C	See note 1
J181B0	12/8/08	Solid	C	See note 1
J181B1	12/8/08	Solid	C	See note 1
J181B2	12/8/08	Solid	C	See note 1
J181B3	12/8/08	Solid	C	See note 1

1 – Carbon-14, total strontium, technetium-99, alpha spectroscopy and gamma spectroscopy

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Holding times are calculated from Chain-of-Custody forms to determine the validity of the results. The maximum holding time for radiochemical analysis is 6 months.

All holding times were acceptable.

- **Preparation (Method) Blanks**

Laboratory Blanks

Blank samples are analyzed to determine if positive results are due to laboratory reagent, sample container, or detector contamination. If blank analysis results indicate the presence of an analyte above the minimum detectable activity (MDA), the following qualifiers are applied: All positive sample results less than five times the highest blank concentration are qualified as estimates and flagged "J"; sample results below the MDA are qualified as undetected and flagged "U"; sample results above the MDA and greater than five times the highest blank concentration are not qualified.

All blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Accuracy is evaluated from laboratory control sample (LCS) or blank spike sample (BSS) batch samples and spiked samples from the analytical batch. Measured activities are compared to the known added amounts. The acceptable LCS or BSS and matrix spike (MS) recovery range is 70-130%. In addition, samples may be spiked with a radiochemical tracer to assist in isolating the radioisotope of interest with the yield of the tracer being used in calculating sample activity. The acceptable range for tracer recovery is 20% to 105%. Spike sample results outside the above ranges result in associated sample results being qualified as estimates, or not qualified, depending on the activity of the individual sample. Results are rejected for LCS/BSS recoveries of less than 30% and tracer recoveries of less than 20%, and tracer recoveries of greater than 115% for detected results.

Due to the lack of an LCS analysis, all thorium-228 (aspec) and thorium-232 (aspec) results were qualified as estimates and flagged "J".

Due to the lack of a matrix spike analysis, all carbon-14 results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Laboratory Duplicates

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the contract required detection limit (CRDL) and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All duplicate results were acceptable.

Field Duplicates

One set of field duplicates (J18177/J17VP0) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All field duplicates results were acceptable.

Detection Levels

Reported analytical detection levels for undetected analytes are compared against the project RQLs to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

Completeness

Data package No. K1525 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiency was noted:

- Due to the lack of an LCS analysis, all thorium-228 (aspec) and thorium-232 (aspec) results were qualified as estimates and flagged "J".
- Due to the lack of a matrix spike analysis, all carbon-14 results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH statement of work are as follows

U - Indicates the compound or analyte was analyzed for and not detected above the minimum detectable activity (MDA) in the sample. The value reported is the sample result corrected for sample dilution and moisture content by the laboratory. The data is usable for decision making purposes.

UJ - Indicates the compound or analyte was analyzed for and not detected at concentrations above the minimum detectable activity (MDA) in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate, but is usable for decision making purposes.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

Appendix 2

Summary of Data Qualification

RADIOCHEMISTRY DATA QUALIFICATION SUMMARY*

SDG: K1525	**REVIEWER:** ELR	**Project:** RCBRA	**QC Issue**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Thorium-228 Thorium-232	J	All	No LCS analysis
Carbon-14	J	All	No MS analysis

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Washington Closure Hanford
SDG K1525

Case Narrative **Page 1 of 1**

1.0 GENERAL

Washington Closure Hanford (WCH) Sample Delivery Group K1525 was composed of fifteen solid (other solid) samples designated under SAF No. RC-116 with a Project Designation of: Columbia River Component of the RCBRA – Sediment

The samples were received as stated on the Chain-of-Custody documents. Any discrepancies are noted on the Eberline Analytical Sample Receipt Checklist. The results were sent to WCH via e-mail March 11, 2009.

2.0 ANALYSIS NOTES

2.1 Carbon-14 Analysis

No problems were encountered during the course of the analyses.

2.2 Strontium-90 Analysis

No problems were encountered during the course of the analyses.

2.3 Technetium-99 Analysis

No problems were encountered during the course of the analyses.

2.4 Isotopic Thorium Analysis

No problems were encountered during the course of the analyses.

2.5 Isotopic Uranium Analysis

No problems were encountered during the course of the analyses.

2.6 Isotopic Plutonium Analysis

No problems were encountered during the course of the analyses.

2.7 Gamma Spectroscopy

No problems were encountered during the course of the analyses

3.0 Case Narrative Certification Statement

"I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data obtained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

3/11/09

Date: 8 December 2009
To: Washington Closure Hanford (technical representative)
From: ELR Consultants
Project: Columbia River Component of the RCBRA - Sediment
Subject: PCB/Pesticide - Data Package No. K1525-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1525 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Anaysis
J18157-A	2/2/09	Solid	C	See note 1
J18158-A	2/2/09	Solid	C	See note 1
J18159-A	2/2/09	Solid	C	See note 1
J18160-A	2/2/09	Solid	C	See note 1
J18177	2/3/09	Solid	C	See note 1 & 2
J18198	2/3/09	Solid	C	See note 1 & 2
J18199	2/3/09	Solid	C	See note 1 & 2
J181B0	2/3/09	Solid	C	See note 1 & 2
J181B1	2/3/09	Solid	C	See note 1 & 2
J181B2	2/3/09	Solid	C	See note 1 & 2
J181B3	2/3/09	Solid	C	See note 1 & 2
J17V87	2/3/09	Solid	C	See note 1 & 2
J17V88	2/3/09	Solid	C	See note 1 & 2
J17V89	2/3/09	Solid	C	See note 1 & 2
J17V90	2/3/09	Solid	C	See note 1 & 2
J17V91	2/3/09	Solid	C	See note 1 & 2
J17V92	2/3/09	Solid	C	See note 1 & 2
J17VP0	2/3/09	Solid	C	See note 1 & 2
J17VP5	2/3/09	Solid	C	See note 1 & 2
J180W8-A	2/2/09	Solid	C	See note 1 & 2
J180W9-A	2/2/09	Solid	C	See note 1 & 2

1 – PCBs by 8082 and
2 - Pesticides by 8081A.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY OBJECTIVES

- **Holding Times & Sample Preservation**

Sample data were assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be extracted within 14 days of the date of sample collection and analyzed within 40 days from the date of extraction.

If holding times are exceeded by less than or equal to twice times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detected sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Method Blank**

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation or analysis. At least one method blank analysis must be conducted for every 20 samples. Method blanks should not contain target compounds at a concentration greater than required quantitation limit (RQL). If target compounds are present, sample results less than five times the blank concentration are qualified as undetected and flagged "U". If the sample result is less than five times the blank concentration and less than RQL, the result is qualified as undetected and elevated to the RQL.

All method blank results were acceptable.

Field Blanks

No field blanks were submitted for analysis

- **Accuracy**

Matrix Spike & Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 50% to 150%. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Non-detected sample results with spike recoveries outside control limits are qualified as estimates and flagged "UJ". Sample results greater than five times the spike concentration require no qualification.

Due to the lack of a matrix spike, matrix spike duplicate and LCS analysis, all toxaphene results were qualified as estimates and flagged "J".

All accuracy results were acceptable.

Surrogate Recovery

The analysis of surrogate compounds provides a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the laboratory. When a surrogate compound recovery is outside the control window, all positively identified target compounds associated with the unacceptable surrogate recoveries are qualified as estimates and flagged "J". Non-detected compounds with surrogate recoveries less than the lower control limit are qualified as having an estimated detection limit and flagged "UJ". Non-detected compounds with surrogate recoveries above the upper control limit require no qualification.

Due to surrogate recoveries outside QC limits (175% & 142%), the aroclor-1260 result in sample J18157-A was qualified as an estimate and flagged "J".

All other surrogate results were acceptable.

- **Precision**

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike/matrix spike duplicate results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed as the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. For soil samples, results must be within RPD limits of plus/minus 30%. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

Due to RPDs outside QC limits, the endosulfan II (45%) and 4,4-DDD (34%) results in sample J180W9-A were qualified as estimates and flagged "J".

Due to the lack of a matrix spike and matrix spike duplicate analysis, all toxaphene results were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

One set of field duplicates (J18177/J17VP0) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All field duplicates results were acceptable.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the project specific RQLs to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data Package No. K1525 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 0%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to the lack of a matrix spike, matrix spike duplicate and LCS analysis, all toxaphene results were qualified as estimates and flagged "J".
- Due to surrogate recoveries outside QC limits (175% & 142%), the aroclor-1260 result in sample J18157-A was qualified as an estimate and flagged "J".
- Due to RPDs outside QC limits, the endosulfan II (45%) and 4,4-DDD (34%) results in sample J180W9-A were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the procedures herein are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

PCB/PESTICIDE DATA QUALIFICATION SUMMARY*

SDG: K1525	**REVIEWER: ELR**	**Project: RCBRA**	**QC Issue**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Endosulfan II 4,4-DDD	J	J180W9-A	RPD
Aroclor-1016	J	J18157-A	Surrogate recovery
Toxaphene	J	All	No MS, MSD or LCS analysis

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Case Narrative
*****REVISION*****

This narrative is issued to revise item 5, where matrix QC is associated with client SDG# K1524.

Client: WC HANFORD RC-116
LVL #: 0902012
SDG/SAF # K1525 / RC-116

W.O. #: 60049-001-001-0001-00
Date Received: 02-05-2009

PCBs

Twenty-one (21) solid samples were collected on 02-02,03-2009.

The samples and associated QC samples were extracted on 02-12-2009 and analyzed according to Lionville Laboratory SOPs based on SW846, 3rd Edition procedure on 02-24,25-2009. The extraction procedure was based on method 3540C and the extracts were analyzed based on method 8082.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise. The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LVL) certifies that all test results meet the requirements of NELAC except as noted below:

1. All required holding times for extraction and analysis have been met.
2. The samples and their associated QC samples received Copper-Sulfur and Sulfuric Acid cleanups according to Lionville Laboratory SOPs based on SW846 methods 3660A and 3665A respectively.
3. The method blanks were below the reporting limits for all target compounds.
4. Two (2) of fifty (50) surrogate recoveries were outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR# 09GC023) has been enclosed.
5. All blank spike recoveries were within acceptance criteria.
6. Matrix QC analyses are associated with WCH SDG# K1524 (LVL# 0902010).
7. All initial calibrations associated with this data set were within acceptance criteria.
8. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.

Lionville Laboratory Sample Discrepancy Report (SDR)

SDR #: 0909C-023

Initiator: C.AR
Date: 03/08/09
Client: WC Hanford

Batch: 0902012
Samples: 001
Method: SW846/MCAWW/CLP

Parameter: PCB
Matrix: Solid
Prep Batch: L0902089

1. Reason for SDR

a. COC Discrepancy
Tech Profile Error
__ Transcription Error
__ Client Request
Wrong Test Code
Sampler Error on C-O-C
__ Other __________

b. General Discrepancy
__ Missing Sample/Extract*
__ Hold Time Exceeded
__ Improper Bottle Type
__ Container Broken
__ Insufficient Sample*
Not Amenable to Analysis
__ Wrong Sample Pulled
Preservation Wrong
__ Label ID's Illegible
__ Received Past Hold

Note* Verified by [Log-in] or [Prep Group] (circle). signature/date __________

c. Problem (include all relevant specific results, attach data if necessary)

both surrogate recoveries are high

2. Known or Probable Causes(s)

3. Discussion and Proposed Action
__ Re-log
Entire Batch
__ Following Samples: ______
Re-leach
__ Re-extract
Re-digest
__ Revise EDD
Change Test Code to ______
__ Place On/Take Off Hold (circle)

Other Description:
No hits above Reporting Limit
Narrate.

4. Project Manager Instructions signature/date 4/9/09
✓ Concur with Proposed Action

Case Narrative

REVISION

This narrative is issued to revise item 5, where matrix QC is associated with client SDG# K1524.

Client: WC HANFORD RC-116
LVL #: 0902012
SDG/SAF # K1525 /RC-116

W.O. #: 60049-001-001-0001-00
Date Received: 02-05-2009

CHLORINATED PESTICIDES

Seventeen (17) solid samples were collected on 02-02,03-2009.

The samples and their associated QC samples were extracted on 02-12-2009 and analyzed according to Lionville Laboratory SOPs based on SW846, 3rd Edition procedure on 02-27-2009 and 03-06,07,12-2009. The extraction procedure was based on method 3540C and the extracts were analyzed based on method 8081A.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise. The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. All required holding times for extraction and analysis have been met.
2. The method blanks were below the reporting limits for all target compounds.
3. All obtainable surrogate recoveries were within acceptance criteria.
4. One (1) of forty (40) blank spike recoveries was outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR# 09GC045) has been enclosed.
5. Matrix QC analyses are associated with WCH SDG# K1524 (LVL# 0902010).
6. All samples required a 10-fold instrument dilution due to matrix.
7. All initial calibrations associated with this data set were within acceptance criteria.
8. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.

Lionville Laboratory Sample Discrepancy Report (SDR)

SDR #: 0960015

Initiator: [illegible]
Date: 10/09/09
Client: [illegible]
Batch: 090P013
Samples: All
Method: SW846/MCAWW/CLP
Parameter: Pest
Matrix: Solid
Prep Batch: 0960089

1. Reason for SDR

a. COC Discrepancy
- __ Tech Profile Error
- __ Transcription Error
- Client Request
- __ Wrong Test Code
- __ Sampler Error on C-O-C
- __ Other

b. General Discrepancy
- Missing Sample/Extract*
- __ Hold Time Exceeded
- __ Improper Bottle Type
- __ Container Broken
- __ Insufficient Sample*
- Not Amenable to Analysis
- __ Wrong Sample Pulled
- Preservation Wrong
- __ Label ID's Illegible
- __ Received Past Hold

Note* Verified by (Log-In) or (Prep Group) (circle) signature/date

c. Problem (Include all relevant specific results; attach data if necessary)

Recovery of Beta-BHC is high in the LCS

2. Known or Probable Causes(s)

3. Discussion and Proposed Action
- __ Re-log
  - _ Entire Batch
  - _ Following Samples
- Re-leach
- __ Re-extract
- Re-digest
- __ Revise EDD
- Change Test Code to
- __ Place On/Take Off Hold (circle)

Other Description:

Narrate

No Beta BHC in any sample.

4. Project Manager Instructions signature/date 11/13/09
- ✓ Concur with Proposed Action
- __ Disagree with Proposed Action; See Instruction
- ✓ Include in Case Narrative
- __ Client Contacted:
- Date/Person
- __ Add
- Cancel

5. Final Action signature/date 11/13/09
- __ Verified re-(log)(leach)(extract)(digest)(analysis) (circle)
- ✓ Included in Case Narrative
- Hard Copy COC Revised
- __ Electronic COC Revised
- EDD Corrections Completed

Other Explanation

When Final Action has been recorded, forward original to QA for diposition.

solid

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Technical verification documentation present? .... Yes [✓ No] N/A

Comments: ____________________

2. INSTRUMENT PERFORMANCE AND CALIBRATIONS (Levels D and E)

Initial calibrations acceptable? .... Yes No [✓ N/A]

Continuing calibrations acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

Calculation check acceptable? .... Yes No [✓ N/A]

DDT and endrin breakdowns acceptable? .... Yes No [✓ N/A]

Comments: ____________________

PCB DATA VALIDATION CHECKLIST

3. BLANKS (Levels B, C, D, and E)

Calibration blanks analyzed? (Levels D, E) .... Yes No [✓ N/A]

Calibration blank results acceptable? (Levels D, E) .... Yes No [✓ N/A]

Laboratory blanks analyzed? .... [✓ Yes] No N/A

Laboratory blank results acceptable? .... [✓ Yes] No N/A

Field/trip blanks analyzed? (Levels C, D, E) .... Yes [✓ No] N/A

Field/trip blank results acceptable? (Levels C, D, E) .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: No FB

4. ACCURACY (Levels C, D, and E)

Surrogates analyzed? .... [✓ Yes] No N/A

Surrogate recoveries acceptable? .... Yes [✓ No] N/A

Surrogates traceable? (Levels D, E) .... Yes No [✓ N/A]

Surrogates expired? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD samples analyzed? .... [✓ Yes] No N/A

MS/MSD results acceptable? .... [✓ Yes] No N/A

MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]

LCS/BSS samples analyzed? .... [✓ Yes] No N/A

LCS/BSS results acceptable? .... [✓ Yes] No N/A

Standards traceable? (Levels D, E) .... Yes No [✓ N/A]

Standards expired? (Levels D, E) .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Performance audit sample(s) analyzed? .... Yes [✓ No] N/A

Performance audit sample results acceptable? .... Yes No [✓ N/A]

Comments: [illegible] - 1200 - 3 (surrogate) 57%

no [illegible] MS, MSD or LCS

[illegible]

PCB DATA VALIDATION CHECKLIST

5. PRECISION (Levels C, D, and E)

Duplicate RPD values acceptable? .... Yes [✓ No] N/A
Duplicate results acceptable? .... Yes [✓ No] N/A
MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]
MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]
Field duplicate RPD values acceptable? .... [✓ Yes] No N/A
Field split RPD values acceptable? .... Yes No [✓ N/A]
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: J1E127 [illegible] = 4,4-DDD = 115% > J both J1E5[illegible]
Endosulfan II = 37%
no exception MS/MSD = J all

6. SYSTEM PERFORMANCE (Levels D and E)

Chromatographic performance acceptable? .... Yes No [✓ N/A]
Positive results resolved acceptably? .... Yes No [✓ N/A]

Comments:

7. HOLDING TIMES (all levels)

Samples properly preserved? .... [✓ Yes] No N/A
Sample holding times acceptable? .... [✓ Yes] No N/A

Comments:

PCB DATA VALIDATION CHECKLIST

8. COMPOUND IDENTIFICATION, QUANTITATION, AND DETECTION LIMITS (all levels)

Compound identification acceptable? (Levels D, E) ... Yes No [✓ N/A]

Compound quantitation acceptable? (Levels D, E) ... Yes No [✓ N/A]

Results reported for all requested analyses? ... [✓ Yes] No N/A

Results supported in the raw data? (Levels D, E) ... Yes No [✓ N/A]

Samples properly prepared? (Levels D, E) ... ~~Yes~~ No [✓ N/A]

Detection limits meet RDL? ... [✓ Yes] No N/A

Transcription/calculation errors? (Levels D, E) ... Yes No [✓ N/A]

Comments:

9. SAMPLE CLEANUP (Levels D and E)

Florisil ® (or other absorbent) cleanup performed? ... Yes No [✓ N/A]

Lot check performed? ... Yes No [✓ N/A]

Check recoveries acceptable? ... Yes No [✓ N/A]

GPC cleanup performed? ... Yes No [✓ N/A]

GPC check performed? ... Yes No [✓ N/A]

GPC check recoveries acceptable? ... Yes No [✓ N/A]

GPC calibration performed? ... Yes No [✓ N/A]

GPC calibration check performed? ... Yes No [✓ N/A]

GPC calibration check retention times acceptable? ... Yes No [✓ N/A]

Check/calibration materials traceable? ... Yes No [✓ N/A]

Check/calibration materials Expired? ... Yes No [✓ N/A]

Analytical batch QC given similar cleanup? ... Yes No [✓ N/A]

Transcription/Calculation Errors? ... Yes No [✓ N/A]

SAF-RC-116
Columbia River Component of the RCBRA – Sediment
FINAL VALIDATION PACKAGE

COMPLETE COPY OF VALIDATION PACKAGE TO:

Kathy Wendt H4-21

COMMENTS:

SDG K1540 **SAF-RC-116**

Date: 7 December 2009
To: Washington Closure Hanford (technical representative)
From: ELR Consultants
Project: Columbia River Component of the RCBRA - Sediment
Subject: Semivolatile/DRO - Data Package No. K1540-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1540 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Anaysis
J18610	2/12/09	Solid	C	See note 1
J18794	2/12/09	Solid	C	See note 1
J18795	2/12/09	Solid	C	See note 1
J18796	2/12/09	Solid	C	See note 1

J187D5	2/12/09	Solid	C	See note 1
J187K6	2/12/09	Solid	C	See note 1
J187K7	2/12/09	Solid	C	See note 1
J17X03	2/12/09	Solid	C	See note 1
J187Y2	2/12/09	Solid	C	See note 1

1 - Semivolatiles by 8270 & diesel range organics by 8015B.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY OBJECTIVES

Holding Times & Sample Preservation

Analytical holding times were assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Samples must be extracted within 14 days of the date of sample collection and analyzed within 40 days from the date of extraction

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

Due to the holding time being exceeded by less than twice the limit, all motor oil and diesel range organic results were qualified as estimates and flagged "J".

All other holding times were acceptable.

- **Method Blanks**

Method blank analyses are conducted to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank Analytical results for analytes present in any sample at less than five times the concentration of that analyte found in the associated blank are qualified as non-detects and flagged "U". Common laboratory contaminants present in samples at less than ten times the concentration of that analyte found in the associated blank are qualified as non-detects. If a sample result is less than the CRQL and is less than five times (or less than ten times for lab contaminants) the highest associated blank result, the sample result value is raised to the CRQL level and qualified as undetected "U".

Due to method blank contamination, all motor oil results were qualified as undetected and flagged "U".

All other method blank results were acceptable.

Field Blanks

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike/Matrix Spike Duplicate & Blank Spike Recoveries

Matrix spike/matrix spike duplicate analyses are used to assess the analytical accuracy of the reported data and the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike/matrix spike duplicate analyses are performed in duplicate using five compounds for which percent recoveries must be within a range of 50-150% or within laboratory control limits. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Undetected sample results with spike recoveries below control limits are qualified as estimates and flagged "UJ". Undetected sample results are not qualified if the spike recovery is above control limits. Sample results greater than five times the spike concentration require no qualification.

Due to the lack of a matrix spike, matrix spike duplicate and LCS analysis, all motor oil results were qualified as estimates and flagged "J".

Due to matrix spike recoveries outside QC limits, all semivolatile results (except 4-chloro-3-methylphenol, 4-nitrophenol, butyl benzyl phthalate and di-n-octyl phthalate) results were qualified as estimates and flagged "J"

Due to matrix spike duplicate recoveries outside QC limits, all bis(2-chloroethyl)ether (46%), 1,3-dichlorobenzene (45%), 1,4-dichlorobenzene (40%), 1,2-dichlorobenzene (40%), bis(2-chloroisopropyl)ether (43%), hexachloroethane (41%), isophorone (44%), 2,4-dimethylphenol (48%), 1,2,4-trichlorobenzene (48%), naphthalene (48%), 4-chloroanaline (32%), hexachlorocyclopentadiene (22%), n-nitrosodiphenylamine (49%), 3,3-dichlorobenzidine (17%), ideno(1,2,3-cd)pyrene (49%) and benzo(g,h,i)perylene (46%) results were qualified as estimates and flagged "J".

Due to an LCS recovery outside QC limits, all 2,4-dinitrophenol (32%), pyrene (44%), nitrobenzene (46%), isophorone (45%), 2-nitrophenol (47%), 2,4-dimethylphenol (42%), 1,2,4-trichlorobenzene (48%), naphthalene (49%), 4-chloroanaline (37%) and hexachlorocyclopentadiene (26%) results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Surrogate Recovery

The analyses of surrogate compounds provide a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the EPA CLP program. If two surrogates of the same class of compounds (base/neutral or acid) are out of control limits, all associated sample results greater than the contract required quantitation limit (CRQL) are qualified as estimates and flagged "J". Sample results less than the CRQL and below the lower control limit are qualified as estimates and flagged "UJ". Sample results less than the CRQL with recoveries above the upper control limit require no qualification. If a surrogate recovery is less than 10%, detects are qualified as estimates and flagged "J" and nondetects are rejected and flagged "UR".

Due to surrogate recoveries outside QC limits, all semivolatile results in sample J187Y2 (except naphthalene, acenaphthylene, acenaphthene, fluorene, phenanthrene, anthracene, fluoranthene, pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthrene, benzo(*k*)fluoranthene, benzo(a)pyrene, indeno(1,2,3-c,*d*)pyrene and benzo(g,h,i)perylene) were qualified as estimates and flagged "J" All other surrogate results were acceptable.

- Precision

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike (MS)/matrix spike duplicate (MSD) results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed by the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. Samples results must be within RPD limits of +/-30%. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

Due to RPDs outside QC limits, all semivolatile results (except bis(2-chloroethyl)ether, bis(2-chloroisopropyl)ether, *n*-nitrosodi-n-propylamine, 2,4-dimethylphenol and pyrene) were qualified as estimates and flagged "J".

Due to the lack of a matrix spike and matrix spike duplicate analysis, all motor oil results were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

One set of field duplicates (J18610/J18795) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All field duplicates results were acceptable

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQL's) to ensure that laboratory detection levels meet the required criteria. Four-hundred twenty-six semivolatile analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Completeness

Data package No. K1540 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to the holding time being exceeded by less than twice the limit, all motor oil and diesel range organic results were qualified as estimates and flagged "J".
- Due to method blank contamination, all motor oil results were qualified as undetected and flagged "U".
- Due to the lack of a matrix spike, matrix spike duplicate and LCS analysis, all motor oil results were qualified as estimates and flagged "J".
- Due to matrix spike recoveries outside QC limits, all semivolatile results (except 4-chloro-3-methylphenol, 4-nitrophenol, butyl benzyl phthalate and di-n-octyl phthalate) results were qualified as estimates and flagged "J".
- Due to matrix spike duplicate recoveries outside QC limits, all bis(2-chloroethyl)ether (46%), 1,3-dichlorobenzene (45%), 1,4-dichlorobenzene (40%), 1,2-dichlorobenzene (40%), bis(2-chloroisopropyl)ether (43%), hexachloroethane (41%), isophorone (44%), 2,4-dimethylphenol (48%), 1,2,4-trichlorobenzene (48%), naphthalene (48%), 4-chloroanaline (32%), hexachlorocyclopentadiene (22%), n-nitrosodiphenylamine (49%), 3,3-dichlorobenzidine (17%), ideno(1,2,3-cd)pyrene (49%) and benzo(g,h,i)perylene (46%) results were qualified as estimates and flagged "J".
- Due to an LCS recovery outside QC limits, all 2,4-dinitrophenol (32%), pyrene (44%), nitrobenzene (46%), isophorone (45%), 2-nitrophenol (47%), 2,4-dimethylphenol (42%), 1,2,4-trichlorobenzene (48%), naphthalene (49%), 4-chloroanaline (37%) and hexachlorocyclopentadiene (26%) results were qualified as estimates and flagged "J".
- Due to surrogate recoveries outside QC limits, all semivolatile results in sample J187Y2 (except naphthalene, acenaphthylene, acenaphthene, fluorene,

phenanthrene, anthracene, fluoranthene, pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthrene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(1,2,3-c,d)pyrene and benzo(g,h,i)perylene) were qualified as estimates and flagged "J".

- Due to RPDs outside QC limits, all semivolatile results (except bis(2-chloroethyl)ether, bis(2-chloroisopropyl)ether, n-nitrosodi-n-propylamine, 2,4-dimethylphenol and pyrene) were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Four-hundred twenty-six semivolatile analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the same quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

SEMIVOLATILE/DRO ORGANIC DATA QUALIFICATION SUMMARY*

SDG: K1540	**REVIEWER: ELR**	**Project: RCBRA**	**QC Issue**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Motor oil	U	All	Method blank contamination
Motor oil	J	All	No MS, MSD or LCS analysis
Motor oil Diesel range organics	J	All	Hold time
all semivolatile results (except 4-chloro3-methylphenol, 4-nitrophenol, butyl benzyl phthalate and di-n-octyl phthalate)	J	All	MS recovery
bis(2-chloroethyl)ether 1,3-dichlorobenzene 1,4-dichlorobenzene 1,2-dichlorobenzene bis(2-chloroisopropyl)ether hexachloroethane isophorone 2,4-dimethylphenol 1,2,4-trichlorobenzene naphthalene 4-chloroanaline hexachlorocyclopentadiene n-nitrosodiphenylamine 3,3-dichlorobenzidine ideno(1,2,3-cd)pyrene benzo(g,h,i)perylene	J	All	MSD recovery
2,4-dinitrophenol pyrene nitrobenzene isophorone 2-nitrophenol 2,4-dimethylphenol 1,2,4-trichlorobenzene naphthalene 4-chloroanaline hexachlorocyclopentadiene	J	All	LCS recovery
All (except naphthalene, acenaphthylene, acenaphthene, fluorene, phenanthrene, anthracene,	J	J187Y2	Surrogate recovery

SEMIVOLATILE/DRO ORGANIC DATA QUALIFICATION SUMMARY*

SDG: K1540	REVIEWER: ELR	Project: RCBRA	QC Issue
fluoranthene, pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthrene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(1,2,3-c,d)pyrene and benzo(g,h,i)perylene)			
all semivolatile results (except bis(2-chloroethyl)ether, bis(2-chloroisopropyl)ether, n-nitrosodi-n-propylamine, 2,4-dimethylphenol and pyrene)	J	All	RPD

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

W.O. #: 60049-001-001-0001-00
Date Received: 02-14-2009

SEMIVOLATILE

Twelve (12) solid samples were collected on 02-12-2009.

The samples and their associated QC samples were extracted according to Lionville Laboratory SOPs based on SW 846 method 3540C on 02-24-2009 and analyzed according to criteria set forth in Lionville Laboratory SOPs based on SW 846 Method 8270C for TCL Semivolatile target compounds on 03-01,12,20-2009.

All solid samples are reported on a wet weight basis. The following is a summary of QC results accompanying the sample results. Lionville Laboratory (LVL) certifies that all test results meet the requirements of NELAC except as noted below:

1. All results presented in this report are derived from samples that met LvL's sample acceptance policy.
2. Samples were extracted and analyzed within the recommended holding time.
3. Non-target compounds were detected in these samples.
4. Samples J18796 and J18797 required a 2-fold dilution, and samples J187D2, J187D4, J187D5, J17X03 required a 3-fold instrument dilution due to matrix. Reporting limits have been adjusted to reflect the necessary dilutions.
5. Six (6) of seventy-eight (78) surrogate recoveries were outside acceptance criteria. However, surrogate recovery acceptance criteria were met (i.e., no more than one outlier per fraction {acid and base neutral} and no recoveries less than 10%). The surrogate recovery criteria were not met for sample J187Y2. A copy of the Sample Discrepancy Report (SDR# 09MS074) has been enclosed.
6. Seventy-eight (78) of one hundred twenty-eight (128) matrix spike recoveries were outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR# 09MS074) has been enclosed.
7. Seventeen (17) of sixty-four (64) blank spike recoveries were outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR#09MS074) has been enclosed.
8. The method blank was below the reporting limit for all target compounds.
9. All initial calibrations associated with this data set were within acceptance criteria.

10. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.

11. Internal standard area and retention time criteria were met.

12. Manual integrations are performed according to SOP QA-125 to produce quality data with the utmost integrity. All manual integrations are required to be technically valid and properly documented. Appropriate technical flags are defined in the Glossary ("Technical Flags For Manual Integration").

13. LVL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

14 I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee as verified by the following signature.

Lionville Laboratory Sample Discrepancy Report (SDR)

SDR #: 04M5024

Initiator: Robert Carden
Date: 9/9/04
Client: W. Hanford Rets
Batch: 0404117
Samples: BS/MS/MSD / J147Y2
Method: [✓ SW846]/MCAWW/CLP
Parameter: 0651H
Matrix: Solid
Prep Batch: C4J0172

1. Reason for SDR

a. COC Discrepancy
- Tech Profile Error
- Transcription Error
- Client Request
- Wrong Test Code
- Sampler Error on C-O-C
- Other

b. General Discrepancy
- Missing Sample/Extract*
- Hold Time Exceeded
- Improper Bottle Type
- Container Broken
- Insufficient Sample*
- Not Amenable to Analysis
- Wrong Sample Pulled
- Preservation Wrong
- Label ID's Illegible
- Received Past Hold

Note*: Verified by [Log-In] or [Prep Group] (circle) signature/date:

c. Problem (include all relevant specific results; attach data if necessary)

(1) Several spike recoveries outside QC acceptance criteria in BS/MS/MSD. Several spikes biased high in MSD
(2) 5 surrogates outside acceptance criteria in sample J147Y2 (A4 > 10%)

2. Known or Probable Cause(s)

(1) [illegible] phenomenon of [illegible] chromatographic behavior typically [illegible] the GC system [illegible] [illegible] (2) [illegible] during sample [illegible] J147Y2 and MS/MSD. [illegible]

3. Discussion and Proposed Action

Other Description:

[illegible]

- Re-log
  - Entire Batch
  - Following Samples:
- Re-leach
- Re-extract
- Re-digest
- Revise EDD
- Change Test Code to
- Place On/Take Off Hold (circle)

4. Project Manager Instructions

signature/date: 9/14/04

- Concur with Proposed Action
- Disagree with Proposed Action; See Instruction
- Include in Case Narrative
- Client Contacted:
  Date/Person
- Add
- Cancel

5. Final Action

signature/date: 9-14-04

- Verified re-[log][leach][extract][digest][analysis] (circle)
- ✓ Included in Case Narrative
- Hard Copy COC Revised
- Electronic COC Revised
- EDD Corrections Completed

Other Explanation.

When Final Action has been recorded, forward original to QA for disposition.

DIESEL RANGE ORGANICS

Twelve (12) other solid samples were collected on 02-12-2009.

The samples and their associated QC samples were extracted on 02-27-2009 and analyzed according to Lionville Laboratory SOPs based on SW846, 3rd Edition procedure on 03 05,06-2009. The extraction procedure was based on method 3540C and the extracts were analyzed based on method 8015B for DRO.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise. The following is a summary of QC results accompanying the sample results. Lionville Laboratory Inc (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. The samples were extracted one day outside of recommended hold time.

2. The method blank contained Motor Oil Range Organics (MRO) at a level above the Quantitation limit. Samples contained MRO in the range of 1 to 2 times the level seen in the blank, and with a similar pattern to the peaks seen in the blank. The contamination in the blank for MRO was greater than the lab PQL, although no client MRL exists for this analyte. Lab contamination of these samples should be suspected, and the data user should consider the sample values to be maximum values.

3. All obtainable surrogate recoveries were within acceptance criteria.

4. All blank spike recoveries were within acceptance criteria.

5. All matrix spike recoveries were within acceptance criteria.

6. All initial calibrations associated with this data set were within acceptance criteria.

7. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.

8. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

[illegible]

9. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the laboratory Manager or a designee, as verified by the following signature.
