SDG K1926 SAF-RC-114

Date: 12 April 2010
To: Washington Closure Hanford (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA – Pore Water – Phase III
Subject: Wet Chemistry - Data Package No. K1926-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1926 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Date
J19JD7	1/29/10	Water	C	See note 1
J19JD8	1/29/10	Water	C	See note 1
J19JD9	1/30/10	Water	C	See note 1
J19JC7	1/31/10	Water	C	See note 1
J19HN9	1/31/10	Water	C	See note 1
J19HK0	1/31/10	Water	C	See note 1
J19F74	2/1/10	Water	C	See note 1
J19HW2	2/1/10	Water	C	See note 1

1 = IC anions by 300.0, nitrate/nitrite by 353.2, total organic carbon by 415.1 and total inorganic carbon by 415.1

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times & Sample Preservation**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Samples must be analyzed within 28 days for total organic carbon, total inorganic carbon, nitrate/nitrite, chloride, fluoride, bromide and sulfate; and 48 hours for nitrate, nitrite and orthophosphate.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

Due to the samples not being properly preserved (headspace in sample containers), all total organic and total inorganic carbon results were qualified as estimates and flagged "J".

Due to the holding time being exceeded by greater than twice the limit, all detected nitrate, nitrite and orthophosphate results in samples J19JD8, J19JD7 and J19JD9 were qualified as estimates and flagged "J".

Due to the holding time being exceeded by greater than twice the limit, all undetected nitrate, nitrite and orthophosphate results in samples J19JD8, J19JD7 and J19JD9 were qualified as rejected and flagged "R"

Due to the holding time being exceeded by less than twice the limit, all nitrate, nitrite and orthophosphate results in samples J19JC7, J19HN9, J19HK0, J19F74 and J19HW2 were qualified as estimates and flagged "J".

All other holding time and sample preservation results were acceptable.

- **Method Blanks**

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

Due to method blank contamination, the total organic carbon results in samples J19HN9, J19HK0, J19F74 and J19HW2 were qualified as estimates and flagged "J".

All other method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

Accuracy

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 80% to 120%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 79% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 120% or less than 80% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

Due to a matrix spike recovery outside QC limits (73%), all nitrate/nitrite results were qualified as estimates and flagged "J".

Due to the lack of a matrix spike, all total inorganic carbon results were qualified as estimates and flagged "J".

Due to the lack of an LCS analysis, all total inorganic carbon results were qualified as estimates and flagged "J".

Due to the lack of a matrix spike analysis, the total organic carbon results in samples J19HN9, J19HK0, J19F74 and J19HW2 were qualified as estimates and flagged "J"

All other accuracy results were acceptable.

Precision

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 20%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

Due to an RPD outside QC limits (22%), all nitrate/nitrite results were qualified as estimates and flagged "J".

Due to the lack of a duplicate analysis, all total inorganic carbon were qualified as estimates and flagged "J".

Due to the lack of a duplicate analysis, the total organic carbon results in samples J19HN9, J19HK0, J19F74 and J19HW2 were qualified as estimates and flagged "J".

All other laboratory duplicate results were acceptable.

Field Duplicate

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

Completeness

Data package No. K1926 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 91%.

MAJOR DEFICIENCIES

The following major deficiency was noted:

- Due to the holding time being exceeded by greater than twice the limit, all undetected nitrate, nitrite and orthophosphate results in samples J19JD8, J19JD7 and J19JD9 were qualified as rejected and flagged "R".

Rejected data is unusable and should not be reported.

MINOR DEFICIENCIES

The following minor deficiency was noted:

- Due to the samples not being properly preserved (headspace in sample containers), all total organic and total inorganic carbon results were qualified as estimates and flagged "J".
- Due to the holding time being exceeded by greater than twice the limit, all detected nitrate, nitrite and orthophosphate results in samples J19JD8, J19JD7 and J19JD9 were qualified as estimates and flagged "J".

- Due to the holding time being exceeded by less than twice the limit, all nitrate, nitrite and orthophosphate results in samples J19JC7, J19HN9, J19HK0, J19F74 and J19HW2 were qualified as estimates and flagged "J".

- Due to a matrix spike recovery outside QC limits (73%), all nitrate/nitrite results were qualified as estimates and flagged "J".

- Due to the lack of a matrix spike, all total inorganic carbon results were qualified as estimates and flagged "J".

- Due to the lack of an LCS analysis, all total inorganic carbon results were qualified as estimates and flagged "J".

- Due to the lack of a matrix spike analysis, the total organic carbon results in samples J19HN9, J19HK0, J19F74 and J19HW2 were qualified as estimates and flagged "J".

- Due to an RPD outside QC limits (22%), all nitrate/nitrite results were qualified as estimates and flagged "J".

- Due to the lack of a duplicate analysis, all total inorganic carbon were qualified as estimates and flagged "J".

- Due to the lack of a duplicate analysis, the total organic carbon results in samples J19HN9, J19HK0, J19F74 and J19HW2 were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

WET CHEMISTRY DATA QUALIFICATION SUMMARY*

SDG: K1926	**REVIEWER: ELR**	**Project: RCBRA**	**PAGE 1 OF 1**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Total organic carbon Total inorganic carbon	J	All	Sample preservation (headspace in the sample container)
Nitrate	J	J19JD8, J19JD7	Hold time
Nitrate	UR	J19JD9	Hold time
Nitrite Orthophosphate	UR	J19JD8, J19JD7 J19JD9	Hold time
Nitrate Nitrite Orthophosphate	J	J19JC7, J19HN9 J19HK0, J19F74 J19HW2	Hold time
Nitrate/nitrite	J	All	MS recovery
Total inorganic carbon	J	All	No MS, LCS or duplicate analysis
Total organic carbon	J	J19HN9, J19HK0 J19F74, J19HW2	No MS or duplicate analysis
Nitrate/nitrite	J	All	RPD

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Case Narrative

Client: WC-HANFORD RC/114 K1926
LVL#: 1002009

W.O.#: 60049-001-001
Date Received: 02-03-10

INORGANIC NARRATIVE

1. This narrative covers the analyses of 8 water samples.

2. The samples were prepared and analyzed in accordance with the methods indicated on the data summary report.

   Lionville Lab (LvL) is NELAP accredited by the State of Pennsylvania. For a complete list of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager. LvL certifies that all test results meet the requirements of NELAC with any exception noted in the following statements.

3. Sample holding times as required by the method and/or contract were met with the exception of Nitrate, Nitrite and Orthophosphate.

4. The results presented in this report are derived from samples that met LvL's sample acceptance policy with the exception of Nitrate, Nitrite, Orhophosphate, Total Organic Carbon (TOC) and Total Inorganic Carbon (TIC) as noted on the Sample Receipt Checklist.

5. The method blanks were within the method criteria.

6. The Laboratory Control Samples (LCS) were within the laboratory control limits.

7. The matrix spike recoveries for Nitrate Nitrite was out at 73%; recoveries for TOC, Fluoride, Chloride, Nitrite, Nitrate, Orthophosphate and Sulfate were within the 75-125% control limits.

8. The replicate analyses were for Nitrate Nitrite was out at 22%. TOC, Fluoride, Chloride, Nitrite, Nitrate, Orthophosphate and Sulfate within the 20% Relative Percent Difference (RPD) control limit.

9. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard copy package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

SAMPLE RECEIPT CHECKLIST (SRC)

Client/PM: WC Hanford
Project/SAF/SOW/Release #: [illegible]
Date: [illegible]

LvLI Batch #: [illegible]
Sample Custodian: [illegible]

NOTE: EXPLAIN ALL DISCREPANCIES

1. Samples Hand Delivered or [✓ Shipped]? Carrier: FedEx Airbill #: [illegible]

2. Custody Seals on coolers or shipping containers intact, signed & dated? ☑ Yes ☐ No ☐ No Seals

3. Outside of coolers or shipping containers are free from damage? ☐ Yes ☑ No Comments: * hole - bottom of cooler

4. All expected paperwork received (coc & other client specific information) sealed in plastic bag and easily accessible? ☑ Yes ☐ No

5. Samples received [✓ cooled] or ambient? Temp [illegible] °C Cooler # [illegible]

How was the temperature taken? ☑ IR ☐ Temp. Blank ☐ Other (Specify): [illegible]

Is the Temp Criteria met for these samples? (Hg in soils @ 4°C) ☑ Yes ☐ No

6. Custody seals on sample containers intact, signed and dated? ☑ Yes ☐ No ☐ No Seals

7. COC (Client & LvLI) signed & dated? ☑ Yes ☐ No

8. Sample containers are intact? ☑ Yes ☐ No

9. All samples on COC received? ☑ Yes ☐ No
All samples received on COC? ☑ Yes ☐ No

10. All sample label information matches COC? ☑ Yes ☐ No

11. Samples properly preserved? (If #5 is no, then this is no.) ☑ Yes ☐ No

12. Samples received within hold times? ☐ Yes ☑ No *
Short holds taken to wet lab? ☑ Yes ☐ No ☐ N/A

* J1M0D8, J1M0D7, J1M0[illegible] J1M0C7, J1M0H4 [illegible] NO2, NO3, PO4 past HT

13. VOA, TOC, TOX free of headspace? ☑ Yes ☐ No [illegible] ☐ N/A

14. QC stickers placed on bottles designated by client? ☐ Yes ☐ No ☑ N/A

15. Shipment meets LvLI Sample Acceptance Policy? (Identify all bottles that do not meet the policy, which is on the reverse of this page.) ☐ Yes ☐ No

16. Project Manager contacted concerning any discrepancies? ☐ Yes ☐ No ☐ N/A
Person Contacted ______ Date ______

Date: 12 April 2010
To: Washington Closure Hanford (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA -- Pore Water – Phase III
Subject: Volatiles - Data Package No. K1926-LLI

INTRODUCTION

This memo presents the results of data validation on Summary Data Package No. K1926 prepared by Lionville Laboratory Inc. (LLI). A list of the samples validated along with the analyses reported and the method of analysis is provided in the following table

Sample ID	Sample Date	Media	Validation	Data
J19F74	2/1/10	Water	C	See note 1
J19HW2	2/1/10	Water	C	See note 1
J19JC1	2/1/10	Water	C	See note 1

1 - Volatiles by 8260B

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below.

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5 Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY OBJECTIVES

- **Holding Times & Sample Preservation**

Analytical holding times are assessed to ascertain whether the holding time requirements were met by the laboratory. Preserved water samples must be analyzed within: 14 days of the date of sample collection for preserved samples and 7 days for unpreserved samples.

If holding times are exceeded, but not by greater than twice the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than twice the limit, all associated detected sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR"

All holding times were acceptable

- **Blanks**

Method blank analyses are conducted to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. Analytical results for analytes present in any sample at less than five times the concentration of that analyte found in the associated blank are qualified as non-detects and flagged "U". Common laboratory contaminants present in samples at less than ten times the concentration of that analyte found in the associated blank are qualified as non-detects. If a sample result is less than the CRQL and is less than five times (or less than ten times for lab contaminants) the highest associated blank result, the sample result value is raised to the CRQL level and qualified as undetected "U".

All method blank results were acceptable.

Field Blanks

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike/Matrix Spike Duplicate & Laboratory Control Sample

Matrix spike/matrix spike duplicate analyses are used to assess the analytical accuracy of the reported data and the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike/matrix spike duplicate analyses are performed in duplicate using five compounds for which percent recoveries must be within a range of 50-150% or within laboratory control limits. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Undetected sample results with spike recoveries below control limits are qualified as estimates and flagged "UJ". Undetected sample results are not qualified if the spike recovery is above control limits. Sample results greater than five times the spike concentration require no qualification.

All accuracy results were acceptable.

Surrogate Recovery

The analyses of surrogate compounds provide a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the EPA CLP program. If two surrogates of the same class of compounds (base/neutral or acid) are out of control limits, all associated sample results greater than the contract required quantitation limit (CRQL) are qualified as estimates and flagged "J". Sample results less than the CRQL and below the lower control limit are qualified as estimates and flagged "UJ". Sample results less than the CRQL with recoveries above the upper control limit require no qualification. If a surrogate recovery is less than 10%, detects are qualified as estimates and flagged "J" and nondetects are rejected and flagged "UR".

All surrogate recovery results were acceptable.

- **Precision**

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike (MS)/matrix spike duplicate (MSD) results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed by the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. Samples results must be within RPD limits of +/-20%. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

All precision results were acceptable.

Field Duplicate Samples

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the minimum detection limits (MDLs) to ensure that laboratory detection levels meet the required criteria. Three analytes exceeded the RQL. Under the WCH statement of work, no qualification is required. All other results met the RQL.

- **Completeness**

Data package No. K1926 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

Three analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validator in compliance with the WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e , usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Case Narrative

Client: WC-HANFORD RC-114
LVL #: 1002009
SDG/SAF #: K1936 / RC-114

W.O. #: 60049-001-001-0001-00
Date Received: 02-03-2010

GC/MS VOLATILE

Three (3) water samples were collected on 02-01-2010.

The samples and associated QC samples were analyzed according to criteria set forth in Lionville Laboratory SOPs based on SW Method 8260B for TCL Volatile target compounds on 02-12,13-2010.

The following is a summary of QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. Samples were analyzed within hold time.
2. Non-target compounds were detected in these samples.
3. All surrogate recoveries were within acceptance criteria.
4. All matrix spike recoveries were within acceptance criteria.
5. All blank spike recoveries were within acceptance criteria.
6. The method blanks were below the reporting limit for all target compounds.
7. Internal standard area and retention time criteria were met.
8. Manual integrations are performed according to SOP QA-125 to produce quality data with utmost integrity. All manual integrations are required to be technically valid and properly documented. Appropriate technical flags are defined in the Glossary ("Technical Flags For Manual Integration").
9. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

10. "I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

Project: Columbia River Component of the RCBRA – Pore Water – Phase III
Subject: Inorganic - Data Package No. K1926-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1926 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Data
J19JD8	1/29/10	Water	C	See note 1
J19JF2	1/29/10	Water	C	See note 1
J19JD7	1/29/10	Water	C	See note 1
J19JF1	1/29/10	Water	C	See note 1
J19JD9	1/30/10	Water	C	See note 1
J19JF3	1/30/10	Water	C	See note 1
J19JC7	1/31/10	Water	C	See note 1
J19JC8	1/31/10	Water	C	See note 1
J19HN9	1/31/10	Water	C	See note 1
J19HP0	1/31/10	Water	C	See note 1
J19HK0	1/31/10	Water	C	See note 1
J19HK1	1/31/10	Water	C	See note 1
J19F74	2/1/10	Water	C	See note 1
J19F78	2/1/10	Water	C	See note 1
J19HW2	2/1/10	Water	C	See note 1
J19HW4	2/1/10	Water	C	See note 1
J19JC3	2/1/10	Water	C	See note 1

1 - ICP metals (6010B) and mercury (7471A)

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

· Holding Times

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows; Samples must be analyzed within 6 months for ICP metals and 28 days for mercury.

All holding times were acceptable.

· Preparation (Method) Blanks

Preparation Blanks

At least one preparation blank, consisting of deionized distilled water processed through each sample preparation and analysis procedure, must be prepared and analyzed with every sample delivery group. In the case of positive blank results, samples with digestate concentrations less than five times the preparation blank value have had their associated values qualified as non-detected and flagged "U". Samples with concentrations of greater than five times the highest blank concentration do not require qualification

In the case of negative blank results, if the absolute value exceeds the contract required detection limit (CRDL), all nondetects are rejected and flagged "UR" and all detects that are less than ten times the absolute value of the associated preparation blank result are qualified as estimates and flagged "J" If the absolute value of the negative preparation blank is greater than the instrument detection limit (IDL) and less than or equal to the CRDL, all nondetects are qualified as estimates and flagged "UJ" and all detects less than ten times the absolute value of the blank are qualified as estimates and flagged "J" If the sample results are greater than ten times the absolute value of the preparation blank, no qualification is necessary.

Due to method blank contamination, the aluminum result in samples J19JF2, J19JD7, J19JF1, J19JF3, J19JC8, J19HP0, J19HK1, J19F78, J19HW4 and J19JC3 were qualified as undetected and flagged "UJ".

All other preparation blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

All accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicate

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the 100 and 300 Area RQLs to ensure that laboratory detection levels meet the required criteria. All results met the RQL.

Completeness

Data package No. K1926 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to method blank contamination, the aluminum result in samples J19JF2, J19JD7, J19JF1, J19JF3, J19JC8, J19HP0, J19HK1, J19F78, J19HW4 and J19JC3 were qualified as undetected and flagged "UJ".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

METALS DATA QUALIFICATION SUMMARY*

SDG: K1926	**REVIEWER: ELR**	**Project: RCBRA**	**PAGE_1_OF_1**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Aluminum	UJ	J19JF2, J19JD7 J19JF1, J19JF3 J19JC8, J19HP0 J19HK1, J19F78 J19HW4, J19JC3	Method blank contamination

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table

Date Received: 02-03-10

METALS

The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below.

1. This narrative covers the analyses of 17 water samples.
2. The samples were prepared and analyzed in accordance with methods listed on the data report forms.
3. All analyses were performed within the required holding times.
4. Please refer to the Sample Receipt Check List for any sample discrepancies in LvLI's sample acceptance policy.
5. All Initial and Continuing Calibration Verifications (ICV/CCVs) were within the 90-110% control limits (80-120% for Mercury).
6. All Initial and Continuing Calibration Blanks (ICB/CCBs) were within control limits (less than the LOQ).
7. All preparation/method blanks (MB) were within method criteria (less than the Limit of Quantitation (3-10X the LOD), or samples greater than 20X MB value).
8. All ICP Interference Check Standards were within control limits.
9. All laboratory control samples (LCS) were within the 80-120% control limits.
10. All matrix spike (MS) recoveries were within the 75-125% control limits.
11. All duplicate analyses were within the 20% Relative Percent Difference (RPD) control limit critieria. The ± 20% RPD control limit applies to sample results greater than ten times the MDL.

12. For the purposes of this report, the data have been reported to the Limit of Detection (LOD). Values between the LOD and the Limit of Quantitation (LOQ) are acquired in a region of less-certain quantification.

13. Soluble and total digestates were prepared within the same preparation batch.

14. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

15. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

Iain Daniels
Laboratory Manager
Lionville Laboratory

F.2.2 Surface Water

F.2.2.1 SDG J00712

SAF-RC-115
Columbia River Component of the RCBRA – Surface Water
FINAL VALIDATION PACKAGE

COMPLETE COPY OF VALIDATION PACKAGE TO:

Kathy Wendt H4-21

COMMENTS:

SDG J00712 **SAF-RC-115**

Date: 25 March 2010
To: Washington Closure Hanford Inc (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA – Surface Water
Subject: Wet Chemistry - Data Package No. J00712-TAL

INTRODUCTION

This memo presents the results of data validation on Data Package No. J00712 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J19J85	2/5/10	Water	C	See note 1
J19J86	2/5/10	Water	C	See note 1

1 – Chromium VI by 7196A

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

Holding Times

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 24 hours for chromium VI.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR"

All holding times were acceptable.

Method Blanks

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

Accuracy

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 80% to 120%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 79% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 120% or less than 80% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 120% and a sample result less than the IDL, no qualification is required.

All accuracy results were acceptable.

Precision

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 20%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All duplicate results were acceptable.

Field Duplicate

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package J00712 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

None found.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Number of Samples : Two (2)
Sample Type : Water
SDG Number : H0712
Data Deliverable : 15 Day / Summary

CASE NARRATIVE

I. Introduction

On February 6, 2010 two water samples were received at TestAmerica for chemistry analysis. Upon receipt, the samples were assigned the following laboratory ID numbers to correspond with the Washington Closure Hanford (WCH) specific ID:

WCH ID#	TARL ID#	MATRIX	DATE OF RECEIPT
J19J85	LVBJM	WATER	02/06/10
J19J86	LVBJJ	WATER	02/06/10

II. Sample Receipt

The samples were received in good condition and no anomalies were noted during check-in.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

Washington Closure Hanford
February 22, 2010

The requested analyses were:

Chemical Analysis
Hexavalent Chromium by EPA method 7196A

IV. Quality Control

The analytical results for each analysis performed includes a minimum of one laboratory control sample (LCS), one method (reagent) blank, and one duplicate sample analysis. Any exceptions have been noted in the "Comments" section.

QC and sample results are reported in the same units.

V. Comments

Chemical Analysis
Hexavalent Chromium by EPA method 7196A:
Samples J19J85 and J19J86 were filtered prior to aliquoting. Except as noted, the LCS, batch blank, samples, sample duplicate (J19J85), sample matrix spike (J19J85), and matrix spike duplicate (J19J85) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

Columbia River Component of the RCBRA – Surface Water
FINAL VALIDATION PACKAGE

COMPLETE COPY OF VALIDATION PACKAGE TO:

Kathy Wendt   H4-21

COMMENTS:

SDG K1917   **SAF-RC-115**

Date: 29 March 2010
To: Washington Closure Hanford (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA – Surface Water
Subject: Wet Chemistry - Data Package No. K1917-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1917 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Data
J19F85	1/25/10	Water	C	See note 1
J19FC8	1/25/10	Water	C	See note 1
J19FH2	1/24/10	Water	C	See note 1
J19FH3	1/24/10	Water	C	See note 1
J19H19	1/25/10	Water	C	See note 1
J19HR4	1/22/10	Water	C	See note 1
J19HR6	1/23/10	Water	C	See note 1

1 – Alkalinity by 310.1, hardness by 130.2 and dissolved organic carbon by 415.1.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times & Sample Preservation**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Samples must be analyzed within 6 months for hardness, 28 days for dissolved organic carbon and 14 days for alkalinity.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non detects are rejected and flagged "UR".

Due to the samples not being properly preserved (no acid added), all dissolved organic carbon results were qualified as estimates and flagged "J".

All other holding time and sample preservation results were acceptable.

- **Method Blanks**

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

Due to the lack of a matrix spike analysis, all alkalinity results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 20%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicate

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package No. K1917 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiency was noted:

- Due to the samples not being properly preserved (no acid added), all dissolved organic carbon results were qualified as estimates and flagged "J".
- Due to the lack of a matrix spike analysis, all alkalinity results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

WET CHEMISTRY DATA QUALIFICATION SUMMARY*

SDG: K1917	**REVIEWER: ELR**	**Project: RCBRA**	**PAGE 1 OF 1**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Dissolved organic carbon	J	All	Sample preservation (no acid added)
Alkalinity	J	All	No MS analysis

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Case Narrative

Client: WC-HANFORD RC-115 K1917
LVL#: 1001099

W.O.#: 60049-001-001
Date Received: 01-27-10

INORGANIC NARRATIVE

1. This narrative covers the analyses of 7 water samples.

2. The samples were prepared and analyzed in accordance with the methods indicated on the data summary report. The Dissolved Organic Carbon (DOC) samples submitted were filtered and acidified in the laboratory.

   Lionville Lab (LvL) is NELAP accredited by the State of Pennsylvania. For a complete list of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager. LvL certifies that all test results meet the requirements of NELAC with any exception noted in the following statements.

3. Sample holding times as required by the method and/or contract were met..

4. The results presented in this report are derived from samples that met LvL's sample acceptance policy with the exception of DOC as noted on the Sample Receipt Checklist.

5. The method blanks were within the method criteria; sample L002247-BLK2 represents the filter blank for DOC samples filtered in the laboratory.

6. The Laboratory Control Samples (LCS) were within the laboratory control limits. The duplicate LCS for Total Alkalinity was within the 20% Relative Percent Difference (RPD) control limit.

7. The matrix spike recoveries were within the 75-125% control limits.

8. The replicate analyses were within the 20% Relative Percent Difference (RPD) control limit.

9. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard copy package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

Jon Daniels

CLIENT: WC Hanford
Project/SDG/Reference #: PL-115
Date: 1-21-10
LVLI Batch #: 1001C59
Sample Custodian:

NOTE: EXPLAIN ALL DISCREPANCIES

1. Samples Hand Delivered or Shipped?	Courier FedEx		Airbill # 1532 1448 4464 1532 1446 45
2. Custody Seals on coolers or shipping containers intact, signed & dated?	☑ Yes	☐ No	☐ No Seals
3. Outside of coolers or shipping containers are free from damage?	☑ Yes	☐ No	Comments:
4. All expected paperwork received (coc & other client specific information) sealed in plastic bag and easily accessible?	☑ Yes	☐ No	
5. Samples received cooled condition?	Temp 3.4 (3.8)	°C	Cooler # AFS-08-001
How was the temperature taken?	☑ IR	☐ Temp. Blank	☐ Other (Specify) AFS-04-05
Is the Temp. Criteria met for these samples? Hg in soils (@ 4°C)	☑ Yes	☐ No	
6. Custody seals on sample containers intact, signed and dated?	☑ Yes	☐ No	☐ No Seals
7. COC (Client & LVLI) signed & dated?	☑ Yes	☐ No	
8. Sample containers are intact?	☑ Yes	☐ No	
9. All samples on COC received? All samples received on COC?	☑ Yes ☑ Yes	☐ No ☐ No	
10. All sample label information matches COC?	☑ Yes	☐ No	
11. Samples properly preserved? (If pH is no, then this is no.)	☐ Yes	☑ No See COC See explanation	
12. Samples received within hold times? Short holds taken to wet lab?	☑ Yes ☐ Yes	☐ No ☐ No	☑ N/A
13. VOA, TOC, TOX free of headspace?	☑ Yes	☐ No	☐ N/A
14. QC volumes placed on bottles and sealed by client?	☐ Yes	☐ No	☑ N/A
15. Shipment meets LVLI Sample Acceptance Policy? (Identify all bottles that do not meet the policy, which is on the reverse of this page.)	☐ Yes	☑ No	
16. Project Manager contacted concerning any discrepancies?	☑ Yes	☐ No	☐ N/A

From: ELR Consulting
Project: Columbia River Component of the RCBRA – Surface Water
Subject: Volatiles - Data Package No. K1917-LLI

INTRODUCTION

This memo presents the results of data validation on Summary Data Package No. K1917 prepared by Lionville Laboratory Inc. (LLI). A list of the samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Date
J19H19	1/25/10	Water	C	See note 1
J19FF3	1/25/10	Water	C	See note 1
J19FC8	1/25/10	Water	C	See note 1
J19HH2	1/25/10	Water	C	See note 1
J19FW5	1/25/10	Water	C	See note 1
J19F85	1/25/10	Water	C	See note 1

1 - Volatiles by 8260B

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY OBJECTIVES

- **Holding Times & Sample Preservation**

Analytical holding times are assessed to ascertain whether the holding time requirements were met by the laboratory. Preserved water samples must be analyzed within: 14 days of the date of sample collection for preserved samples and 7 days for unpreserved samples.

If holding times are exceeded, but not by greater than twice the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than twice the limit, all associated detected sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Blanks**

Method blank analyses are conducted to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. Analytical results for analytes present in any sample at less than five times the concentration of that analyte found in the associated blank are qualified as non-detects and flagged "U". Common laboratory contaminants present in samples at less than ten times the concentration of that analyte found in the associated blank are qualified as non-detects. If a sample result is less than the CRQL and is less than five times (or less than ten times for lab contaminants) the highest associated blank result, the sample result value is raised to the CRQL level and qualified as undetected "U".

All method blank results were acceptable.

Field Blanks

One equipment blank (J19HH2) and one trip blank (J19FF3) were submitted for analysis. All field blank results were acceptable.

- **Accuracy**

Matrix Spike/Matrix Spike Duplicate & Laboratory Control Sample

Matrix spike/matrix spike duplicate analyses are used to assess the analytical accuracy of the reported data and the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike/matrix spike duplicate analyses are performed in duplicate using five compounds for which percent recoveries must be within a range of 50-150% or within laboratory control limits. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Undetected sample results with spike recoveries below control limits are qualified as estimates and flagged "UJ". Undetected sample results are not qualified if the spike recovery is above control limits. Sample results greater than five times the spike concentration require no qualification.

Due to the lack of a matrix spike and matrix spike duplicate analysis, all VOA results in samples J19FC8, J19HH2, J19FW5 and J19F85 were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Surrogate Recovery

The analyses of surrogate compounds provide a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the EPA CLP program. If two surrogates of the same class of compounds (base/neutral or acid) are out of control limits, all associated sample results greater than the contract required quantitation limit (CRQL) are qualified as estimates and flagged "J". Sample results less than the CRQL and below the lower control limit are qualified as estimates and flagged "UJ". Sample results less than the CRQL with recoveries above the upper control limit require no qualification. If a surrogate recovery is less than 10%, detects are qualified as estimates and flagged "J" and nondetects are rejected and flagged "UR".

All surrogate recovery results were acceptable.

- **Precision**

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike (MS)/matrix spike duplicate (MSD) results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed by the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. Samples results must be within RPD limits of +/-20%. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

Due to the lack of a matrix spike and matrix spike duplicate analysis, all VOA results in samples J19FC8, J19HH2, J19FW5 and J19F85 were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

No field duplicates were submitted for analysis.

Analytical Detection Levels

Reported analytical detection levels are compared against the minimum detection limits (MDLs) to ensure that laboratory detection levels meet the required criteria. Six analytes exceeded the RQL. Under the WCH statement of work, no qualification is required. All other results met the RQL.

Completeness

Data package No. K1917 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiency was noted:

- Due to the lack of a matrix spike and matrix spike duplicate analysis, all VOA results in samples J19FC8, J19HH2, J19FW5 and J19F85 were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validator in compliance with the WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

VOLATILE ORGANIC DATA QUALIFICATION SUMMARY*

SDG: K1917	**REVIEWER: ELR**	**Project: RCBRA**	**PAGE 1 OF 1**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
All	J	J19FC8, J19HH2 J19FW5, J19F85	No MS or MSD analysis

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Appendix 4

Laboratory Narrative and Chain-of-Custody Documentation

Case Narrative

Client: WC HANFORD RC-115
LVL #: 1001099
SDG/SAF # K1917 / RC-115

W.O. #: 60049-001-001-0001-00
Date Received: 01-27-2010

GC/MS VOLATILE

Six (6) water samples were collected on 01-25-2010.

The samples and associated QC samples were analyzed according to criteria set forth in Lionville Laboratory SOPs based on SW Method 8260B for Client Specified Volatile target compounds on 01-31-2010 and 02-07-2010.

The following is a summary of QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. Discrepancies from the sample acceptance policy have been recorded on the Sample Receipt Checklist.
2. Samples were analyzed within hold time.
3. Non-target compounds were detected in these samples.
4. All surrogate recoveries were within acceptance criteria.
5. All matrix spike recoveries were within acceptance criteria.
6. All blank spike recoveries were within acceptance criteria.
7. The method blanks were below the reporting limit for all target compounds.
8. Internal standard areas were outside QC limits for samples: J19FC8, J191H2, J19FW5, and J19F85. The samples were not reanalyzed due to hold time.
9. Manual integrations are performed according to SOP QA-125 to produce quality data with utmost integrity. All manual integrations are required to be technically valid and properly documented. Appropriate technical flags are defined in the Glossary ("Technical Flags For Manual Integration").
10. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

11. "I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

Iain Daniels

Water

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Technical verification documentation present? .... Yes [✓ No] N/A

Comments:

2. INSTRUMENT TUNING AND CALIBRATION (Levels D and E)

GC/MS tuning/performance check acceptable? .... Yes No [✓ N/A]

Initial calibrations acceptable? .... Yes No [✓ N/A]

Continuing calibrations acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

Calculation check acceptable? .... Yes No [✓ N/A]

Comments:

GC/MS ORGANIC DATA VALIDATION CHECKLIST

3. BLANKS (Levels B, C, D, and E)

Calibration blanks analyzed? (Levels D, E) .... Yes No [✓ N/A]
Calibration blank results acceptable? (Levels D, E) .... Yes No [✓ N/A]
Laboratory blanks analyzed? .... [✓ Yes] No N/A
Laboratory blank results acceptable? .... [✓ Yes] No N/A
Field/trip blanks analyzed? (Levels C, D, E) .... [✓ Yes] No N/A
Field/trip blank results acceptable? (Levels C, D, E) .... [✓ Yes] No N/A
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]
Comments:

FP3 HH2

4. ACCURACY (Levels C, D, and E)

Surrogates/system monitoring compounds analyzed? .... [✓ Yes] No N/A
Surrogate/system monitoring compound recoveries acceptable? .... [✓ Yes] No N/A
Surrogates traceable? (Levels D, E) .... Yes No [✓ N/A]
Surrogates expired? (Levels D, E) .... Yes No [✓ N/A]
MS/MSD samples analyzed? .... [✓ Yes] No N/A
MS/MSD results acceptable? .... [✓ Yes] No N/A
MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]
MS/MSD standards? (Levels D, E) .... Yes No [✓ N/A]
LCS/BSS samples analyzed? .... [✓ Yes] No N/A
LCS/BSS results acceptable? .... [✓ Yes] No N/A
Standards traceable? (Levels D, E) .... Yes No [✓ N/A]
Standards expired? (Levels D, E) .... Yes No [✓ N/A]
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]
Performance audit sample(s) analyzed? .... Yes [✓ No] N/A
Performance audit sample results acceptable? .... Yes No [✓ N/A]
Comments: NO PAS

NO MS/MSD - C4, H2, W5, 95 - J.

GC/MS ORGANIC DATA VALIDATION CHECKLIST

5. PRECISION (Levels C, D, and E)

MS/MSD samples analyzed? .... [✓ Yes] No N/A
MS/MSD RPD values acceptable? .... [✓ Yes] No N/A
MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]
MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]
Field duplicate RPD values acceptable? .... Yes No [✓ N/A]
Field split RPD values acceptable? .... Yes No [✓ N/A]
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments:
no MS/MSD - C8, H2, W5, 85 - J.

6. SYSTEM PERFORMANCE (Levels D and E)

Internal standards analyzed? .... Yes No [✓ N/A]
Internal standard areas acceptable? .... Yes No [✓ N/A]
Internal standard retention times acceptable? .... Yes No [✓ N/A]
Standards traceable? .... Yes No [✓ N/A]
Standards expired? .... Yes No [✓ N/A]
Transcription/calculation errors? .... Yes No [✓ N/A]

Comments:

7. HOLDING TIMES (all levels)

Samples properly preserved? .... [✓ Yes] No N/A
Sample holding times acceptable? .... [✓ Yes] No N/A

Comments:

GC/MS ORGANIC DATA VALIDATION CHECKLIST

8. COMPOUND IDENTIFICATION, QUANTITATION, AND DETECTION LIMITS (all levels)

Compound identification acceptable? (Levels D, E) .... Yes No [✓ N/A]

Compound quantitation acceptable? (Levels D, E) .... Yes No [✓ N/A]

Results reported for all requested analyses? .... [✓ Yes] No N/A

Results supported in the raw data? (Levels D, E) .... Yes No N/A

Samples properly prepared? (Levels D, E) .... Yes No [✓ N/A]

Laboratory properly identified and coded all TIC? (Levels D, E) .... Yes No [✓ N/A]

Detection limits meet RDL? .... Yes [✓ No] N/A

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: ______________________________

Cont ______________________________

9. SAMPLE CLEANUP (Levels D and E)

GPC cleanup performed? .... Yes No [✓ N/A]

GPC check performed? .... Yes No [✓ N/A]

GPC check recoveries acceptable? .... Yes No [✓ N/A]

GPC calibration performed? .... Yes No [✓ N/A]

GPC calibration check performed? .... Yes No [✓ N/A]

GPC calibration check retention times acceptable? .... Yes No [✓ N/A]

Check/calibration materials traceable? .... Yes No [✓ N/A]

Check/calibration materials Expired? .... Yes No [✓ N/A]

Analytical batch QC given similar cleanup? .... Yes No [✓ N/A]

Transcription/Calculation Errors? .... Yes No [✓ N/A]

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1917 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Date
J19HR4	1/22/10	Water	C	See note 1
J19HR8	1/22/10	Water	C	See note 1
J19HR6	1/23/10	Water	C	See note 1

J19FC8	1/25/10	Water	C	See note 1
J19FC9	1/25/10	Water	C	See note 1
J19F85	1/25/10	Water	C	See note 1
J19F89	1/25/10	Water	C	See note 1

1 - ICP metals (6010B) and mercury (7471A).

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Samples must be analyzed within 6 months for ICP metals and

28 days for mercury.

All holding times were acceptable.

Preparation (Method) Blanks

Preparation Blanks

At least one preparation blank, consisting of deionized distilled water processed through each sample preparation and analysis procedure, must be prepared and analyzed with every sample delivery group. In the case of positive blank results, samples with digestate concentrations less than five times the preparation blank value have had their associated values qualified as non-detected and flagged "U" Samples with concentrations of greater than five times the highest blank concentration do not require qualification.

In the case of negative blank results, if the absolute value exceeds the contract required detection limit (CRDL), all nondetects are rejected and flagged "UR" and all detects that are less than ten times the absolute value of the associated preparation blank result are qualified as estimates and flagged "J". If the absolute value of the negative preparation blank is greater than the instrument detection limit (IDL) and less than or equal to the CRDL, all nondetects are qualified as estimates and flagged "UJ" and all detects less than ten times the absolute value of the blank are qualified as estimates and flagged "J". If the sample results are greater than ten times the absolute value of the preparation blank, no qualification is necessary.

Due to method blank contamination, the iron results in samples J19HR4, J19HR8, J19HR6, J19FH3, J19FC8 and J19F85, were qualified as undetected and flagged "UJ".

Due to method blank contamination, all aluminum and manganese results were qualified as undetected and flagged "UJ".

All other preparation blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

Accuracy

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

All accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects

All laboratory duplicate results were acceptable.

Field Duplicate

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the 100 and 300 Area RQLs to ensure that laboratory detection levels meet the required criteria. All results met the RQL.

- **Completeness**

Data package No. K1917 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to method blank contamination, the iron results in samples J19HR4, J19HR8, J19HR6, J19FH3, J19FC8 and J19F85 were qualified as undetected and flagged "UJ".
- Due to method blank contamination, all aluminum and manganese results were qualified as undetected and flagged "UJ".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

METALS DATA QUALIFICATION SUMMARY*

SDG: K1917	**REVIEWER: ELR**	**Project: RCBRA**	**PAGE_1_OF_1**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Iron	UJ	J19HR4, J19HR8, J19HR6, J19FH3, J19FC8, J19F85	Method blank contamination
Manganese Aluminum	UJ	All	Method blank contamination

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Case Narrative

Client: WC-HANFORD RC-115
LVL#: 1001099
SDG/SAF#: K1917/RC-115

W.O.#: 60049-001-001-0001-00
Date Received: 01-27-10

METALS

The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below.

1. This narrative covers the analyses of 14 water samples.
2. The samples were prepared and analyzed in accordance with methods listed on the data report forms.
3. All analyses were performed within the required holding times.
4. Please refer to the Sample Receipt Check List for any sample discrepancies in LvLI's sample acceptance policy.
5. All Initial and Continuing Calibration Verifications (ICV/CCVs) were within the 90-110% control limits (80-120% for Mercury).
6. All Initial and Continuing Calibration Blanks (ICB/CCBs) were within control limits (less than the LOQ).
7. All preparation/method blanks (MB) were within method criteria (less than the Limit of Quantitation (3-10X the LOD), or samples greater than 20X MB value).
8. All ICP Interference Check Standards were within control limits.
9. All laboratory control samples (LCS) were within the 80-120% control limits.
10. All matrix spike (MS) recoveries were within the 75-125% control limits.
11. All duplicate analyses were within the 20% Relative Percent Difference (RPD) control limit critieria. The ± 20% RPD control limit applies to sample results greater than ten times the MDL. The sample results for Aluminum and Manganese were less than ten times the MDL.

[illegible]

12. For the purposes of this report, the data have been reported to the Limit of Detection (LOD). Values between the LOD and the Limit of Quantitation (LOQ) are acquired in a region of less-certain quantification.

13. Soluble and total digestates were prepared within the same preparation batch.

14. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

15. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

Iain Daniels

From: ELR Consulting
Project: Columbia River Component of the RCBRA - Surface Water
Subject: Radiochemistry - Data Package No. K1917-EB

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1917 prepared by Eberline Services (EB). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Data
J19F85	1/25/10	Water	C	See note 1
J19FC8	1/25/10	Water	C	See note 1
J19FH2	1/24/10	Water	C	See note 1 & 2
J19FH3	1/24/10	Water	C	See note 1 & 2
J19H19	1/25/10	Water	C	See note 1
J19HR4	1/22/10	Water	C	See note 1 & 3
J19HR6	1/23/10	Water	C	See note 1 & 3

1 – Alpha spectroscopy & gamma spectroscopy
2 - Total strontium
3 - Carbon-14, total strontium

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Holding times are calculated from Chain-of-Custody forms to determine the validity of the results. The maximum holding time for radiochemical analysis is 6 months

All holding times were acceptable.

- **Preparation (Method) Blanks**

Laboratory Blanks

Blank samples are analyzed to determine if positive results are due to laboratory reagent, sample container, or detector contamination. If blank analysis results indicate the presence of an analyte above the minimum detectable activity (MDA), the following qualifiers are applied: All positive sample results less than five times the highest blank concentration are qualified as estimates and flagged "J"; sample results below the MDA are qualified as undetected and flagged "U"; sample results above the MDA and greater than five times the highest blank concentration are not qualified.

All blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Accuracy is evaluated from laboratory control sample (LCS) or blank spike sample (BSS) batch samples and spiked samples from the analytical batch. Measured activities are compared to the known added amounts. The acceptable LCS or BSS and matrix spike (MS) recovery range is 70-130%. In addition, samples may be spiked with a radiochemical tracer to assist in isolating the radioisotope of interest with the yield of the tracer being used in calculating sample activity. The acceptable range for tracer recovery is 20% to 105%. Spike sample results outside the above ranges result in associated sample results being qualified as estimates, or not qualified, depending on the activity of the individual sample. Results are rejected for LCS/BSS recoveries of less than 30% and tracer recoveries of less than 20%, and tracer recoveries of greater than 115% for detected results.

Due to the lack of an LCS analysis, all thorium-228 (aspec) and thorium-232 (aspec) results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

- **Laboratory Duplicates**

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the contract required detection limit (CRDL) and the RPD is less than 20%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All duplicate results were acceptable.

Field Duplicates

No field duplicates were submitted for analysis.

- **Detection Levels**

Reported analytical detection levels for undetected analytes are compared against the project RQLs to ensure that laboratory detection levels meet the required criteria. Ten analytes exceeded the RQL. Under the WCH statement of work, no qualification is required. All other analytes met the RQL.

- **Completeness**

Data package No. K1917 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to the lack of an LCS analysis, all thorium-228 (aspec) and thorium-232 (aspec) results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods

Ten analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH statement of work are as follows:

U - Indicates the compound or analyte was analyzed for and not detected above the minimum detectable activity (MDA) in the sample. The value reported is the sample result corrected for sample dilution and moisture content by the laboratory. The data is usable for decision making purposes.

UJ - Indicates the compound or analyte was analyzed for and not detected at concentrations above the minimum detectable activity (MDA) in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate, but is usable for decision making purposes.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

Appendix 2

Summary of Data Qualification

RADIOCHEMISTRY DATA QUALIFICATION SUMMARY*

SDG: K1917	**REVIEWER: ELR**	**Project: RCBRA**	**PAGE 1 OF 1**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Thorium-228 (aspec) Thorium-232 (aspec)	J	All	No MS analysis

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Appendix 4

Laboratory Narrative and Chain-of-Custody Documentation

1.0 GENERAL

Washington Closure Hanford (WCH) Sample Delivery Group K1917 was composed of seven water samples designated under SAF No. RC-115 with a Project Designation of: Columbia River Component of the RCBRA - Surface Water.

The samples were received as stated on the Chain-of-Custody documents. Any discrepancies are noted on the Eberline Analytical Sample Receipt Checklist. The results were sent to WCH via e-mail February 12, 2010.

2.0 ANALYSIS NOTES

2.1 Carbon-14 Analysis

No problems were encountered during the course of the analyses.

2.2 Strontium-90 Analysis

No problems were encountered during the course of the analyses.

2.3 Isotopic Thorium Analysis

No problems were encountered during the course of the analyses.

2.4 Isotopic Uranium Analysis

No problems were encountered during the course of the reanalyses.

2.5 Isotopic Plutonium Analysis

No problems were encountered during the course of the analyses.

2.6 Gamma Spectroscopy

No problems were encountered during the course of the analyses.

3.0 Case Narrative Certification Statement

"I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data obtained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

N. Joseph Verville

CHAIN OF CUSTODY/SAMPLE ANALYSIS REQUEST

RC-115-229

Page 1 of 1

Collector: R. Curet

Company Contact: Joan Kessner

Telephone No.: 375-4668

Project Coordinator: KESSNER, JH

Price Code: 7C

Data Turnaround: 15 Days

Project Designation: Columbia River Component of the RCBRA - Surface Water

Sampling Location: 300A-- T3008 K1417 (7735)

SAF No.: RC-115

Ice Chest No.: ERC-96-069

Field Logbook No.: EL-1645 - 01

COA: BESCRC6520

Method of Shipment: FED EX

Shipped To: [✓ EBERLINE SERVICES] LIONVILLE

Offsite Property No.: N/A

Bill of Lading/Air Bill No.: 7983 4000 5815

POSSIBLE SAMPLE HAZARDS/REMARKS

F.2.3.1 SDG J00733

SAF-RC-116
Columbia River Component of the RCBRA – Sediment
FINAL VALIDATION PACKAGE

COMPLETE COPY OF VALIDATION PACKAGE TO:

Kathy Wendt H4-21

COMMENTS:

SDG J00733 **SAF-RC-116**

Date: 24 March 2010
To: Washington Closure Hanford Inc. (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA – Sediment
Subject: Wet Chemistry - Data Package No. J00733-TAL

INTRODUCTION

This memo presents the results of data validation on Data Package No. J00733 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J19JN8	2/14/10	Solid	C	See note 1
J19JN9	2/14/10	Solid	C	See note 1

1 – Chromium VI by 7196A.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below.

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 30 days for chromium VI.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR"

All holding times were acceptable.

- **Method Blanks**

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

All accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicate

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package J00733 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

None found.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Certificate of Analysis

TestAmerica Laboratories, Inc.

Washington Hanford Closure
2620 Fermi Avenue
Richland, WA 99354

February 26, 2010

Attention: Joan Kessner

SAF Number	:	RC-116
Date SDG Closed	:	February 15, 2010
Number of Samples	:	Two (2)
Sample Type		Other Solid
SDG Number		100733
Data Deliverable		15-Day / Summary

CASE NARRATIVE

I. Introduction

On February 15, 2010 two other solid samples were received at TestAmerica for chemistry analysis. Upon receipt, the samples were assigned the following laboratory ID number to correspond with the Washington Closure Hanford (WCH) specific ID.

WCH ID#	TARL ID#	MATRIX	DATE OF RECEIPT
J19JN8	LVN69	OTHER SOLID	02/15/10
J19JN9	LVN70	OTHER SOLID	02/15/10

II. Sample Receipt

The samples were received in good condition and no anomalies were noted during check-in.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

The requested analyses were:

Chemical Analysis
Hexavalent Chromium by EPA method 7196A

IV. Quality Control

The analytical results for each analysis performed includes a minimum of one laboratory control sample (LCS), one method (reagent) blank, and one duplicate sample analysis. Any exceptions have been noted in the "Comments" section.

QC and sample results are reported in the same units.

V. Comments

Chemical Analysis

Hexavalent Chromium by EPA method 7196A:

The matrix spike recovered low at 71%. The post digestive matrix spike recovered at 98.3% and the insoluble matrix spike recovered within limits at 98.1%. This implies strong reducing capacity in the sample, but not enough to exhaust the more copious insoluble matrix spike. Except as noted, the LCS, batch blank, sample, sample duplicate (J19JN9) and sample matrix spike (J19JN9) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

COMMENTS:

SDG J00736 **SAF-RC-116**

Date: 24 March 2010
To: Washington Closure Hanford Inc. (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA – Sediment
Subject: Wet Chemistry - Data Package No J00736-TAL

INTRODUCTION

This memo presents the results of data validation on Data Package No. J00736 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J19K87	2/15/10	Solid	C	See note 1
J19K88	2/15/10	Solid	C	See note 1

1 – Chromium VI by 7196A.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 30 days for chromium VI.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

Method Blanks

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

Due to a matrix spike recovery outside QC limits (42%), all chromium VI results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If

the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicate

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package J00736 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiency was noted:

- Due to a matrix spike recovery outside QC limits (42%), all chromium VI results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

SDG Number		J00716
Data Deliverable	:	15-Day / Summary

CASE NARRATIVE

I. Introduction

On February 16, 2010 two other solid samples were received at TestAmerica for chemistry analysis. Upon receipt, the samples were assigned the following laboratory ID number to correspond with the Washington Closure Hanford (WCH) specific ID:

WCH ID#	TAEL ID#	MATRIX	DATE OF RECEIPT
J19K87	LVQC2	OTHER SOLID	02/16/10
J19K88	LVQC5	OTHER SOLID	02/16/10

II. Sample Receipt

The samples were received in good condition and no anomalies were noted during check-in.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

The requested analyses were:

Chemical Analysis
Hexavalent Chromium by EPA method 7196A

IV. Quality Control

The analytical results for each analysis performed includes a minimum of one laboratory control sample (LCS), one method (reagent) blank, and one duplicate sample analysis. Any exceptions have been noted in the "Comments" section.

QC and sample results are reported in the same units.

V. Comments

Chemical Analysis

Hexavalent Chromium by EPA method 7196A:

The PbCrO4 initial concentration was approaching the linear range of the calibration so it was diluted and re analyzed. The matrix spike recovery (J19K87 MS) was low at 41.6%. Due to an analyst error a PDMS was not analyzed. Except as noted, the LCS, batch blank, samples, sample duplicate (J19K87), sample matrix spike (J19K87) and sample matrix spike duplicate (J19K87) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the *SOW*, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory *Manager*, or a designee as verified by the following signature.

Subject: Volatile - Data Package No. K1918-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1918 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Date
J19FD1	1/25/10	Solid	C	See note 1
J19FD8	1/25/10	Solid	C	See note 1
J19FD9	1/25/10	Solid	C	See note 1
J19FB0	1/25/10	Solid	C	See note 1
J19FW9	1/25/10	Solid	C	See note 1
J19FW0	1/25/10	Solid	C	See note 1
J19H28	1/25/10	Solid	C	See note 1
J19FX0	1/25/10	Solid	C	See note 1

1 – Volatiles by 8260C.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0. September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6 Additional Date Requested by Client

DATA QUALITY OBJECTIVES

Holding Times & Sample Preservation

Analytical holding times were assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows. Samples must be extracted and analyzed within 14 days of the date of sample collection.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Method Blanks**

Method blank analyses are conducted to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. Analytical results for analytes present in any sample at less than five times the concentration of that analyte found in the associated blank are qualified as non-detects and flagged "U". Common laboratory contaminants present in samples at less than ten times the concentration of that analyte found in the associated blank are qualified as non-detects. If a sample result is less than the CRQL and is less than five times (or less than ten times for lab contaminants) the highest associated blank result, the sample result value is raised to the CRQL level and qualified as undetected "U".

All method blank results were acceptable.

Field Blanks

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike/Matrix Spike Duplicate & Blank Spike Recoveries

Matrix spike/matrix spike duplicate analyses are used to assess the analytical accuracy of the reported data and the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike/matrix spike duplicate analyses are performed in duplicate using five compounds for which percent recoveries must be within a range of 50-150% or within laboratory control limits. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Undetected sample results with spike recoveries below control limits are qualified as estimates and flagged "UJ". Undetected sample results are not qualified if the spike recovery is above control limits. Sample results greater than five times the spike concentration require no qualification.

Due to an MS recovery outside QC limits, the acetone (153%) result in sample J19FW0 was qualified as estimate and flagged "J".

Due to LCS recoveries outside QC limits, the acetone (194%) and 2-hexanone (175%) results in sample J19FW0 were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Surrogate Recovery

The analyses of surrogate compounds provide a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the EPA CLP program. If two surrogates of the same class of compounds (base/neutral or acid) are out of control limits, all associated sample results greater than the contract required quantitation limit (CRQL) are qualified as estimates and flagged "J". Sample results less than the CRQL and below the lower control limit are qualified as estimates and flagged "UJ". Sample results less than the CRQL with recoveries above the upper control limit require no qualification. If a surrogate recovery is less than 10%, detects are qualified as estimates and flagged "J" and nondetects are rejected and flagged "UR".

All surrogate results were acceptable.

- **Precision**

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike (MS)/matrix spike duplicate (MSD) results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed by the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. Samples results must be within RPD limits of +/-30%. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

Due to an RPD outside QC limits, the acetone (41%) and 2-butanone (33%) results in samples J19FW9, J19FW0, J19H28 and J19FX0 were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

No field duplicate were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQL's) to ensure that laboratory detection levels meet the required criteria. Three methylene chloride results exceeded the RQL. Under the WCH statement of work, no qualification is required. All other analyes met the RQL.

- **Completeness**

Data package No. K1918 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to an MS recovery outside QC limits, the acetone (153%) result in sample J19FW0 was qualified as estimate and flagged "J".
- Due to LCS recoveries outside QC limits, the acetone (194%) and 2-hexanone (175%) results in sample J19FW0 were qualified as estimates and flagged "J".
- Due to an RPD outside QC limits, the acetone (41%) and 2-butanone (33%) results in samples J19FW9, J19FW0, J19H28 and J19FX0 were qualified as estimates and flagged "J"

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Three methylene chloride results exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the same quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications usable for decision-making purposes).

Client: WC-HANFORD RC-116
LVL #: 1001098
SDG/SAF # K1918 / RC-116

W.O. #: 60049-001-001-0001-00
Date Received: 01-27-2010

GC/MS VOLATILE

Eight (8) solid samples were collected on 01-25-2010.

The samples and associated QC samples were analyzed according to criteria set forth in Lionville Laboratory SOPs based on SW Method 8260B for TCL Volatile target compounds on 01-29-2010 and 02-04-2010.

The following is a summary of QC results accompanying the sample results. All samples are reported on a wet weight "as received" basis. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. The samples were analyzed within hold time.
2. Non-target compounds were not detected in these samples.
3. All surrogate recoveries were within acceptance criteria.
4. One (1) of seventy (70) matrix spike recoveries was outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR# 10VT022) has been enclosed.
5. One (1) of seventy (70) blank spike recoveries was outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR# 10VT022) has been enclosed.
6. The method blanks were below the reporting limit for all target compounds.
7. All internal standard area and retention time criteria were met.
8. Manual integrations are performed according to SOP QA-125 to produce quality data with utmost integrity. All manual integrations are required to be technically valid and properly documented. Appropriate technical flags are defined in the Glossary ("Technical Flags For Manual Integration").
9. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager

[illegible]

The results presented in this report relate only to the analytical testing and conditions of the samples at receipt and during storage. All pages of this report are integral parts of the analytical data. Therefore, this report should only be reproduced in its entirety of 41C pages.

10. "I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

Iain Daniels
Laboratory Manager
Lionville Laboratory

2/15/10
Date

Lionville Laboratory Sample Discrepancy Report (SDR)

SDR #: [illegible]

Initiator: [illegible]
Date: [illegible]
Client: [illegible] 14910

Batch: [illegible]
Samples: MS/MSD
Method: SW846-[illegible]

Parameter: VOA
Matrix: Soil
Prep Batch: [illegible]

1. Reason for SDR

a. COC Discrepancy
__ Tech Profile Error
__ Transcription Error
__ Client Request
__ Wrong Test Code
__ Sampler Error on C.O.C.
__ Other ______

b. General Discrepancy
__ Missing Sample/Extract
__ Hold Time Exceeded
__ Improper Bottle Type
__ Container Broken
__ Insufficient Sample
__ Not Amenable to Analysis
__ Wrong Sample Pulled
__ Preservation Wrong
__ Label ID's Illegible
__ Received Past Hold

Note: Verified by (Log-in) or (Prep Group) (circle) signature/date ______

c. Problem (Include all relevant specific results; attach data if necessary)

LCS/MS % recoveries for acetone exceed the upper QC limit of 20-200% (MSDCK)

2. Known or Probable Causes(s) Heated purge used for soil analysis tends to raise acetone recoveries

3. Discussion and Proposed Action
__ Re-log
__ Entire Batch
__ Following Samples: ______
__ Re-leach
__ Re-extract
__ Re-digest
__ Revise EDD
__ Change Test Code to ______
__ Place On/Take Off Hold (circle)

Other Description: Narrate

4. Project Manager Instructions signature/date 2/15/00
✓ Concur with Proposed Action
__ Disagree with Proposed Action, See Instruction
__ Include in Case Narrative
__ Client Contacted
Date/Person ______
__ Add
__ Cancel

5. Final Action signature/date 2/15/00
__ Verified re-[log][leach][extract][digest][analysis] (circle)
✓ Included in Case Narrative
__ Hard Copy COC Revised
__ Electronic COC Revised
__ EDD Corrections Completed

Other Explanation

When Final Action has been recorded, forward original to QA for disposition.

Route
__ Lab Manager: Daniels
L Project Mgr (circle) [✓ Johnson] / Stone
✓ Sample Prep (circle) ~~Ford~~
__ Log-in: King

Route
__ Metals: Welsh / ______
__ Inorganic: Perrone / ______
__ GC/LC: Carey / ______

2. INSTRUMENT TUNING AND CALIBRATION (Levels D and E)

GC/MS tuning/performance check acceptable? .... Yes No [✓ N/A]

Initial calibrations acceptable? .... Yes No [✓ N/A]

Continuing calibrations acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

Calculation check acceptable? .... Yes No [✓ N/A]

Comments:

GC/MS ORGANIC DATA VALIDATION CHECKLIST

3. BLANKS (Levels B, C, D, and E)

Calibration blanks analyzed? (Levels D, E) .... Yes No [✓ N/A]
Calibration blank results acceptable? (Levels D, E) .... Yes No [✓ N/A]
Laboratory blanks analyzed? .... [✓ Yes] No N/A
Laboratory blank results acceptable? .... [✓ Yes] No N/A
Field/trip blanks analyzed? (Levels C, D, E) .... Yes [✓ No] N/A
Field/trip blank results acceptable? (Levels C, D, E) .... Yes No [✓ N/A]
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]
Comments: NO FD

4. ACCURACY (Levels C, D, and E)

Surrogates/system monitoring compounds analyzed? .... [✓ Yes] No N/A
Surrogate/system monitoring compound recoveries acceptable? .... [✓ Yes] No N/A
Surrogates traceable? (Levels D, E) .... Yes No [✓ N/A]
Surrogates expired? (Levels D, E) .... Yes No [✓ N/A]
MS/MSD samples analyzed? .... [✓ Yes] No N/A
MS/MSD results acceptable? .... Yes [✓ No] N/A
MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]
MS/MSD standards? (Levels D, E) .... Yes No [✓ N/A]
LCS/BSS samples analyzed? .... [✓ Yes] No N/A
LCS/BSS results acceptable? .... Yes [✓ No] N/A
Standards traceable? (Levels D, E) .... Yes No [✓ N/A]
Standards expired? (Levels D, E) .... Yes No [✓ N/A]
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]
Performance audit sample(s) analyzed? .... Yes [✓ No] N/A
Performance audit sample results acceptable? .... Yes No [✓ N/A]
Comments: MS - acetone - WO - J
LCS - 2-hexanone - J - WO
LCS - acetone - J - WO

NO PAS

GC/MS ORGANIC DATA VALIDATION CHECKLIST

5. PRECISION (Levels C, D, and E)

MS/MSD samples analyzed? .... [✓ Yes] No N/A

MS/MSD RPD values acceptable? .... Yes [✓ No] N/A

MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]

Field duplicate RPD values acceptable? .... Yes No [✓ N/A]

Field split RPD values acceptable? .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: 95 - acetone - 41% - W9, W0, 28,95 - J
95 - 2-butanone - 33% - " " " - J

6. SYSTEM PERFORMANCE (Levels D and E)

Internal standards analyzed? .... Yes No [✓ N/A]

Internal standard areas acceptable? .... Yes No [✓ N/A]

Internal standard retention times acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

Transcription/calculation errors? .... Yes No [✓ N/A]

Comments:

7. HOLDING TIMES (all levels)

Samples properly preserved? .... [✓ Yes] No N/A

Sample holding times acceptable? .... [✓ Yes] No N/A

Comments:

GC/MS ORGANIC DATA VALIDATION CHECKLIST

8. COMPOUND IDENTIFICATION, QUANTITATION, AND DETECTION LIMITS (all levels)

Compound identification acceptable? (Levels D, E) .... Yes No [✓ N/A]

Compound quantitation acceptable? (Levels D, E) .... Yes No [✓ N/A]

Results reported for all requested analyses? .... [✓ Yes] No N/A

Results supported in the raw data? (Levels D, E) .... Yes No [✓ N/A]

Samples properly prepared? (Levels D, E) .... Yes No [✓ N/A]

Laboratory properly identified and coded all TIC? (Levels D, E) .... Yes No [✓ N/A]

Detection limits meet RDL? .... Yes [✓ No] N/A

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: 3 out

9. SAMPLE CLEANUP (Levels D and E)

GPC cleanup performed? .... Yes No [✓ N/A]

GPC check performed? .... Yes No [✓ N/A]

GPC check recoveries acceptable? .... Yes No [✓ N/A]

GPC calibration performed? .... Yes No [✓ N/A]

GPC calibration check performed? .... Yes No [✓ N/A]

GPC calibration check retention times acceptable? .... Yes No [✓ N/A]

Check/calibration materials traceable? .... Yes No [✓ N/A]

Check/calibration materials Expired? .... Yes No [✓ N/A]

Analytical batch QC given similar cleanup? .... Yes No [✓ N/A]

Transcription/Calculation Errors? .... Yes No [✓ N/A]

Date: 16 October 2009
To: Washington Closure Hanford Inc. (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA - Sediment
Subject: Radiochemistry - Data Package No. K1918-EB

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1918 prepared by Eberline Services (EB). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Date
J19F82-A	1/18/10	Solid	C	See note 1 & 2
J19FB0	1/25/10	Solid	C	See note 1
J19FD1	1/25/10	Solid	C	See note 1
J19FJ2	1/24/10	Solid	C	See note 1 & 2
J19FJ3	1/24/10	Solid	C	See note 1 & 2
J19H28	1/25/10	Solid	C	See note 1
J19HT6	1/24/10	Solid	C	See note 1 & 3
J19HT7	1/22/10	Solid	C	See note 1 & 3
J19HT8	1/23/10	Solid	C	See note 1 & 3
J19JB4	1/23/10	Solid	C	See note 1 & 3

1 – Alpha spectroscopy and gamma spectroscopy
2 – Total strontium.
3 – Total strontium & carbon-14

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008, Rev. 0, September 2006). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5 Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Holding times are calculated from Chain-of-Custody forms to determine the validity of the results. The maximum holding time for radiochemical analysis is 6 months

All holding times were acceptable.

- **Preparation (Method) Blanks**

Laboratory Blanks

Blank samples are analyzed to determine if positive results are due to laboratory reagent, sample container, or detector contamination. If blank analysis results indicate the presence of an analyte above the minimum detectable activity (MDA), the following qualifiers are applied: All positive sample results less than five times the highest blank concentration are qualified as estimates and flagged "J"; sample results below the MDA are qualified as undetected and flagged "U"; sample results above the MDA and greater than five times the highest blank concentration are not qualified.

All blank results were acceptable (although eight gamma spec analytes exceeded the RQL).

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Accuracy is evaluated from laboratory control sample (LCS) or blank spike sample (BSS) batch samples and spiked samples from the analytical batch. Measured activities are compared to the known added amounts. The acceptable LCS or BSS and matrix spike (MS) recovery range is 70-130%. In addition, samples may be spiked with a radiochemical tracer to assist in isolating the radioisotope of interest with the yield of the tracer being used in calculating sample activity. The acceptable range for tracer recovery is 20% to 105%. Spike sample results outside the above ranges result in associated sample results being qualified as estimates, or not qualified, depending on the activity of the individual sample. Results are rejected for LCS/BSS recoveries of less than 30% and tracer recoveries of less than 20%, and tracer recoveries of greater than 115% for detected results.

Due to the lack of an LCS analysis, all thorium-228 (aspec) and thorium-232 (aspec) results were qualified as estimates and flagged "J".

Due to the lack of a matrix spike analysis, all carbon-14 results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

- **Laboratory Duplicates**

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the contract required detection limit (CRDL) and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All duplicate results were acceptable.

Field Duplicates

No field duplicates were submitted for analysis.

Detection Levels

Reported analytical detection levels for undetected analytes are compared against the RCBRA tissue RQLs to ensure that laboratory detection levels meet the required criteria. Fifteen analytes exceeded the RQL. Under the WCH statement of work, no qualification is required. All other analytes met the RQL.

- **Completeness**

Data package No. K1918 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to the lack of an LCS analysis, all thorium-228 (aspec) and thorium-232 (aspec) results were qualified as estimates and flagged "J".

- Due to the lack of a matrix spike analysis, all carbon-14 results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Fifteen analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH statement of work are as follows:

U - Indicates the compound or analyte was analyzed for and not detected above the minimum detectable activity (MDA) in the sample. The value reported is the sample result corrected for sample dilution and moisture content by the laboratory. The data is usable for decision making purposes.

UJ - Indicates the compound or analyte was analyzed for and not detected at concentrations above the minimum detectable activity (MDA) in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate, but is usable for decision making purposes.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

Appendix 2

Summary of Data Qualification

RADIOCHEMISTRY DATA QUALIFICATION SUMMARY*

SDG: K1918	**REVIEWER: ELR**	**Project: RCBRA**	**PAGE 1 OF 1**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Thorium-228 (aspec) Thorium-232 (aspec)	J	All	No LCS analysis
Carbon-14	J	J19HT6, J19HT7 J19HT8, J19JB4	No MS analysis

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Laboratory Narrative and Chain-of-Custody Documentation

1.0 GENERAL

Washington Closure Hanford (WCH) Sample Delivery Group K1918 was composed of ten solid (other solid) samples designated under SAF No. RC-116 with a Project Designation of: Columbia River Component of the RCBRA – Sediment.

The samples were received as stated on the Chain-of-Custody documents. Any discrepancies are noted on the Eberline Analytical Sample Receipt Checklist. The results were sent to WCH via e-mail February 12, 2010.

Ms. Joan Kessner requested on February 3, 2010 that sample J19F62 be moved from SDG K1918 to SDG K1908, however, because analysis of sample J19F62 had already commenced by the time the phone call was received, it was decided to designate sample J19F62 with an "-A" and report its results in SDG K1918.

2.0 ANALYSIS NOTES

2.1 Carbon-14 Analysis

No problems were encountered during the course of the analyses.

2.2 Strontium-90 Analysis

No problems were encountered during the course of the analyses.

2.3 Isotopic Thorium Analysis

The Th-229 tracer yield for sample J19HT8 was 25%, less than the control limit of 30%. Due to time constraints, the sample was not reanalyzed. As a consequence of the low yield, the MDA was slightly elevated. No other problems were encountered during the course of the analyses.

2.4 Isotopic Uranium Analysis

No problems were encountered during the course of the reanalyses.

2.5 Isotopic Plutonium Analysis

No problems were encountered during the course of the analyses.

2.6 Gamma Spectroscopy

No problems were encountered during the course of the analyses.

3.0 Case Narrative Certification Statement

"I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. *Release of the data obtained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.*"

N. Joseph Verville

Date	16 April 2010
To:	Washington Closure Hanford Inc. (technical representative)
From:	ELR Consulting
Project:	Columbia River Component of the RCBRA – Sediment
Subject:	Metals - Data Package No. K1918-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1918 prepared by Lionville Laboratories Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Date
J19FD1	1/25/10	Solid	C	See note 1
J19FB0	1/25/10	Solid	C	See note 1
J19FW9	1/25/10	Solid	C	See note 1
J19FJ2	1/24/10	Solid	C	See note 1
J19FJ3	1/24/10	Solid	C	See note 1
J19H28	1/25/10	Solid	C	See note 1
J19HT6	1/24/10	Solid	C	See note 1
J19HT7	1/22/10	Solid	C	See note 1
J19HT8	1/23/10	Solid	C	See note 1
J19FX0	1/25/10	Solid	C	See note 1

1 - ICP metals by 6010B and mercury by 7471A

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

· Holding Times

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 6 months for ICP metals and 28 days for mercury.

All holding times were acceptable.

- **Preparation (Method) Blanks**

Preparation Blanks

At least one preparation blank, consisting of deionized distilled water processed through each sample preparation and analysis procedure, must be prepared and analyzed with every sample delivery group. In the case of positive blank results, samples with digestate concentrations less than five times the preparation blank value have had their associated values qualified as non-detected and flagged "U". Samples with concentrations of greater than five times the highest blank concentration do not require qualification.

In the case of negative blank results, if the absolute value exceeds the contract required detection limit (CRDL), all nondetects are rejected and flagged "UR" and all detects that are less than ten times the absolute value of the associated preparation blank result are qualified as estimates and flagged "J". If the absolute value of the negative preparation blank is greater than the instrument detection limit (IDL) and less than or equal to the CRDL, all nondetects are qualified as estimates and flagged "UJ" and all detects less than ten times the absolute value of the blank are qualified as estimates and flagged "J". If the sample results are greater than ten times the absolute value of the preparation blank, no qualification is necessary.

Due to method blank contamination, all tin results were qualified as undetected and flagged "UJ".

All other preparation blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130% Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

Due to matrix spike recoveries outside QC limits, all antimony (50%), calcium (52%), magnesium (56%) and zinc (69%) results were qualified as estimates and flagged "J"

Due to an LCS recovery outside QC limits (69%), all silicon results were qualified as estimates and flagged "J".

All accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicate

No field duplicate were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the project RQLs to ensure that laboratory detection levels meet the required criteria. All results met the RQL.

- **Completeness**

Data package No. K1918 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to method blank contamination, all tin results were qualified as undetected and flagged "UJ".
- Due to matrix spike recoveries outside QC limits, all antimony (50%), calcium (52%), magnesium (56%) and zinc (69%) results were qualified as estimates and flagged "J".
- Due to an LCS recovery outside QC limits (69%), all silicon results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

METALS DATA QUALIFICATION SUMMARY*

SDG: K1918	**REVIEWER: ELR**	**Project: RCBRA**	**PAGE 1 OF 1**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Tin	UJ	All	Method blank contamination
Antimony Calcium Magnesium Zinc	J	All	MS recovery
Silicon	J	All	LCS recovery

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Case Narrative

Client: WC-HANFORD RC-116
LVL#: 1001098
SDG/SAF#: K1918/RC-116

W.O.#: 60049-001-001-0001-00
Date Received: 01-27-10

METALS

The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise.

1. This narrative covers the analyses of 10 "other solid" samples.
2. The samples were prepared and analyzed in accordance with methods listed on the data report forms. The samples were reported on a wet weight, 'as-received' basis.
3. All analyses were performed within the required holding times.
4. Please refer to the Sample Receipt Check List for any sample discrepancies in LvLI's sample acceptance policy.
5. All Initial and Continuing Calibration Verifications (ICV/CCVs) were within the 90-110% control limits (80-120% for Mercury).
6. All Initial and Continuing Calibration Blanks (ICB/CCBs) were within control limits (less than the LOQ).
7. All preparation/method blanks (MB) were within method criteria (less than the Limit of Quantitation (3-10X the LOD), or samples greater than 20X MB value).
8. All ICP Interference Check Standards were within control limits.
9. All Standard Reference Material (SRM) analytes were within the Prediction Interval control limits supplied by the manufacturer.
10. The matrix spike (MS) recoveries for 13 analytes were outside the 75-125% control limits.
11. For analytes where the ICP MS is out-of-control, a post-digestion MS (PDS) and serial dilution are performed. A PDS was prepared at meaningful concentration level for the

following analytes:

Sample ID	Element	PDS Concentration (ppb)	PDS % Recovery
J19FD1	Aluminum	22,000	64.7
	Antimony	100	87.4
	Calcium	20,800	69.1
	Copper	100	80.7
	Iron	42,000	54.7
	Magnesium	21,600	67.3
	Manganese	1,000	67.9
	Lead	600	75.0
	Phosphorous	2,000	80.4
	Silicon	2,600	86.1
	Thallium	100	73.3
	Vanadium	1,000	82.5
	Zinc	1,100	81.8

12. The duplicate analyses for 15 analytes were outside the 20% Relative Percent Difference (RPD) control limit critieria. The ± 20% RPD control limit applies to sample results greater than ten times the MDL. The sample results for Arsenic, Beryllium, Boron, Cadmium, and Cobalt, were less than ten times the MDL.

13. For the purposes of this report, the data have been reported to the Limit of Detection (LOD). Values between the LOD and the Limit of Quantitation (LOQ) are acquired in a region of less-certain quantification.

14. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

15. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

Subject: Wet Chemistry - Data Package No. K1918-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1918 prepared by Eberline Services (EB). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Data
J19FD1	1/25/10	Solid	C	See note 1
J19FW9	1/25/10	Solid	C	See note 1
J19FJ2	1/24/10	Solid	C	See note 1
J19H28	1/25/10	Solid	C	See note 1
J19HT6	1/24/10	Solid	C	See note 1
J19HT7	1/22/10	Solid	C	See note 1
J19HT8	1/23/10	Solid	C	See note 1
J19FX0	1/25/10	Solid	C	See note 1

1 = Total organic carbon (TOC) by 415.1.

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 28 days for total organic carbon

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

Due to the holding time being exceeded by greater than twice the limit, all TOC results were qualified as estimates and flagged "J".

- **Method Blanks**

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

All accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicate

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package No. K1918 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to the holding time being exceeded by greater than twice the limit, all TOC results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the 134sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

INORGANIC NARRATIVE

1. This narrative covers the analysis of 8 solid samples.

2. The samples were prepared and analyzed in accordance with the methods indicated on the data summary report.

   Lionville Lab (LvL) is NELAP accredited by the State of Pennsylvania. For a complete list of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager. LvL certifies that all test results meet the requirements of NELAC with any exception noted in the following statements.

3. Sample holding times as required by the method and/or contract were not met due to the extensive organic carbon and inorganic carbon backlogs as well as the limited daily sample through-put for solid matrix samples.

4. The results presented in this report are derived from samples that met LvL's sample acceptance policy.

5. The method blank was within the method criteria.

6. The Laboratory Control Sample (LCS) was within the laboratory control limits.

7. The matrix spike recovery was within the 75-125% control limits.

8. The replicate analysis was outside the 20% Relative Percent Difference (RPD) control limit at 25% that may be attributed to sample inhomogeneity.

9. Total Organic Carbon samples are dried prior to analysis.

10. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard copy package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

J18KF2	4/20/09	Solid	C	See note 1

1 = Tritium, carbon-14, total strontium, technetium-99, alpha spectroscopy and gamma spectroscopy

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008, Rev. 0, September 2006). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Holding times are calculated from Chain-of-Custody forms to determine the validity of the results. The maximum holding time for radiochemical analysis is 6 months.

All holding times were acceptable.

- **Preparation (Method) Blanks**

Laboratory Blanks

Blank samples are analyzed to determine if positive results are due to laboratory reagent, sample container, or detector contamination. If blank analysis results indicate the presence of an analyte above the minimum detectable activity (MDA), the following qualifiers are applied: All positive sample results less than five times the highest blank concentration are qualified as estimates and flagged "J"; sample results below the MDA are qualified as undetected and flagged "U"; sample results above the MDA and greater than five times the highest blank concentration are not qualified.

All blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Accuracy is evaluated from laboratory control sample (LCS) or blank spike sample (BSS) batch samples and spiked samples from the analytical batch. Measured activities are compared to the known added amounts. The acceptable LCS or BSS and matrix spike (MS) recovery range is 70-130%. In addition, samples may be spiked with a radiochemical tracer to assist in isolating the radioisotope of interest with the yield of the tracer being used in calculating sample activity. The acceptable range for tracer recovery is 20% to 105%. Spike sample results outside the above ranges result in associated sample results being qualified as estimates, or not qualified, depending on the activity of the individual sample. Results are rejected for LCS/BSS recoveries of less than 30% and tracer recoveries of less than 20%, and tracer recoveries of greater than 115% for detected results.

Due to the lack of an LCS analysis, all thorium-228 (aspec) and thorium-232 (aspec) results were qualified as estimates and flagged "J".

Due to the lack of a matrix spike analysis, all tritium and carbon-14 results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

- **Laboratory Duplicates**

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the contract required detection limit (CRDL) and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All duplicate results were acceptable.

Field Duplicates

No field duplicates were submitted for analysis.

- **Detection Levels**

Reported analytical detection levels for undetected analytes are compared against the RCBRA tissue RQLs to ensure that laboratory detection levels meet the required criteria. Fifty-three analytes exceeded the RQL. Under the WCH statement of work, no qualification is required. All other analytes met the RQL

- **Completeness**

Data package No. K1606 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to the lack of an LCS analysis, all thorium-228 (aspec) and thorium-232 (aspec) results were qualified as estimates and flagged "J".
- Due to the lack of a matrix spike analysis, all tritium and carbon-14 results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Fifty-three analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH statement of work are as follows:

U - Indicates the compound or analyte was analyzed for and not detected above the minimum detectable activity (MDA) in the sample. The value reported is the sample result corrected for sample dilution and moisture content by the laboratory. The data is usable for decision making purposes.

UJ - Indicates the compound or analyte was analyzed for and not detected at concentrations above the minimum detectable activity (MDA) in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate, but is usable for decision making purposes.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

Appendix 2

Summary of Data Qualification

RADIOCHEMISTRY DATA QUALIFICATION SUMMARY*

SDG: K1608	**REVIEWER: ELR**	**Project: RCBRA**	**PAGE 1 OF 1**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Thorium-228 (aspec) Thorium-232 (aspec)	J	All	No LCS analysis
Tritium Carbon-14	J	All	No MS analysis

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Laboratory Narrative and Chain-of-Custody Documentation

1.0 GENERAL

Washington Closure Hanford (WCH) Sample Delivery Group K1608 was composed of twelve solid (other solid) samples designated under SAF No. RC-118 with a Project Designation of: Columbia River Component of the RCBRA – Tissues.

The samples were received as stated on the Chain-of-Custody documents. Any discrepancies are noted on the Eberline Analytical Sample Receipt Checklist. The results were sent to WCH via e-mail June 15, 2009.

2.0 ANALYSIS NOTES

2.1 Carbon-14 Analysis

No problems were encountered during the course of the analyses.

2.2 Tritium Analysis

No problems were encountered during the course of the analyses.

2.3 Strontium-90 Analysis

No problems were encountered during the course of the analyses.

2.4 Technetium-99 Analysis

No problems were encountered during the course of the analyses.

2.5 Isotopic Thorium Analysis

No problems were encountered during the course of the analyses.

2.6 Isotopic Uranium Analysis

No problems were encountered during the course of the analyses.

2.7 Isotopic Plutonium Analysis

No problems were encountered during the course of the analyses.

2.8 Gamma Spectroscopy

No problems were encountered during the course of the analyses.

3.0 Case Narrative Certification Statement

"I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data obtained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

6/15/09

Case Narrative

Page 1 of 1

1.0 GENERAL

Washington Closure Hanford (WCH) Sample Delivery Group K1589 was composed of sixteen solid (other solid) samples designated under SAF No. RC-118 with a Project Designation of Columbia River Component of the RCBRA – Tissues.

The samples were received as stated on the Chain-of-Custody documents. Any discrepancies are noted on the Eberline Analytical Sample Receipt Checklist. The results were sent to WCH via e-mail June 11, 2009.

2.0 ANALYSIS NOTES

2.1 Carbon-14 Analysis

No problems were encountered during the course of the analyses.

2.2 Tritium Analysis

No problems were encountered during the course of the analyses

2.3 Strontium-90 Analysis

No problems were encountered during the course of the analyses.

2.4 Technetium-99 Analysis

No problems were encountered during the course of the analyses.

2.5 Isotopic Thorium Analysis

No problems were encountered during the course of the analyses.

2.6 Isotopic Uranium Analysis

No problems were encountered during the course of the analyses.

2.7 Isotopic Plutonium Analysis

No problems were encountered during the course of the analyses.

2.8 Gamma Spectroscopy

No problems were encountered during the course of the analyses.

3.0 Case Narrative Certification Statement

"I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data obtained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

N. Joseph Verville

SPECIAL INSTRUCTIONS

(1) Gamma Spec - (Full List) (Americium-241, Antimony-125, Beryllium-7, Cesium-134, Cesium-137, Cobalt-60, Europium-152, Europium-154, Europium-155, Potassium-40, Radium-226, Radium-228, Ruthenium-106, Uranium-235, Uranium-238)
(2) Strontium-89,90 -- Total Sr; Isotopic Thorium (Thorium-232); Isotopic Uranium (Uranium-233/234, Uranium-235, Uranium-238); Isotopic Plutonium
(3) ICP Metals - 6010 (Full List) (Aluminum, Antimony, Arsenic, Barium, Beryllium, Bismuth, Boron, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Lithium, Magnesium, Manganese, Molybdenum, Nickel, Phosphorus, Potassium, Selenium, Silicon, Silver, Sodium, Strontium, Thallium, Tin, Uranium, Vanadium, Zinc); Mercury - 7471 - (CV)

Sampler unavailable to relinquish samples from EAS Refrigerator. EAS Custodian removed samples for shipping on 4/22/09

Solid

1. Completeness ☐ N/A

Technical verification forms present? Yes [✓ No] N/A

Comments:

2. Initial Calibration (Levels D, E) ☒ N/A

Instruments/detectors calibrated? Yes No N/A

Initial calibration acceptable? Yes No N/A

Standards NIST traceable? Yes No N/A

Standards Expired? Yes No N/A

Calculation check acceptable? Yes No N/A

Comments:

3. Continuing Calibration (Levels D, E) ☒ N/A

Calibration checked within required frequency? .... Yes No N/A

Calibration check acceptable? .... Yes No N/A

Calibration check standards traceable? .... Yes No N/A

Calibration check standards expired? .... Yes No N/A

Calculation check acceptable? .... Yes No N/A

Comments:

4. Background Counts (Levels D, E) .... ☒ N/A

Background Counts checked within required frequency? .... Yes No N/A

Background Counts acceptable? .... Yes No N/A

Calculation check acceptable? .... Yes No N/A

Comments:

5. Blanks (Levels B, C, D, E) .... ☐ N/A

Method blank analyzed within required frequency?..[✓ Yes] No N/A

Method blank results acceptable? ....[✓ Yes] No N/A

Analytes detected in method blank? ....Yes [✓ No] N/A

Field blank(s) analyzed? ....Yes [✓ No] N/A

Field blank results acceptable? ....Yes No [✓ N/A]

Analytes detected in field blank(s)?...Yes No [✓ N/A]

Transcription/Calculation Errors? (Levels D, E) ....Yes No [✓ N/A]

Comments: no FB

6. Laboratory Control Samples or Blank Spike Samples (Levels C, D, E) .... ☐ N/A

LCS /BSS analyzed within required frequency? ....[✓ Yes] No N/A

LCS/BSS recoveries acceptable?..[✓ Yes] No N/A

LCS/BSS traceable? (Levels D,E) ....Yes No [✓ N/A]

LCS/BSS expired? (Levels D,E)..Yes No [✓ N/A]

LCS/BSS levels correct? (Levels D,E) ....Yes No [✓ N/A]

Transcription/Calculation Errors? (Levels D, E) ....Yes No [✓ N/A]

Comments: NO Thorium-228 or Thorium-232 LCS - Jeff Cosper

7. Chemical Carrier Recovery (Levels C, D, E) .... ☒ N/A

Chemical carrier added? ....Yes No N/A

Chemical recovery acceptable?..Yes No N/A

Chemical carrier traceable? (Levels D, E) ....Yes No N/A

Chemical carrier expired? (Levels D, E) .... Yes No N/A

Transcription/Calculation errors? (Levels D, E) .... Yes No N/A

Comments:

8\. Tracer Recovery (Levels C, D, E) .... ☐ N/A

Tracer added? .... [✓ Yes] No N/A

Tracer recovery acceptable? .... [✓ Yes] No N/A

Tracer traceable? (Levels D, E) .... Yes No [✓ N/A]

Tracer expired? (Levels D, E) .... Yes No [✓ N/A]

Transcription/Calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments:

9\. Matrix Spikes (Levels C, D, E) .... ☐ N/A

Matrix spike analyzed? .... Yes [✓ No] N/A

Spike recoveries acceptable? .... Yes No [✓ N/A]

Spike source traceable? (Levels D, E) .... Yes No [✓ N/A]

Spike source expired? Levels D, E) .... Yes No [✓ N/A]

Transcription/Calculation Errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: NO MS ~~of~~ C-14 or 3H –

10. Duplicates (Levels C, D, E) .... ☐ N/A

Duplicates Analyzed at required frequency? .... [✓ Yes] No N/A

RPD Values Acceptable? .... [✓ Yes] No N/A

Transcription/Calculation Errors? (Levels D, E) .... Yes No [✓ N/A]

Comments:

11. Field QC Samples (Levels C, D E) .... ☐ N/A

Field duplicate sample(s) analyzed? .... Yes [✓ No] N/A

Field duplicate RPD values acceptable? .... Yes No [✓ N/A]

Field split sample(s) analyzed? .... Yes [✓ No] N/A

Field split RPD values acceptable? .... Yes No [✓ N/A]

Performance audit sample(s) analyzed? .... Yes [✓ No] N/A

Performance audit sample results acceptable? .... Yes No [✓ N/A]

Comments: No Field QC

12. Holding Times (All levels)

Are sample holding times acceptable? .... [✓ Yes] No N/A

Comments:

13. Results and Detection Limits (All Levels) ☐ N/A

Results reported for all required sample analyses? [✓ Yes] No N/A

Results supported in raw data? (Levels D, E) Yes No [✓ N/A]

Results Acceptable? (Levels D, E) Yes No [✓ N/A]

Transcription/Calculation errors? (Levels D, E) Yes No [✓ N/A]

MDA's meet required detection limits? Yes [✓ No] N/A

Transcription/calculation errors? (Levels D, E) Yes No [✓ N/A]

1 – Pesticides by 8081A

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008, Rev. 0, September 2006). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY OBJECTIVES

- **Holding Times**

Sample data were assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be extracted within 14 days of the date of sample collection and analyzed within 40 days from the date of extraction.

If holding times are exceeded by less than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detected sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Method Blank**

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation or analysis. At least one method blank analysis must be conducted for every 20 samples. Method blanks should not contain target compounds at a concentration greater than required quantitation limit (RQL). If target compounds are present, sample results less than five times the blank concentration are qualified as undetected and flagged "U". If the sample result is less than five times the blank concentration and less than RQL, the result is qualified as undetected and elevated to the RQL.

All method blank results were acceptable.

Field Blanks

No field blanks were submitted for analysis.

Accuracy

Matrix Spike & Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 50% to 150%. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Non-detected sample results with spike recoveries outside control limits are qualified as estimates and flagged "UJ". Sample results greater than five times the spike concentration require no qualification.

Due to matrix spike and matrix spike duplicate recoveries outside QC limits, the delta-BHC (49% & 44%) results in samples J18KD8, J18KD9, J18KF0, J18KF1, J18K78, J18K79, J18K80, J18K81 and J18K82 were qualified as estimates and flagged "J".

Due to matrix spike duplicate recoveries outside QC limits, the 4,4-DDT (39%) and endrin aldehyde (45%) results in samples J18KD8, J18KD9, J18KF0, J18KF1, J18K78, J18K79, J18K80, J18K81 and J18K82 were qualified as estimates and flagged "J".

Due to a matrix spike and matrix spike duplicate results outside QC limits, the delta-BHC (39% & 43%) results in samples J18KF2, J18K21, J18K22, J18K23, J18K24, J18K36, J18K37, J18K38, J18K39, J18K40, J18K63, J18K64, J18K65, J18K66, J18K67, J18K84, J18K85, J18K86 and J18K87 were qualified as estimates and flagged "J".

Due to the lack of a matrix spike, matrix spike duplicate or LCS analysis, all toxaphene results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Surrogate Recovery

The analysis of surrogate compounds provides a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the laboratory. When a surrogate compound recovery is outside the control window, all positively identified target compounds associated with the unacceptable surrogate recoveries are qualified as estimates and flagged "J". Non-detected compounds with surrogate recoveries less than the lower control limit are qualified as having an estimated detection limit and flagged "UJ". Non-detected compounds with surrogate recoveries above the upper control limit require no qualification.

Due to surrogate recoveries outside QC limits, all pesticide results in samples J18KF0, J18KF1, J18K78, J18K79, J18K63, J18K64, J18K65, J18K66 and J18K67 were qualified as estimates and flagged "J".

All other surrogate results were acceptable.

- **Precision**

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike/matrix spike duplicate results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed as the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. For soil samples, results must be within RPD limits of plus/minus 30%. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

Due to RPDs outside QC limits, the 4,4-DDT (67%) and methoxychlor (51%) results in samples J18KD8, J18KD9, J18KF0, J18KF1, J18K78, J18K79, J18K80, J18K81 and J18K82 were qualified as estimates and flagged "J".

Due to the lack of a matrix spike and matrix spike duplicate analysis, all toxaphene results were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

No field duplicates were submitted.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the project RQLs to ensure that laboratory detection levels meet the required criteria. All undetected analytes with a specified RQL exceeded the RQL (except toxaphene, methoxychlor, heptachlor, heptachlor epoxide and gamma chlordane). Under the WCH statement of work, no qualification is required.

- **Completeness**

Data Package No. K1608 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to matrix spike and matrix spike duplicate recoveries outside QC limits, the delta-BHC (49% & 44%) results in samples J18KD8, J18KD9, J18KF0, J18KF1, J18K78, J18K79, J18K80, J18K81 and J18K82 were qualified as estimates and flagged "J".
- Due to matrix spike duplicate recoveries outside QC limits, the 4,4-DDT (39%) and endrin aldehyde (45%) results in samples J18KD8, J18KD9, J18KF0, J18KF1, J18K78, J18K79, J18K80, J18K81 and J18K82 were qualified as estimates and flagged "J".
- Due to a matrix spike and matrix spike duplicate results outside QC limits, the delta-BHC (39% & 43%) results in samples J18KF2, J18K21, J18K22, J18K23, J18K24, J18K36, J18K37, J18K38, J18K39, J18K40, J18K63, J18K64, J18K65, J18K66, J18K67, J18K84, J18K85, J18K86 and J18K87 were qualified as estimates and flagged "J".
- Due to the lack of a matrix spike, matrix spike duplicate or LCS analysis, all toxaphene results were qualified as estimates and flagged "J".
- Due to surrogate recoveries outside QC limits, all pesticide results in samples J18KF0, J18KF1, J18K78, J18K79, J18K63, J18K64, J18K65, J18K66 and J18K67 were qualified as estimates and flagged "J".
- Due to RPDs outside QC limits, the 4,4-DDT (67%) and methoxychlor (51%) results in samples J18KD8, J18KD9, J18KF0, J18KF1, J18K78, J18K79, J18K80, J18K81 and J18K82 were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the procedures herein are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Case Narrative

Client: WC-HANFORD RC-118
LVL #: 0904069
SDG/SAF # K1608 /RC-118

W.O. #: 60049-001-001-0001-00
Date Received: 04-29-2009

CHLORINATED PESTICIDES

Nineteen (19) fish samples were collected on 04-20,21,22,23,27-2009.

The samples and their associated QC samples were extracted on 04-29-2009 and analyzed according to Lionville Laboratory SOPs based on SW846, 3rd Edition procedure on 04-30-2009 and 05-01,04-2009. The extraction procedure was based on method 3540C and the extracts were analyzed based on method 8081A.

All samples are reported on a wet weight basis. The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. All required holding times for extraction and analysis have been met.
2. The method blank was below the reporting limit for all target compounds.
3. Five (5) of forty-six (46) surrogate recoveries were outside acceptance criteria. However, surrogate recovery acceptance criteria were met (i.e., no more than one outlier per sample).
4. All blank spike recoveries were within acceptance criteria.
5. Five (5) of forty (40) matrix spike recoveries were outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR# 09GC127) has been enclosed.
6. All initial calibrations associated with this data set were within acceptance criteria.
7. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.

[illegible]

8. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

9. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the laboratory manager or a designee, as verified by the following signature.

Iain Daniels
Laboratory Manager
Lionville Laboratory

Date

Lionville Laboratory Sample Discrepancy Report (SDR)

SDR #: 096127

Initiator: Robert Carden
Date: 6/10/09
Client: [illegible]

Batch: 09[illegible]
Samples: MS/MSD
Method: [✓ SW846]/MCAWW/CLP/

Parameter: 0609H
Matrix: Solid (Fish)
Prep Batch: [illegible]

1. Reason for SDR

a. COC Discrepancy

__ Tech Profile Error
__ Transcription Error
__ Client Request
__ Wrong Test Code
Sampler Error on C-O-C
Other ______

b. General Discrepancy

__ Missing Sample/Extract*
__ Hold Time Exceeded
__ Improper Bottle Type
Container Broken
__ Insufficient Sample*
__ Not Amenable to Analysis
Wrong Sample Pulled
__ Preservation Wrong
__ Label ID's Illegible
Received Past Hold

Note*: Verified by [Login] or [Prep Group] (circle) signature/date ______

c. Problem (Include all relevant specific results, attach data if necessary)

Several spike recoveries outside QC acceptance criteria in MS/MSD

BS is good

2. Known or Probable Causes(s)

Matrix effects of fish samples

3. Discussion and Proposed Action

Other Description

__ Re-log
Entire Batch
__ Following Samples ______
__ Re-leach
Re-extract
__ Re-digest
__ Revise LOD
__ Change Test Code to ______
__ Place On/Take Off Hold (circle)

Narrative
[illegible]

4. Project Manager Instructions signature/date 6/10/09

✓ Concur with Proposed Action
Disagree with Proposed Action: See Instruction
__ Include in Case Narrative
Client Contacted
Date/Person ______ ______
Add
__ Cancel

5. Final Action signature/date 6/11/09

Other Explanation

__ Verified re-[log][leach][extract][digest][analysis] (circle)
✓ Included in Case Narrative
__ Hard Copy COC Revised
__ Electronic COC Revised
__ EOD Corrections Completed

When Final Action has been recorded, forward original to QA for disposition

Route

Exton, Pennsylvania 19341
Phone (610) 280-3000
Fax (610) 280-3041

Case Narrative

Client: WC-HANFORD RC-118
LVL #: 0904044
SDG/SAF # K1608 /RC-118

W.O. #: 60049-001-001-0001-00
Date Received: 04-21-2009

CHLORINATED PESTICIDES

Nine (9) fish samples were collected on 04-13,14,15,16-2009.

The samples and their associated QC samples were extracted on 04-21-2009 and analyzed according to Lionville Laboratory SOPs based on SW846, 3rd Edition procedure on 04-22,23-2009. The extraction procedure was based on method 3540C and the extracts were analyzed based on method 8081A.

All samples are reported on a wet weight basis. The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. All required holding times for extraction and analysis have been met.
2. The samples and associated QC samples received Copper-Sulfur cleanups according to Lionville Laboratory SOPs based on SW846 methods 3660A.
3. The method blank was below the reporting limit for all target compounds.
4. Four (4) of twenty-six (26) surrogate recoveries were outside acceptance criteria. However, surrogate recovery acceptance criteria were met (i.e., no more than one outlier per sample).
5. All blank spike recoveries were within acceptance criteria.
6. Fifteen (15) of forty (40) matrix spike recoveries were outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR# 09GC122) has been enclosed.
7. Due to the nature of these samples (fish), the chromatograms contain many small peaks, and it is possible that some of the reported hits are a result of coincidence, and the data user should use caution when making decisions based on this data.

8. All initial calibrations associated with this data set were within acceptance criteria.

9. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.

10. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

11. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the laboratory manager or a designee, as verified by the following signature.

Iain Daniels
Laboratory Manager
Lionville Laboratory

6-3-9
Date

Lionville Laboratory Sample Discrepancy Report (SDR)

SDR #: 09GC122

Initiator: [illegible]
Date: 6-1-09
Client: WC Hanford RC [illegible]

Batch: 0904044
Samples: [illegible]
Method: SW846/MCAWW/CLP [illegible]

Parameter: 06084
Matrix: Fish
Prep Batch: G904116

1. Reason for SDR

a. COC Discrepancy
- Tech Profile Error
- Transcription Error
- Client Request
- Wrong Test Code
- Sampler Error on C-O-C
- Other

b. General Discrepancy
- Missing Sample/Extract
- Hold Time Exceeded
- Improper Bottle Type
- Container Broken
- Insufficient Sample
- Not Amenable to Analysis
- Wrong Sample Pulled
- Preservation Wrong
- Label ID's Illegible
- Received Past Hold

Note: Verified by [Log-In] or [Prep Group] (circle) signature/date

c. Problem (Include all relevant specific results, attach data if necessary)

Fifteen of fourty Matrix spike recoveries outside the acceptance range.

2. Known or Probable Causes(s)

Bad Matrix and interference from Indigenous analytes
JD

3. Discussion and Proposed Action
- Re-log
  - Entire Batch
  - Following Samples
- Re-leach
- Re-extract
- Re-digest
- Revise EDD
- Change Test Code to
- Place On/Take Off Hold (circle)

Other Description:

Narrate
JD

4. Project Manager Instructions signature/date
- Concur with Proposed Action
- Disagree with Proposed Action, See Instruction
- Include in Case Narrative
- Client Contacted
- Date/Person
- Add
- Cancel

6/2/09

5. Final Action signature/date
- Verified re-[log][leach][extract][digest][analysis] (circle)
- ✓ Included in Case Narrative
- Hard Copy COC Revised
- Electronic COC Revised
- EDD Corrections Completed

Other Explanation

When Final Action has been recorded, forward original to QA for disposition.

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Technical verification documentation present? .... Yes [✓ No] N/A

Comments:

2. INSTRUMENT PERFORMANCE AND CALIBRATIONS (Levels D and E)

Initial calibrations acceptable? .... Yes No [✓ N/A]

Continuing calibrations acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

Calculation check acceptable? .... Yes No [✓ N/A]

DDT and endrin breakdowns acceptable? .... Yes No [✓ N/A]

Comments:

PCB DATA VALIDATION CHECKLIST

3. BLANKS (Levels B, C, D, and E)

Calibration blanks analyzed? (Levels D, E) .... Yes No [✓ N/A]
Calibration blank results acceptable? (Levels D, E) .... Yes No [✓ N/A]
Laboratory blanks analyzed? .... [✓ Yes] No N/A
Laboratory blank results acceptable? .... [✓ Yes] No N/A
Field/trip blanks analyzed? (Levels C, D, E) .... Yes [✓ No] N/A
Field/trip blank results acceptable? (Levels C, D, E) .... Yes No [✓ N/A]
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: NO FB

4. ACCURACY (Levels C, D, and E)

Surrogates analyzed? .... [✓ Yes] No N/A
Surrogate recoveries acceptable? .... Yes [✓ No] N/A
Surrogates traceable? (Levels D, E) .... Yes No [✓ N/A]
Surrogates expired? (Levels D, E) .... Yes No [✓ N/A]
MS/MSD samples analyzed? .... [✓ Yes] No N/A
MS/MSD results acceptable? .... Yes [✓ No] N/A
MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]
MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]
LCS/BSS samples analyzed? .... [✓ Yes] No N/A
LCS/BSS results acceptable? .... [✓ Yes] No N/A
Standards traceable? (Levels D, E) .... Yes No [✓ N/A]
Standards expired? (Levels D, E) .... Yes No [✓ N/A]
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]
Performance audit sample(s) analyzed? .... Yes [✓ No] N/A
Performance audit sample results acceptable? .... Yes No [✓ N/A]

Comments: MS – delta BHC (442)(332) – J all NO PAS
MSD – delta BHC (442)(432) – J all
MSD – 44DDT (332) Endrin Aldehyde (442) – D8-92 – J all
toxaphene – No MS, MSD or LCS – J all
Surr – 67, 66, 65, 64, 63, 74, 76, F1, F4, – J all

PCB DATA VALIDATION CHECKLIST

5. PRECISION (Levels C, D, and E)

Duplicate RPD values acceptable? .... Yes [✓ No] N/A

Duplicate results acceptable? .... Yes [✓ No] N/A

MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]

Field duplicate RPD values acceptable? .... Yes No [✓ N/A]

Field split RPD values acceptable? .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: 4,4-DDT-(67%) - J D8-82
methoxychlor (51%) - J D8-82

6. SYSTEM PERFORMANCE (Levels D and E)

Chromatographic performance acceptable? .... Yes No [✓ N/A]

Positive results resolved acceptably? .... Yes No [✓ N/A]

Comments:

7. HOLDING TIMES (all levels)

Samples properly preserved? .... [✓ Yes] No N/A

Sample holding times acceptable? .... [✓ Yes] No N/A

Comments:

PCB DATA VALIDATION CHECKLIST

8. COMPOUND IDENTIFICATION, QUANTITATION, AND DETECTION LIMITS (all levels)

Compound identification acceptable? (Levels D, E) .... Yes No [✓ N/A]

Compound quantitation acceptable? (Levels D, E) .... Yes No [✓ N/A]

Results reported for all requested analyses? .... [✓ Yes] No N/A

Results supported in the raw data? (Levels D, E) .... Yes No [✓ N/A]

Samples properly prepared? (Levels D, E) .... Yes No [✓ N/A]

Detection limits meet RDL? .... Yes [✓ No] N/A

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: Cell water RQL met - except toxaphene (methoxychlor, heptachlor, heptachlor epoxide, + gamma chlordane)

9. SAMPLE CLEANUP (Levels D and E)

Fluorisil ® (or other absorbent) cleanup performed? .... Yes No [✓ N/A]

Lot check performed? .... Yes No [✓ N/A]

Check recoveries acceptable? .... Yes No [✓ N/A]

GPC cleanup performed? .... Yes No [✓ N/A]

GPC check performed? .... Yes No [✓ N/A]

GPC check recoveries acceptable? .... Yes No [✓ N/A]

GPC calibration performed? .... Yes No [✓ N/A]

GPC calibration check performed? .... Yes No [✓ N/A]

GPC calibration check retention times acceptable? .... Yes No [✓ N/A]

Check/calibration materials traceable? .... Yes No [✓ N/A]

Check/calibration materials Expired? .... Yes No [✓ N/A]

Analytical batch QC given similar cleanup? .... Yes No [✓ N/A]

Transcription/Calculation Errors? .... Yes No [✓ N/A]

1 - ICP metals (6010B) & mercury by 7471A

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008, Rev 0, September 2006). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 6 months for ICP metals and 28 days for mercury.

All holding times were acceptable.

- **Preparation (Method) Blanks**

Preparation Blanks

At least one preparation blank, consisting of deionized distilled water processed through each sample preparation and analysis procedure, must be prepared and analyzed with every sample delivery group. In the case of positive blank results, samples with digestate concentrations less than five times the preparation blank value have had their associated values qualified as non-detected and flagged "UJ". Samples with concentrations of greater than five times the highest blank concentration do not require qualification.

In the case of negative blank results, if the absolute value exceeds the contract required detection limit (CRDL), all nondetects are rejected and flagged "UR" and all detects that are less than ten times the absolute value of the associated preparation blank result are qualified as estimates and flagged "J". If the absolute value of the negative preparation blank is greater than the instrument detection limit (IDL) and less than or equal to the CRDL, all nondetects are qualified as estimates and flagged "UJ" and all detects less than ten times the absolute value of the blank are qualified as estimates and flagged "J". If the sample results are greater than ten times the absolute value of the preparation blank, no qualification is necessary

Due to method blank contamination, all detected lead results (except J18K38) were qualified as undetected and flagged "UJ".

Due to method blank contamination, the tin result in sample J18KF0 was qualified as an estimate and flagged "UJ".

All other preparation blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

Due to a matrix spike recovery outside QC limits (326%), the calcium result in samples J18KD8, J18KD9, J18KF0, J18KF1, J18K78, J18K79, J18K80, J18K81 and J18K82 were qualified as estimates and flagged "J".

Due to LCS recoveries outside QC limits, all lead (49% & 61%) and thallium (0% & 0%) results were qualified as estimates and flagged "J".

Due to an LCS recovery outside QC limits (0%), the nickel results in samples J18KF2, J18K21, J18K22, J18K23, J18K24, J18K36, J18K37, J18K38, J18K39, J18K40, J18K63, J18K64, J18K65, J18K66, J18K67, J18K84, J18K85, J18K86 and J18K87 were qualified as estimates and flagged "J".

Due to LCS recoveries outside QC limits, all detected antimony (179% & 195%) and arsenic (221% & 185%) results were qualified as estimates and flagged "J".

Due to LCS recoveries outside QC limits, all detected copper (167%), tin (137%) and zinc (1550%) results in samples J18KF2, J18K21, J18K22, J18K23, J18K24, J18K36, J18K37, J18K38, J18K39, J18K40, J18K63, J18K64, J18K65, J18K66, J18K67, J18K84, J18K85, J18K86 and J18K87 were qualified as estimates and flagged "J".

Due to an LCS recovery outside QC limits (137%), all detected vanadium results in samples J18KD8, J18KD9, J18KF0, J18KF1, J18K78, J18K79, J18K80, J18K81 and J18K82 were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Precision

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

Due to RPDs outside QC limits, the tin (79%) and zinc (37%) results in samples J18KD8, J18KD9, J18KF0, J18KF1, J18K78, J18K79, J18K80, J18K81 and J18K82 were qualified as estimates and flagged "J".

Due to RPDs outside QC limits, all calcium (64% % 92%), magnesium (50% & 35%), phosphorous (71% & 61%) and strontium (91% 63%) results were qualified as estimates and flagged "J".

All other laboratory duplicate results were acceptable.

Field Duplicate

No field duplicates were submitted for analysis.

Analytical Detection Levels

Reported analytical detection levels are compared against the 100 and 300 Area RQLs to ensure that laboratory detection levels meet the required criteria. All undetected beryllium and ten lithium results exceeded the RQL. Under the WCH statement of work, no qualification is required. All other results met the RQL.

Completeness

Data package No. K1608 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to method blank contamination, all detected lead results (except J18K38) were qualified as undetected and flagged "UJ".

- Due to method blank contamination, the tin result in sample J18KF0 was qualified as an estimate and flagged "UJ".

- Due to a matrix spike recovery outside QC limits (326%), the calcium result in samples J18KD8, J18KD9, J18KF0, J18KF1, J18K78, J18K79, J18K80, J18K81 and J18K82 were qualified as estimates and flagged "J".

- Due to LCS recoveries outside QC limits, all lead (49% & 61%) and thallium (0% & 0%) results were qualified as estimates and flagged "J"

- Due to an LCS recovery outside QC limits (0%), the nickel results in samples J18KF2, J18K21, J18K22, J18K23, J18K24, J18K36, J18K37, J18K38, J18K39, J18K40, J18K63, J18K64, J18K65, J18K66, J18K67, J18K84, J18K85, J18K86 and J18K87 were qualified as estimates and flagged "J".

- Due to LCS recoveries outside QC limits, all detected antimony (179% & 195%) and arsenic (221% & 185%) results were qualified as estimates and flagged "J".

- Due to LCS recoveries outside QC limits, all detected copper (167%), tin (137%) and zinc (1550%) results in samples J18KF2, J18K21, J18K22, J18K23, J18K24, J18K36, J18K37, J18K38, J18K39, J18K40, J18K63, J18K64, J18K65, J18K66, J18K67, J18K84, J18K85, J18K86 and J18K87 were qualified as estimates and flagged "J".

- Due to an LCS recovery outside QC limits (137%), all detected vanadium results in samples J18KD8, J18KD9, J18KF0, J18KF1, J18K78, J18K79, J18K80, J18K81 and J18K82 were qualified as estimates and flagged "J".

- Due to RPDs outside QC limits, the tin (79%) and zinc (37%) results in samples J18KD8, J18KD9, J18KF0, J18KF1, J18K78, J18K79, J18K80, J18K81 and J18K82 were qualified as estimates and flagged "J"

- Due to RPDs outside QC limits, all calcium (64% % 92%), magnesium (50% & 35%), phosphorous (71% & 61%) and strontium (91% 63%) results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

All undetected beryllium and ten lithium results exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Case Narrative

Client: WC-HANFORD RC-118
LVL#: 0904044
SDG/SAF#: K1608 /RC-118

W.O.#: 60049-001-001-0001-00
Date Received: 04-21-09

METALS

The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise.

1. This narrative covers the analyses of 9 solid samples. The samples are reported on a wet weight, "as-received" basis.

2. The samples were prepared and analyzed in accordance with methods checked on the attached glossary.

   All samples, with the exception of samples J18K78 and J18K81, were rerun with 12-fold dilutions for Phosphorus due to high concentrations.

3. All analyses were performed within the required holding times.

4. All Initial and Continuing Calibration Verifications (ICV/CCVs) were within the 90-110% control limits (80-120% for Mercury) with the exception of the ending CCV for Potassium at 111.4% in file ICP0524B. The SRM may be biased slightly high for Potassium.

5. All Initial and Continuing Calibration Blanks (ICB/CCBs) were within control limits (less than the LOQ).

6. All preparation/method blanks (MB) were within method criteria (less than the Limit of Quantitation (3-10X the LOD), or samples greater than 20X MB value).

7. All ICP Interference Check Standards were within control limits.

8. All Standard Reference Material (SRM) results were within the Prediction Intervals provided by the manufacturer.

9. The matrix spike (MS) recoveries for 2 analytes were outside the 75-125% control limits.

10. For analytes where the ICP MS is out-of-control, a post-digestion MS (PDS) and serial dilution are performed. A PDS was prepared at meaningful concentration level for the following analytes:

Sample ID	Element	PDS Concentration (ppb)	PDS % Recovery
J18KD8	Calcium	10,000	69.3
	Phosphorous	24,000	96.5

11. The duplicate analyses for 11 analytes were outside the 20% Relative Percent Difference (RPD) control limits.

12. For the purposes of this report, the data has been reported to the Limit of Detection (LOD). Values between the LOD and the Limit of Quantitation (LOQ) are acquired in a region of less-certain quantification.

13. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

14. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

Case Narrative

Client: WC-HANFORD RC-118
LVL#: 0904069
SDG/SAF#: K1608 /RC-118

W.O.#: 60049-001-001-0001-00
Date Received: 04-29-09

METALS

The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise.

1. This narrative covers the analyses of 19 solid samples. The samples are reported on a wet weight, 'as-received' basis.

2. The samples were prepared and analyzed in accordance with methods checked on the attached glossary.

   All samples, with the exception of samples J18K37, J18K39, and J18J84 through J18J87, were rerun with 12-fold dilutions for Phosphorous due to high concentrations. Sample J18K24 was also reported with a 12-fold dilution for Calcium due to high concentration.

3. All analyses were performed within the required holding times.

4. All Initial and Continuing Calibration Verifications (ICV/CCVs) were within the 90-110% control limits (80-120% for Mercury) with the exception of the ending CCV for Potassium at 111.4% in file ICP0524B. The SRM may be biased slightly high for Potassium.

5. All Initial and Continuing Calibration Blanks (ICB/CCBs) were within control limits (less than the LOQ).

6. All preparation/method blanks (MB) were within method criteria (less than the Limit of Quantitation (3-10X the LOD), or samples greater than 20X MB value).

7. All ICP Interference Check Standards were within control limits.

8. All Standard Reference Material (SRM) results were within the Prediction Intervals provided by the manufacturer with the exception of Arsenic, Copper, Nickel, and Zinc.

9. The matrix spike (MS) recoveries for 2 analytes were outside the 75-125% control limits.

10. For analytes where the ICP MS is out-of-control, a post-digestion MS (PDS) and serial dilution are performed. A PDS was prepared at meaningful concentration level for the following analytes.

Sample ID	Element	PDS Concentration (ppb)	PDS % Recovery
J18KF2	Calcium	10,000	44.0
	Phosphorous	60,000	91.2

11. The duplicate analyses for 12 analytes were outside the 20% Relative Percent Difference (RPD) control limits.

12. For the purposes of this report, the data has been reported to the Limit of Detection (LOD). Values between the LOD and the Limit of Quantitation (LOQ) are acquired in a region of less-certain quantification.

13. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

14. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

Page 1 of 1

Collector: Josh McGough

Company Contact: JOAN KESSNER

Telephone No.: 375-4688

Project Coordinator: KESSNER, JH

Price Code: 9K

Data Turnaround: 45 Days

Project Designation: Columbia River Component of the RCBRA - Tissues

Sampling Location: 100SA-WE?, FILLET

SAF No.: RC-118

Ice Chest No.: GWSC-050

Field Logbook No.: 1611

COA: DESURC6520

Method of Shipment: FED EX

Shipped To: EBERLINE SERVICES ~~OAK RIDGE~~ RICHMOND

Offsite Property No.: N/A

Bill of Lading/Air Bill No.: Fdx# 796557072603

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Technical verification documentation present? .... Yes [✓ No] N/A

Comments: ____________

2. INSTRUMENT PERFORMANCE AND CALIBRATIONS (Levels D and E)

Initial calibrations performed on all instruments? .... Yes No [✓ N/A]

Initial calibrations acceptable? .... Yes No [✓ N/A]

ICP interference checks acceptable? .... Yes No [✓ N/A]

ICV and CCV checks performed on all instruments? .... Yes No [✓ N/A]

ICV and CCV checks acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

Calculation check acceptable? .... Yes No [✓ N/A]

Comments: ____________

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

3. BLANKS (Levels B, C, D, and E)

ICB and CCB checks performed for all applicable analyses? (Levels D, E) .... Yes No [✓ N/A]

ICB and CCB results acceptable? (Levels D, E) .... ~~Yes~~ No [✓ N/A]

Laboratory blanks analyzed? .... [✓ Yes] No N/A

Laboratory blank results acceptable? .... Yes [✓ No] N/A

Field blanks analyzed? (Levels C, D, E) .... Yes [✓ No] N/A

Field blank results acceptable? (Levels C, D, E) .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: Pb – ~~21, 23, 29, 35, 37~~ all but 38 – UJ (detects)

tin – FO – UJ

no FB

4. ACCURACY (Levels C, D, and E)

MS/MSD samples analyzed? .... [✓ Yes] No N/A

MS/MSD results acceptable? .... [✓ Yes] No N/A

MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]

LCS/BSS samples analyzed? .... [✓ Yes] No N/A

LCS/BSS results acceptable? .... Yes [✓ No] N/A

Standards traceable? (Levels D, E) .... Yes No [✓ N/A]

Standards expired? (Levels D, E) .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Performance audit sample(s) analyzed? .... Yes [✓ No] N/A

Performance audit sample results acceptable? .... Yes No [✓ N/A]

Comments: ~~MS – calcium (434%) – J (F2-87)~~ no PAS

MS – calcium (326%) – J all in D8/F2

LCS – antimony (171% + 155%) – J detects lead (41% + 61%) – J all

arsenic (221% + 185%) – J detects

copper (167%) – J detects (F2-87)

nickel (0%) – J (F2-87)

thallium (0%) – J ~~(F2)~~ all

tin (137%) – J (F2-87)

vanadium (153%) – J (D8-82)

zinc (155%) – J (F2-87)

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

5. PRECISION (Levels C, D, and E)

Duplicate RPD values acceptable? .... Yes [✓ No] N/A

Duplicate results acceptable? .... Yes [✓ No] N/A

MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]

Field duplicate RPD values acceptable? .... Yes No [✓ N/A]

Field split RPD values acceptable? .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: Calcium (64% & 92%) - J all Zinc (37%) J D8-82
magnesium (35% & 90%) - J all
phosphorus (61% & 71%) J all
Strontium (63% & 91%) - J all
tin (77%) - J (D8-82)

6. ICP QUALITY CONTROL (Levels D and E)

ICP serial dilution samples analyzed? .... Yes No [✓ N/A]

ICP serial dilution %D values acceptable? .... Yes No [✓ N/A]

ICP post digestion spike required? .... Yes No [✓ N/A]

ICP post digestion spike values acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

Transcription/calculation errors? .... Yes No [✓ N/A]

Comments:

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

7. FURNACE AA QUALITY CONTROL (Levels D and E)

Duplicate injections performed as required? Yes No [✓ N/A]
Duplicate injection %RSD values acceptable? Yes No [✓ N/A]
Analytical spikes performed as required? Yes No [✓ N/A]
Analytical spike recoveries acceptable? Yes No [✓ N/A]
Standards traceable? Yes No [✓ N/A]
Standards expired? Yes No [✓ N/A]
MSA performed as required? Yes No [✓ N/A]
MSA results acceptable? Yes No [✓ N/A]
Transcription/calculation errors? Yes No [✓ N/A]
Comments:

8. HOLDING TIMES (all levels)

Samples properly preserved? [✓ Yes] No N/A
Sample holding times acceptable? [✓ Yes] No N/A
Comments:

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

9. RESULT QUANTITATION AND DETECTION LIMITS (all levels)

Results reported for all requested analyses? .... [✓ Yes] No N/A

Results supported in the raw data? (Levels D, E).......... Yes No [✓ N/A]

Samples properly prepared? (Levels D, E).......... Yes No [✓ N/A]

Detection limits meet RDL? .... Yes [✓ No] N/A

Transcription/calculation errors? (Levels D, E).......... Yes No [✓ N/A]

Comments: Lithium - 𝍸 𝍸
beryllium - all

J19461	8/17/09	Solid	C	See note 1

1 - ICP metals (6010B) & mercury by 7471A.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 6 months for ICP metals and 28 days for mercury.

Due to the holding time being exceeded by less than twice the limit, all mercury results (except samples J19458 & J19459) were qualified as estimates and flagged "J"

All other holding times were acceptable.

- **Preparation (Method) Blanks**

Preparation Blanks

At least one preparation blank, consisting of deionized distilled water processed through each sample preparation and analysis procedure, must be prepared and analyzed with every sample delivery group. In the case of positive blank results, samples with digestate concentrations less than five times the preparation blank value have had their associated values qualified as non-detected and flagged "UJ". Samples with concentrations of greater than five times the highest blank concentration do not require qualification.

In the case of negative blank results, if the absolute value exceeds the contract required detection limit (CRDL), all nondetects are rejected and flagged "UR" and all detects that are less than ten times the absolute value of the associated preparation blank result are qualified as estimates and flagged "J". If the absolute value of the negative preparation blank is greater than the instrument detection limit (IDL) and less than or equal to the CRDL, all nondetects are qualified as estimates and flagged "UJ" and all detects less than ten times the absolute value of the blank are qualified as estimates and flagged "J". If the sample results are greater than ten times the absolute value of the preparation blank, no qualification is necessary.

Due to method blank contamination, the tin result in samples J19030, J19054, J190N6, J19460, J19461, J19458 and J19459 were qualified as undetected and flagged "UJ".

Due to method blank contamination,, all detected lithium results were qualified as undetected and flagged "UJ".

All other preparation blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ" Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

Due to matrix spike recoveries outside QC limits, all calcium (188% & 153%) and potassium (41% & 47%) results (except J19458 & J19459) were qualified as estimates and flagged "J".

Due to a matrix spike recovery outside QC limits, the iron (314%) result in samples J19029, J19030, J19031, J19032, J19033, J19052, J19053, J19054, J19055, J19056 and J190L6 were qualified as estimates and flagged "J".

Due to an LCS recovery outside QC limits (59%), the silicon result in samples J19029, J19030, J19031, J19032, J19033, J19052, J19053, J19054, J19055, J19056 and J190L6 were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

Due to RPDs outside QC limits, the chromium (79%), calcium (49%) and strontium (52%) results in samples J19029, J19030, J19031, J19032, J19033, J19052, J19053, J19054, J19055, J19056 and J190L6 were qualified as estimates and flagged "J".

Due to RPDs outside QC limits, all magnesium (37%) and zinc (39%) results in samples J190L7, J190L8, J190L9, J190M0, J190N6, J190N7, J190N8, J190N9, J190P0, J19460 and J19461 were qualified as estimates and flagged "J".

All other laboratory duplicate results were acceptable.

Field Duplicate

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the 100 and 300 Area RQLs to ensure that laboratory detection levels meet the required criteria. All undetected beryllium results exceeded the RQL. Under the WCH statement of work, no qualification is required. All other results met the RQL.

- **Completeness**

Data package No. K1735 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to the holding time being exceeded by less than twice the limit, all mercury results (except samples J19458 & J19459) were qualified as estimates and flagged "J".

- Due to method blank contamination, the tin result in samples J19030, J19054, J190N6, J19460, J19461, J19458 and J19459 were qualified as undetected and flagged "UJ".

- Due to method blank contamination, all detected lithium results were qualified as undetected and flagged "UJ".

- Due to matrix spike recoveries outside QC limits, all calcium (188% & 153%) and potassium (41% & 47%) results (except J19458 & J19459) were qualified as estimates and flagged "J".

- Due to a matrix spike recovery outside QC limits, the iron (314%) result in samples J19029, J19030, J19031, J19032, J19033, J19052, J19053, J19054, J19055, J19056 and J190L6 were qualified as estimates and flagged "J".

- Due to an LCS recovery outside QC limits (59%), the silicon result in samples J19029, J19030, J19031, J19032, J19033, J19052, J19053, J19054, J19055, J19056 and J190L6 were qualified as estimates and flagged "J".

- Due to RPDs outside QC limits, the chromium (79%), calcium (49%) and strontium (52%) results in samples J19029, J19030, J19031, J19032, J19033, J19052, J19053, J19054, J19055, J19056 and J190L6 were qualified as estimates and flagged "J"

- Due to RPDs outside QC limits, all magnesium (37%) and zinc (39%) results in samples J190L7, J190L8, J190L9, J190M0, J190N6, J190N7, J190N8, J190N9, J190P0, J19460 and J19461 were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

All undetected beryllium results exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Case Narrative

Client: WC-HANFORD RC-118
LVL#: 0910007
SDG/SAF#: K1735/RC-118

W.O.#: 60049-001-001-0001-00
Date Received: 10-01-09

METALS

The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise.

1. This narrative covers the analyses of 22 fish samples.

2. The samples were prepared and analyzed in accordance with methods listed on the data report forms. The samples were reported on a wet weight, 'as-received' basis.

   Samples J19029, J19031, J19053, J19055, J19056, J190L6, J190L7, J190L8, J190L9, and samples J190N6 through J19P0, were rerun and reported with 12-fold dilutions for Phosphorous due to high concentration. Calcium was also reported for sample J19056 from the 12-fold dilution for Phosphorous.

3. All analyses were performed within the required holding times.

4. All Initial and Continuing Calibration Verifications (ICV/CCVs) were within the 90-110% control limits (80-120% for Mercury).

5. All Initial and Continuing Calibration Blanks (ICB/CCBs) were within control limits (less than the LOQ).

6. All preparation/method blanks (MB) were within method criteria (less than the Limit of Quantitation (3-10X the LOD), or samples greater than 20X MB value).

7. All ICP Interference Check Standards were within control limits.

8. All Standard Reference Material (SRM) analytes were within the Prediction Interval control limits supplied by the manufacturer.

9. The matrix spike (MS) recoveries for 6 analytes were outside the 75-125% control limits.

10. For analytes where the ICP MS is out-of-control, a post-digestion MS (PDS) and serial dilution are performed. A PDS was prepared at meaningful concentration level for the following analytes:

Sample ID	Element	PDS Concentration (ppb)	PDS % Recovery
J19029	Calcium	20,800	93.3
	Iron	2,000	99.7
	Potassium	22,000	95.9
	Phosphorous	30,000	95.6
J190L7	Calcium	20,800	98.5
	Potassium	2,000	60.0

11. The duplicate analyses for 17 analytes were outside the 20% Relative Percent Difference (RPD) control limits.

12. For the purposes of this report, the data have been reported to the Limit of Detection (LOD). Values between the LOD and the Limit of Quantitation (LOQ) are acquired in a region of less-certain quantification.

13. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

14. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

METALS

The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise.

1. This narrative covers the analyses of 2 solid samples.

2. The samples were prepared and analyzed in accordance with methods listed on the data report forms. The samples were reported on a wet weight, 'as-received' basis.

   Sample J19459 was rerun and reported with a 6-fold dilution for Phosphorous due to high concentration.

3. All analyses were performed within the required holding times.

4. All Initial and Continuing Calibration Verifications (ICV/CCVs) were within the 90-110% control limits (80-120% for Mercury).

5. All Initial and Continuing Calibration Blanks (ICB/CCBs) were within control limits (less than the LOQ).

6. All preparation/method blanks (MB) were within method criteria (less than the Limit of Quantitation (3-10X the LOD), or samples greater than 20X MB value).

7. All ICP Interference Check Standards were within control limits.

8. All Standard Reference Material (SRM) analytes were within the Prediction Interval control limits supplied by the manufacturer.

9. The matrix spike (MS) recovery for Mercury was outside the 75-125% control limits.

10. A serial dilution is performed for Mercury when the MS is out of control.

11. The duplicate analyses for 5 analytes were outside the 20% Relative Percent Difference (RPD) control limits.

12. For the purposes of this report, the data have been reported to the Limit of Detection (LOD). Values between the LOD and the Limit of Quantitation (LOQ) are acquired in a region of less-certain quantification.

13. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

Subject: Radiochemistry - Data Package No. K1735-EB

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1735 prepared by Eberline Services (EB). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Date
J19029	8/25/09	Solid	C	See note 1

1 – Tritium, carbon-14, total strontium, technetium-99, alpha spectroscopy and gamma spectroscopy

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Holding times are calculated from Chain-of-Custody forms to determine the validity of the results. The maximum holding time for radiochemical analysis is 6 months.

All holding times were acceptable.

- **Preparation (Method) Blanks**

Laboratory Blanks

Blank samples are analyzed to determine if positive results are due to laboratory reagent, sample container, or detector contamination. If blank analysis results indicate the presence of an analyte above the minimum detectable activity (MDA), the following qualifiers are applied: All positive sample results less than five times the highest blank concentration are qualified as estimates and flagged "J"; sample results below the MDA are qualified as undetected and flagged "U"; sample results above the MDA and greater than five times the highest blank concentration are not qualified.

All blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Accuracy is evaluated from laboratory control sample (LCS) or blank spike sample (BSS) batch samples and spiked samples from the analytical batch. Measured activities are compared to the known added amounts. The acceptable LCS or BSS and matrix spike (MS) recovery range is 70-130%. In addition, samples may be spiked with a radiochemical tracer to assist in isolating the radioisotope of interest with the yield of 8/25/09the tracer being used in calculating sample activity. The acceptable range for tracer recovery is 20% to 105%. Spike sample results outside the above ranges result in associated sample results being qualified as estimates, or not qualified, depending on the activity of the individual sample. Results are rejected for LCS/BSS recoveries of less than 30% and tracer recoveries of less than 20%, and tracer recoveries of greater than 115% for detected results.

Due to the lack of an LCS analysis, all thorium-228 (aspec) and thorium-232 (aspec) results were qualified as estimates and flagged "J"

Due to the lack of a matrix spike analysis, all tritium and carbon-14 results were qualified as estimates and flagged "J"

All other accuracy results were acceptable.

- **Laboratory Duplicates**

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the contract required detection limit (CRDL) and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All duplicate results were acceptable.

Field Duplicates

No field duplicates were submitted for analysis.

- **Detection Levels**

Reported analytical detection levels for undetected analytes are compared against the RCBRA tissue RQLs to ensure that laboratory detection levels meet the required criteria. Forty analytes exceeded the RQL. Under the WCH statement of work, no qualification is required. All other analytes met the RQL.

- **Completeness**

Data package No. K1735 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to the lack of an LCS analysis, all thorium-228 (aspec) and thorium-232 (aspec) results were qualified as estimates and flagged "J".
- Due to the lack of a matrix spike analysis, all tritium and carbon-14 results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Forty analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH statement of work are as follows:

U - Indicates the compound or analyte was analyzed for and not detected above the minimum detectable activity (MDA) in the sample. The value reported is the sample result corrected for sample dilution and moisture content by the laboratory. The data is usable for decision making purposes.

UJ - Indicates the compound or analyte was analyzed for and not detected at concentrations above the minimum detectable activity (MDA) in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate, but is usable for decision making purposes.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

Appendix 2

Summary of Data Qualification

RADIOCHEMISTRY DATA QUALIFICATION SUMMARY*

SDG: K1735	**REVIEWER: ELR**	**Project: RCBRA**	**PAGE 1 OF 1**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Thorium-228 (aspec) Thorium-232 (aspec)	J	All	No LCS analysis
Tritium Carbon-14	J	All	No MS analysis

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Laboratory Narrative and Chain-of-Custody Documentation

Case Narrative

1.0 GENERAL

Washington Closure Hanford (WCH) Sample Delivery Group K1735 was composed of twenty solid (other solid) samples designated under SAF No. RC-118 with a Project Designation of. Columbia River Component of the RCBRA – Tissues.

The samples were received as stated on the Chain-of-Custody documents. Any discrepancies are noted on the Eberline Analytical Sample Receipt Checklist. The results were sent to WCH via e-mail October 8, 2009.

2.0 ANALYSIS NOTES

2.1 Carbon-14 Analysis

No problems were encountered during the course of the analyses.

2.2 Tritium Analysis

No problems were encountered during the course of the analyses.

2.3 Strontium-90 Analysis

No problems were encountered during the course of the analyses

2.4 Technetium-99 Analysis

No problems were encountered during the course of the analyses

2.5 Isotopic Thorium Analysis

No problems were encountered during the course of the analyses.

2.6 Isotopic Uranium Analysis

No problems were encountered during the course of the analyses

2.7 Isotopic Plutonium Analysis

No problems were encountered during the course of the analyses.

2.8 Gamma Spectroscopy

No problems were encountered during the course of the analyses.

3.0 Case Narrative Certification Statement

"I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data obtained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

N. Joseph Verville

Case Narrative

1.0 GENERAL

Washington Closure Hanford (WCH) Sample Delivery Group K1735 was composed of four solid (other solid) samples designated under SAF No. RC-118 with a Project Designation of, Columbia River Component of the RCBRA - Tissues.

The samples were received as stated on the Chain-of-Custody documents. Any discrepancies are noted on the Eberline Analytical Sample Receipt Checklist. The results were sent to WCH via e-mail September 29, 2009

2.0 ANALYSIS NOTES

2.1 Carbon-14 Analysis

No problems were encountered during the course of the analyses.

2.2 Tritium Analysis

No problems were encountered during the course of the analyses.

2.3 Strontium-90 Analysis

No problems were encountered during the course of the analyses.

2.4 Technetium-99 Analysis

No problems were encountered during the course of the analyses.

2.5 Isotopic Thorium Analysis

The initial Th-229 tracer yield to sample J19461 was less than 8%. The sample was replated from the original plating solution and recounted. The recount result was acceptable with a 38% yield, however due to that relatively low yield the sample MDA was 1.33 pCi/g, slightly greater than the required 1.0 pCi/g. No other problems were encountered during the course of the analyses.

2.6 Isotopic Uranium Analysis

No problems were encountered during the course of the analyses.

2.7 Isotopic Plutonium Analysis

No problems were encountered during the course of the analyses.

2.8 Gamma Spectroscopy

No problems were encountered during the course of the analyses.

3.0 Case Narrative Certification Statement

"I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data obtained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

SPECIAL INSTRUCTIONS

Sampler unavailable to remove samples from controlled storage. Shipper removed samples from storage location taking custody & preparing for shipment to lab.

(1) Gamma Spec - (Full List) [Americium-241, Antimony-125, Beryllium-7, Cerium-144, Cesium-134, Cesium-137, Cobalt-60, Europium-152, Europium-154, Europium-155, Potassium-40, Radium-226, Radium-228, Ruthenium-106, Uranium-235, Uranium-238]

(2) Strontium-89,90 - Total Sr, Isotopic Thorium [Thorium-232]; Isotopic Uranium [Uranium-233/234, Uranium-235, Uranium-238]; Isotopic Plutonium

(3) ICP Metals - 6010 (Full List) [Aluminum, Antimony, Arsenic, Barium, Beryllium, Bismuth, Boron, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Lithium, Magnesium, Manganese, Molybdenum, Nickel, Phosphorus, Potassium, Selenium, Silicon, Silver, Sodium, Strontium, Thallium, Tin, Uranium, Vanadium, Zinc], Mercury - 7471 - (CV)

Note: Transshipping required. Contact Joan Kessner for further instructions maintain freeze.

SPECIAL INSTRUCTIONS

Sampler unavailable to remove samples from controlled storage. Shipper removed samples from storage location taking custody of samples for shipment to lab.

(1) Gamma Spec - (Full List) {Americium-241, Antimony-125, Beryllium-7, Cesium-134, Cesium-137, Cobalt-60, Europium-152, Europium-154, Europium-155, Potassium-40, Radium-226, Radium-228, Ruthenium-106, Uranium-235, Uranium-238}

(2) Strontium-89,90 – Total Sr; Isotopic Thorium {Thorium-232}; Isotopic Uranium {Uranium-233/234, Uranium-235, Uranium-238}, Isotopic Plutonium

(3) ICP Metals - 6010 (Full List) {Aluminum, Antimony, Arsenic, Barium, Beryllium, Bismuth, Boron, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Lithium, Magnesium, Manganese, Molybdenum, Nickel, Phosphorus, Potassium, Selenium, Silicon, Silver, Sodium, Strontium, Thallium, Tin, Uranium, Vanadium, Zinc}; Mercury - 7471 - (CV)

Note: Transhipping required. Contact Joan Kessner for further instructions. Maintain freeze.

SPECIAL INSTRUCTIONS
TRANSSHIPPING REQUIRED. Perform gamma spec then contact Joan Kessner for additional analysis. Maintain FREEZE cooling as practical.

(1) Gamma Spec - (Full List) (Americium-241, Antimony-125, Beryllium-7, Cesium-134, Cesium-137, Cobalt-60, Europium-152, Europium-154, Europium-155, Potassium-40, Radium-226, Radium-228, Ruthenium-106, Uranium-235, Uranium-238)
(2) Strontium-89,90 -- Total Sr; Isotopic Thorium; Isotopic Uranium; Isotopic Plutonium
(3) ICP Metals - 6010 (Full List) (Aluminum, Antimony, Arsenic, Barium, Beryllium, Bismuth, Boron, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Lithium, Magnesium, Manganese, Molybdenum, Nickel, Phosphorus, Potassium, Selenium, Silicon, Silver, Sodium, Strontium, Thallium, Tin, Uranium, Vanadium, Zinc); Mercury - 7471 - (CV)

[illegible]
Sampler unavailable to remove samples from controlled storage. Shipper removed samples from storage location taking custody

1. Completeness .... ☐ N/A

Technical verification forms present? .... Yes [✓ No] N/A

Comments:

2. Initial Calibration (Levels D, E) .... ☒ N/A

Instruments/detectors calibrated? .... Yes No N/A

Initial calibration acceptable? .... Yes No N/A

Standards NIST traceable? .... Yes No N/A

Standards Expired? .... Yes No N/A

Calculation check acceptable? .... Yes No N/A

Comments:

3. Continuing Calibration (Levels D, E) ☒ N/A

Calibration checked within required frequency? .... Yes No N/A

Calibration check acceptable? .... Yes No N/A

Calibration check standards traceable? .... Yes No N/A

Calibration check standards expired? .... Yes No N/A

Calculation check acceptable? .... Yes No N/A

Comments:

4. Background Counts (Levels D, E) .... ☒ N/A

Background Counts checked within required frequency? .... Yes No N/A

Background Counts acceptable? .... Yes No N/A

Calculation check acceptable? .... Yes No N/A

Comments:

5. Blanks (Levels B, C, D, E) ☐ N/A

Method blank analyzed within required frequency? Yes No [✓ N/A]

Method blank results acceptable? [✓ Yes] No N/A

Analytes detected in method blank? ~~Yes~~ [✓ No] N/A

Field blank(s) analyzed? Yes [✓ No] N/A

Field blank results acceptable? Yes No [✓ N/A]

Analytes detected in field blank(s)? Yes No [✓ N/A]

Transcription/Calculation Errors? (Levels D, E) Yes No [✓ N/A]

Comments: no FB

6. Laboratory Control Samples or Blank Spike Samples (Levels C, D, E) ☐ N/A

LCS /BSS analyzed within required frequency? [✓ Yes] No N/A

LCS/BSS recoveries acceptable? [✓ Yes] No N/A

LCS/BSS traceable? (Levels D,E) Yes No [✓ N/A]

LCS/BSS expired? (Levels D,E) Yes No [✓ N/A]

LCS/BSS levels correct? (Levels D,E) Yes No [✓ N/A]

Transcription/Calculation Errors? (Levels D, E) Yes No [✓ N/A]

Comments: thorium -228 + 232 (αspec) no LCS – Jull

7. Chemical Carrier Recovery (Levels C, D, E) ☒ N/A

Chemical carrier added? Yes No N/A

Chemical recovery acceptable? Yes No N/A

Chemical carrier traceable? (Levels D, E) Yes No N/A

Chemical carrier expired? (Levels D, E) .... Yes No N/A

Transcription/Calculation errors? (Levels D, E) .... Yes No N/A

Comments:

8. Tracer Recovery (Levels C, D, E) .... ☐ N/A

Tracer added? .... [✓ Yes] No N/A

Tracer recovery acceptable? .... [✓ Yes] No N/A

Tracer traceable? (Levels D, E) .... Yes No [✓ N/A]

Tracer expired? (Levels D, E) .... Yes No [✓ N/A]

Transcription/Calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments:

9. Matrix Spikes (Levels C, D, E) .... ☐ N/A

Matrix spike analyzed? .... Yes [✓ No] N/A

Spike recoveries acceptable? .... Yes No [✓ N/A]

Spike source traceable? (Levels D, E) .... Yes No [✓ N/A]

Spike source expired? Levels D, E) .... Yes No [✓ N/A]

Transcription/Calculation Errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: no MS - J all 3H + C-14

10. Duplicates (Levels C, D, E) ☐ N/A

Duplicates Analyzed at required frequency? [✓ Yes] No N/A

RPD Values Acceptable? [✓ Yes] No N/A

Transcription/Calculation Errors? (Levels D, E) Yes No [✓ N/A]

Comments:

11. Field QC Samples (Levels C, D E) ☐ N/A

Field duplicate sample(s) analyzed? Yes [✓ No] N/A

Field duplicate RPD values acceptable? Yes No [✓ N/A]

Field split sample(s) analyzed? Yes [✓ No] N/A

Field split RPD values acceptable? Yes No [✓ N/A]

Performance audit sample(s) analyzed? Yes [✓ No] N/A

Performance audit sample results acceptable? Yes No [✓ N/A]

Comments:

12. Holding Times (All levels)

Are sample holding times acceptable? [✓ Yes] No N/A

Comments:

13. Results and Detection Limits (All Levels) .... ☐ N/A

Results reported for all required sample analyses? .... [✓ Yes] No N/A

Results supported in raw data?(Levels D, E) .... Yes No [✓ N/A]

Results Acceptable? (Levels D, E) .... Yes No [✓ N/A]

Transcription/Calculation errors? (Levels D, E) .... Yes No [✓ N/A]

MDA's meet required detection limits? .... Yes [✓ No] N/A

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

COMPLETE COPY OF VALIDATION PACKAGE TO:

Kathy Wendt H4-21

COMMENTS:

SDG K1785 **SAF-RC-118**

Date: 8 February 2010
To: Washington Closure Hanford (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA - Tissue
Subject: Inorganic - Data Package No. K1785-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1785 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Date
J18X86	9/24/09	Solid	C	See note 1

1 - ICP metals (6010B) & mercury by 7471A

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008, Rev 0, September 2006). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3 Qualified Data Summary and Annotated Laboratory Reports
Appendix 4 Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 6 months for ICP metals and 28 days for mercury.

Due to the holding time being exceeded by greater than twice the limit, the mercury results in samples J18XB1, J18XB2, J18XB3, J18XB4, J18XB5, J18XF6, J18XF7, J18XF8, J18XF9, J18XH0, J195V7, J195V8, J195V9, J195W0, J19661, J19662 and J19747 were qualified as estimates and flagged "J".

All other holding times were acceptable.

- **Preparation (Method) Blanks**

Preparation Blanks

At least one preparation blank, consisting of deionized distilled water processed through each sample preparation and analysis procedure, must be prepared and analyzed with every sample delivery group. In the case of positive blank results, samples with digestate concentrations less than five times the preparation blank value have had their associated values qualified as non-detected and flagged "UJ". Samples with concentrations of greater than five times the highest blank concentration do not require qualification.

In the case of negative blank results, if the absolute value exceeds the contract required detection limit (CRDL), all nondetects are rejected and flagged "UR" and all detects that are less than ten times the absolute value of the associated preparation blank result are qualified as estimates and flagged "J". If the absolute value of the negative preparation blank is greater than the instrument detection limit (IDL) and less than or equal to the CRDL, all nondetects are qualified as estimates and flagged "UJ" and all detects less than ten times the absolute value of the blank are qualified as estimates and flagged "J". If the sample results are greater than ten times the absolute value of the preparation blank, no qualification is necessary

Due to method blank contamination, the lithium results in samples J18XB6, J18XB7, J18XB8, J18XB9, J18XC0, J18XD1, J18XD2, J18XD3 and J18XH1 were qualified as estimates and flagged "UJ".

Due to method blank contamination, the tin result in sample J18XD2 was qualified as an estimate and flagged "UJ".

All other preparation blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

Due to LCS recoveries outside QC limits (148%, 43%, 53%), all silicon results were qualified as estimates and flagged "J".

Due to a matrix spike recovery outside QC limits (166%), the mercury results in samples J18XB6, J18XB7, J18XB8, J18XB9, J18XC0, J18XD1, J18XD2, J18XD3, J18XD4, J18XD5 and J18XH1 were qualified as estimates and flagged "J"

All other accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

Due to an RPD outside QC limits (32%), all strontium results in samples J18XB6, J18XB7, J18XB8, J18XB9, J18XC0, J18XD1, J18XD2, J18XD3, J18XD4, J18XD5 and J18XH1 were qualified as estimates and flagged "J"

All other laboratory duplicate results were acceptable.

Field Duplicate

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the 100 and 300 Area RQLs to ensure that laboratory detection levels meet the required criteria. All undetected beryllium results exceeded the RQL. Under the WCH statement of work, no qualification is required. All other results met the RQL.

- **Completeness**

Data package No. K1785 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to the holding time being exceeded by greater than twice the limit, the mercury results in samples J18XB1, J18XB2, J18XB3, J18XB4, J18XB5, J18XF6, J18XF7, J18XF8, J18XF9, J18XH0, J195V7, J195V8, J195V9, J195W0, J19661, J19662 and J19747 were qualified as estimates and flagged "J".
- Due to method blank contamination, the lithium results in samples J18XB6, J18XB7, J18XB8, J18XB9, J18XC0, J18XD1, J18XD2, J18XD3 and J18XH1 were qualified as estimates and flagged "UJ".
- Due to method blank contamination, the tin result in sample J18XD2 was qualified as an estimate and flagged "UJ".
- Due to LCS recoveries outside QC limits (148%, 43%, 53%), all silicon results were qualified as estimates and flagged "J".
- Due to a matrix spike recovery outside QC limits (166%), the mercury results in samples J18XB6, J18XB7, J18XB8, J18XB9, J18XC0, J18XD1, J18XD2, J18XD3, J18XD4, J18XD5 and J18XH1 were qualified as estimates and flagged "J".
- Due to an RPD outside QC limits (32%), all strontium results in samples J18XB6, J18XB7, J18XB8, J18XB9, J18XC0, J18XD1, J18XD2, J18XD3, J18XD4, J18XD5 and J18XH1 were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

All undetected beryllium results exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Date Received: 09-30-09

METALS

The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise

1. This narrative covers the analyses of 22 fish samples.

2. The samples were prepared and analyzed in accordance with methods listed on the data report forms. The samples were reported on a wet weight, 'as-received' basis.

   Samples J18XB6, J18XB7, J18XB8, J18XB9, J18XC0, J18XD1, J18XD2, J18XD5, J18XH1, J18XH2, J18XH3, J18XH4, J18XH5, J19748, J18X86, and J18X87 were rerun and reported with 12-fold dilutions for Phosphorous due to high concentration.

3. All analyses were performed within the required holding times.

4. All Initial and Continuing Calibration Verifications (ICV/CCVs) were within the 90-110% control limits (80-120% for Mercury).

5. All Initial and Continuing Calibration Blanks (ICB/CCBs) were within control limits (less than the LOQ).

6. All preparation/method blanks (MB) were within method criteria (less than the Limit of Quantitation (3-10X the LOD), or samples greater than 20X MB value).

7. All ICP Interference Check Standards were within control limits.

8. All Standard Reference Material (SRM) analytes were within the Prediction Interval control limits supplied by the manufacturer.

9. The matrix spike (MS) recoveries for 6 analytes were outside the 75-125% control limits.

10. For analytes where the ICP MS is out-of-control, a post-digestion MS (PDS) and serial

dilution are performed. A serial dilution is performed for Mercury. A PDS was prepared at meaningful concentration level for the following analytes:

Sample ID	Element	PDS Concentration (ppb)	PDS % Recovery
J18XB6	Calcium	800	no recovery*
	Potassium	22,000	98.9
	Phosphorous	2,500	106.4
J18XH2	Calcium	800	no recovery*
	Phosphorous	2,500	97.2

* spike added was an insufficient amount

11. The duplicate analyses for 9 analytes were outside the 20% Relative Percent Difference (RPD) control limits.

12. For the purposes of this report, the data have been reported to the Limit of Detection (LOD). Values between the LOD and the Limit of Quantitation (LOQ) are acquired in a region of less-certain quantification.

13. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

14. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

METALS

The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise.

1. This narrative covers the analyses of 12 fish samples.
2. The samples were prepared and analyzed in accordance with methods listed on the data report forms. The samples were reported on a wet weight, 'as-received' basis.
3. All analyses were performed within the required holding times with the exception of Mercury. The samples were received past hold for Mercury.
4. Please refer to the Sample Receipt Check List for any sample discrepancies in LvLI's sample acceptance policy.
5. All Initial and Continuing Calibration Verifications (ICV/CCVs) were within the 90-110% control limits (80-120% for Mercury) with the exception of CCV3 (110.4%) and CCV4 (111.5%) for Bismuth. All sample results for Bismuth were below the reporting limit.
6. All Initial and Continuing Calibration Blanks (ICB/CCBs) were within control limits (less than the LOQ).
7. All preparation/method blanks (MB) were within method criteria (less than the Limit of Quantitation (3-10X the LOD), or samples greater than 20X MB value).
8. All ICP Interference Check Standards were within control limits.
9. All Standard Reference Material (SRM) analytes were within the Prediction Interval control limits supplied by the manufacturer.
10. The matrix spike (MS) recovery for 1 analyte was outside the 75-125% control limits.

11. For analytes where the ICP MS is out-of-control, a post-digestion MS (PDS) and serial dilution are performed. A PDS was prepared at meaningful concentration level for the following analytes:

Sample ID	Element	PDS Concentration (ppb)	PDS % Recovery
J18XF6	Phosphorous	6,000	97.3

12. All duplicate analyses were within the 20% Relative Percent Difference (RPD) control limit criteria. The ± 20% RPD control limit applies to sample results greater than ten times the MDL. The sample result for Tin was less than ten times the MDL.

13. For the purposes of this report, the data have been reported to the Limit of Detection (LOD). Values between the LOD and the Limit of Quantitation (LOQ) are acquired in a region of less-certain quantification.

14. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

15. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. METALS

The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise.

1. This narrative covers the analyses of 5 fish samples.

2. The samples were prepared and analyzed in accordance with methods listed on the data report forms. The samples were reported on a wet weight, 'as-received' basis.

3. All analyses were performed within the required holding times with the exception of Mercury. The samples were received past hold for Mercury.

4. Please refer to the Sample Receipt Check List for any sample discrepancies in LvL's sample acceptance policy.

5. All Initial and Continuing Calibration Verifications (ICV/CCVs) were within the 90-110% control limits (80-120% for Mercury) with the exception of CCV3 and CCV4 for Bismuth. All sample results contained within this report were surrounded by QC within control.

6. All Initial and Continuing Calibration Blanks (ICB/CCBs) were within control limits (less than the LOQ).

7. All preparation/method blanks (MB) were within method criteria (less than the Limit of Quantitation (3-10X the LOD), or samples greater than 20X MB value).

8. All ICP Interference Check Standards were within control limits.

9. All Standard Reference Material (SRM) analytes were within the Prediction Interval control limits supplied by the manufacturer.

10. All matrix spike (MS) recoveries were within the 75-125% control limits.

11. All duplicate analyses were within the 20% Relative Percent Difference (RPD) control limit criteria. The ± 20% RPD control limit applies to sample results greater than ten times the MDL. The sample result for Tin was less than ten times the MDL.

12. For the purposes of this report, the data have been reported to the Limit of Detection (LOD). Values between the LOD and the Limit of Quantitation (LOQ) are acquired in a region of less-certain quantification.

13. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Technical verification documentation present? .... Yes [✓ No] N/A
Comments:

2. INSTRUMENT PERFORMANCE AND CALIBRATIONS (Levels D and E)

Initial calibrations performed on all instruments? .... Yes No [✓ N/A]
Initial calibrations acceptable? .... Yes No [✓ N/A]
ICP interference checks acceptable? .... Yes No [✓ N/A]
ICV and CCV checks performed on all instruments? .... Yes No [✓ N/A]
ICV and CCV checks acceptable? .... Yes No [✓ N/A]
Standards traceable? .... Yes No [✓ N/A]
Standards expired? .... Yes No [✓ N/A]
Calculation check acceptable? .... Yes No [✓ N/A]
Comments:

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

3. BLANKS (Levels B, C, D, and E)

ICB and CCB checks performed for all applicable analyses? (Levels D, E) .... Yes No [✓ N/A]

ICB and CCB results acceptable? (Levels D, E) .... Yes No [✓ N/A]

Laboratory blanks analyzed? .... [✓ Yes] No N/A

Laboratory blank results acceptable? .... Yes [✓ No] N/A

Field blanks analyzed? (Levels C, D, E) .... Yes [✓ No] N/A

Field blank results acceptable? (Levels C, D, E) .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: Lithium - B6, B7, B8, B9, C0, D1, D2, D3, H(- UJ

Iron - D7,

No FB

4. ACCURACY (Levels C, D, and E)

MS/MSD samples analyzed? .... [✓ Yes] No N/A

MS/MSD results acceptable? .... Yes [✓ No] N/A

MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]

LCS/BSS samples analyzed? .... [✓ Yes] No N/A

LCS/BSS results acceptable? .... Yes [✓ No] N/A

Standards traceable? (Levels D, E) .... Yes No [✓ N/A]

Standards expired? (Levels D, E) .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Performance audit sample(s) analyzed? .... Yes [✓ No] N/A

Performance audit sample results acceptable? .... Yes No [✓ N/A]

Comments: MS - Selenium (73) - J detects

LCS - Silicon (43%) (90) - J detects (91)

LCS - Antimony (135%) (91) - J detects (none)

MS - Hg - (74) - J all detects

No PAS

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

5. PRECISION (Levels C, D, and E)

Duplicate RPD values acceptable? .... Yes [✓ No] N/A
Duplicate results acceptable? .... Yes [✓ No] N/A
MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]
MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]
Field duplicate RPD values acceptable? .... Yes No [✓ N/A]
Field split RPD values acceptable? .... Yes No [✓ N/A]
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: Strontium - (32%) (20) - J all

6. ICP QUALITY CONTROL (Levels D and E)

ICP serial dilution samples analyzed? .... Yes No [✓ N/A]
ICP serial dilution %D values acceptable? .... Yes No [✓ N/A]
ICP post digestion spike required? .... Yes No [✓ N/A]
ICP post digestion spike values acceptable? .... Yes No [✓ N/A]
Standards traceable? .... Yes No [✓ N/A]
Standards expired? .... Yes No [✓ N/A]
Transcription/calculation errors? .... Yes No [✓ N/A]
Comments:

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

7. FURNACE AA QUALITY CONTROL (Levels D and E)

Duplicate injections performed as required? .... Yes No [✓ N/A]
Duplicate injection %RSD values acceptable? .... Yes No [✓ N/A]
Analytical spikes performed as required? .... Yes No [✓ N/A]
Analytical spike recoveries acceptable? .... Yes No [✓ N/A]
Standards traceable? .... Yes No [✓ N/A]
Standards expired? .... Yes No [✓ N/A]
MSA performed as required? .... Yes No [✓ N/A]
MSA results acceptable? .... Yes No [✓ N/A]
Transcription/calculation errors? .... Yes No [✓ N/A]
Comments:

8. HOLDING TIMES (all levels)

Samples properly preserved? .... [✓ Yes] No N/A
Sample holding times acceptable? .... ~~Yes~~ [✓ No] N/A
Comments:

HG-FL-747-52A-J all
B1-B5

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

9. RESULT QUANTITATION AND DETECTION LIMITS (all levels)

Results reported for all requested analyses? .... [✓ Yes] No N/A

Results supported in the raw data? (Levels D, E). .... Yes No [✓ N/A]

Samples properly prepared? (Levels D, E) .... Yes No [✓ N/A]

Detection limits meet RDL? .... ~~Yes~~ [✓ No] N/A

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: beryllium = all [illegible] [illegible]

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1765 prepared by Eberline Services (EB). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Date
J18X86	9/24/09	Solid	C	See note 1
J18X87	9/25/09	Solid	C	See note 1

1 Tritium, carbon-14, total strontium, technetium 99, alpha spectroscopy and gamma spectroscopy.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008, Rev. 0, September 2006). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY PARAMETERS

Holding Times

Holding times are calculated from Chain-of-Custody forms to determine the validity of the results. The maximum holding time for radiochemical analysis is 6 months.

All holding times were acceptable

Preparation (Method) Blanks

Laboratory Blanks

Blank samples are analyzed to determine if positive results are due to laboratory reagent, sample container, or detector contamination. If blank analysis results indicate the presence of an analyte above the minimum detectable activity (MDA), the following qualifiers are applied: All positive sample results less than five times the highest blank concentration are qualified as estimates and flagged "J"; sample results below the MDA are qualified as undetected and flagged "U"; sample results above the MDA and greater than five times the highest blank concentration are not qualified.

All blank results were acceptable

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Accuracy is evaluated from laboratory control sample (LCS) or blank spike sample (BSS) batch samples and spiked samples from the analytical batch. Measured activities are compared to the known added amounts. The acceptable LCS or BSS and matrix spike (MS) recovery range is 70-130%. In addition, samples may be spiked with a radiochemical tracer to assist in isolating the radioisotope of interest with the yield of 8/25/09the tracer being used in calculating sample activity. The acceptable range for tracer recovery is 20% to 105%. Spike sample results outside the above ranges result in associated sample results being qualified as estimates, or not qualified, depending on the activity of the individual sample. Results are rejected for LCS/BSS recoveries of less than 30% and tracer recoveries of less than 20%, and tracer recoveries of greater than 115% for detected results.

Due to the lack of an LCS analysis, all thorium-228 (aspec) and thorium-232 (aspec) results were qualified as estimates and flagged "J".

Due to the lack of a matrix spike analysis, all tritium and carbon-14 results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

- **Laboratory Duplicates**

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the contract required detection limit (CRDL) and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All duplicate results were acceptable.

Field Duplicates

No field duplicates were submitted for analysis.

- **Detection Levels**

Reported analytical detection levels for undetected analytes are compared against the RCBRA tissue RQLs to ensure that laboratory detection levels meet the required criteria. Fiftty-six analytes exceeded the RQL. Under the WCH statement of work, no qualification is required. All other analytes met the RQL.

- **Completeness**

Data package No. K1785 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to the lack of an LCS analysis, all thorium-228 (aspec) and thorium-232 (aspec) results were qualified as estimates and flagged "J".
- Due to the lack of a matrix spike analysis, all tritium and carbon-14 results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Fifty-six analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH statement of work are as follows:

U - Indicates the compound or analyte was analyzed for and not detected above the minimum detectable activity (MDA) in the sample. The value reported is the sample result corrected for sample dilution and moisture content by the laboratory. The data is usable for decision making purposes

UJ - Indicates the compound or analyte was analyzed for and not detected at concentrations above the minimum detectable activity (MDA) in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate, but is usable for decision making purposes.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

Appendix 2

Summary of Data Qualification

RADIOCHEMISTRY DATA QUALIFICATION SUMMARY*

SDG: K1785	REVIEWER: ELR	Project: RCBRA	PAGE 1 OF 1
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Thorium-228 (aspec) Thorium-232 (aspec)	J	All	No LCS analysis
Tritium Carbon-14	J	All	No MS analysis

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Laboratory Narrative and Chain-of-Custody Documentation

1.0 GENERAL

Washington Closure Hanford (WCH) Sample Delivery Group K1785 was composed of nineteen solid (other solid) samples designated under SAF No. RC-118 with a Project Designation of: Columbia River Component of the RCBRA - Tissues.

The samples were received as stated on the Chain-of-Custody documents. Any discrepancies are noted on the Eberline Analytical Sample Receipt Checklist. The results were sent to WCH via e-mail November 10, 2009.

2.0 ANALYSIS NOTES

2.1 Carbon-14 Analysis

No problems were encountered during the course of the analyses.

2.2 Tritium Analysis

No problems were encountered during the course of the analyses.

2.3 Strontium-90 Analysis

The initial analysis of the QC Blank exhibited activity above the MDA. The outside of the planchet was cleaned with an antistatic wipe and recounted, yielding acceptable results. No other problems were encountered during the course of the analyses.

2.4 Technetium-99 Analysis

No problems were encountered during the course of the analyses.

2.5 Isotopic Thorium Analysis

No problems were encountered during the course of the analyses.

2.6 Isotopic Uranium Analysis

No problems were encountered during the course of the analyses.

2.7 Isotopic Plutonium Analysis

No problems were encountered during the course of the analyses.

2.8 Gamma Spectroscopy

No problems were encountered during the course of the analyses.

3.0 Case Narrative Certification Statement

"I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data obtained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

1.0 GENERAL

Washington Closure Hanford (WCH) Sample Delivery Group K1785 was composed of twenty solid (other solid) samples designated under SAF No. RC-118 with a Project Designation of: Columbia River Component of the RCBRA - Tissues.

The samples were received as stated on the Chain-of-Custody documents. Any discrepancies are noted on the Eberline Analytical Sample Receipt Checklist. The results were sent to WCH via e-mail November 12, 2009.

2.0 ANALYSIS NOTES

2.1 Carbon-14 Analysis

The carbon-14 recovery for the QC LCS was 75%, which is less than the control limit of 80%, but above the absolute limit of 60%. No other problems were encountered during the course of the analyses.

2.2 Tritium Analysis

No problems were encountered during the course of the analyses.

2.3 Strontium-90 Analysis

No other problems were encountered during the course of the analyses.

2.4 Technetium-99 Analysis

No problems were encountered during the course of the analyses.

2.5 Isotopic Thorium Analysis

The thorium-229 tracer yield for the initial analysis for sample J18XB7 was below acceptable limits. The plating supernate for the aliquot was passed through a 1X8 column and then replated onto the original low yield plate. The reworked planchet was recounted and resulted in an acceptable yield of 85%. No other problems were encountered during the course of the reanalyses.

2.6 Isotopic Uranium Analysis

No problems were encountered during the course of the analyses.

2.7 Isotopic Plutonium Analysis

No problems were encountered during the course of the analyses.

2.8 Gamma Spectroscopy

No problems were encountered during the course of the analyses.

3.0 Case Narrative Certification Statement

"I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. F.3.1.4 SDG K1839

SAF-RC-118
Columbia River Component of the RCBRA – Tissues
FINAL VALIDATION PACKAGE

COMPLETE COPY OF VALIDATION PACKAGE TO:

Kathy Wendt H4-21

COMMENTS:

SDG K1839 **SAF-RC-118**

Date: 4 March 2010
To: Washington Closure Hanford (technical representative)
From: LLR Consulting
Project: Columbia River Component of the RCBRA - Tissue
Subject: Inorganic - Data Package No. K1839-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1839 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Date
J18WW9	11/18/09	Solid	C	See note 1
J18WX0	11/18/09	Solid	C	See note 1
J190T7	11/18/09	Solid	C	See note 1

1 - ICP metals (6010B) & mercury by 7471A.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL 2008, Rev. 0, September 2008) Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

Holding Times

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 6 months for ICP metals and 28 days for mercury.

Due to the holding time being exceeded by greater than twice the limit, the mercury results in samples J18WW9, J18WX0, J190T7, J190T8, J1890T9, J196H2, J196H3, J196H7 and J196H8 were qualified as estimates and flagged "J".

All other holding times were acceptable.

Preparation (Method) Blanks

Preparation Blanks

At least one preparation blank, consisting of deionized distilled water processed through each sample preparation and analysis procedure, must be prepared and analyzed with every sample delivery group. In the case of positive blank results, samples with digestate concentrations less than five times the preparation blank value have had their associated values qualified as non-detected and flagged "UJ". Samples with concentrations of greater than five times the highest blank concentration do not require qualification.

In the case of negative blank results, if the absolute value exceeds the contract required detection limit (CRDL), all nondetects are rejected and flagged "UR" and all detects that are less than ten times the absolute value of the associated preparation blank result are qualified as estimates and flagged "J". If the absolute value of the negative preparation blank is greater than the instrument detection limit (IDL) and less than or equal to the CRDL, all nondetects are qualified as estimates and flagged "UJ" and all detects less than ten times the absolute value of the blank are qualified as estimates and flagged "J". If the sample results are greater than ten times the absolute value of the preparation blank, no qualification is necessary.

Due to method blank contamination, the tin results in samples J18WV4, J190V4, J190V3, J190R2, J190V2, J190R1, J18WX5, J18WW9, J18WX0, J190T7,

J190T8, J1890T9, J196H2, J196H3, J196H7 and J196H8 were qualified as estimates and flagged "UJ".

All other preparation blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

Due to a matrix spike recovery outside QC limits, the iron (69%), potassium (55%), tin (67%) and zinc (69%) results in samples J18WW9, J18WX0, J190T7, J190T8, J1890T9, J196H2, J196H3, J196H7 and J196H8 were qualified as estimates and flagged "J".

Due to a matrix spike recovery outside QC limits (149%), the mercury result in samples J18WV5, J18WX6, J18WV4, J18WX5, J190R1, J190V2, J190R2, J190V3, J190R3, J190V4, J196D7, J196D8, J196J2, J196J3, J196K8, J196K9, J196Y2 and J196Y1 were qualified as estimates and flagged "J".

Due to LCS recoveries outside QC limits, the silicon (56% & 56%) result in all samples were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

Due to RPDs outside QC limits, all calcium (63%), phosphorous (41%) and strontium (65%) results in samples J18WV5, J18WX6, J18WV4, J18WX5, J190R1, J190V2, J190R2, J190V3, J190R3, J190V4, J196D7, J196D8, J196J2, J196J3, J196K8, J196K9, J196Y2 and J196Y1 were qualified as estimates and flagged "J".

All other laboratory duplicate results were acceptable.

Field Duplicate

No field duplicates were submitted for analysis.

Analytical Detection Levels

Reported analytical detection levels are compared against the 100 and 300 Area RQLs to ensure that laboratory detection levels meet the required criteria. All undetected beryllium results exceeded the RQL. Under the WCH statement of work, no qualification is required. All other results met the RQL.

Completeness

Data package No. K1639 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to the holding time being exceeded by greater than twice the limit, the mercury results in samples J18WV4, J18WW9, J18WX0, J190T7, J190T8, J1890T9, J196H2, J196H3, J196H7 and J196H8 were qualified as estimates and flagged "J".
- Due to method blank contamination, the tin results in samples J190V4, J190V3, J190R2, J190V2, J190R1, J18WX5, J18WW9, J18WX0, J190T7, J190T8, J1890T9, J196H2, J196H3, J196H7 and J196H8 were qualified as

estimates and flagged "UJ".

- Due to a matrix spike recovery outside QC limits, the iron (69%), potassium (55%), tin (67%) and zinc (69%) results in samples J18WW9, J18WX0, J190T7, J190T8, J1890T9, J196H2, J196H3, J196H7 and J196H8 were qualified as estimates and flagged "J"

- Due to a matrix spike recovery outside QC limits (149%), the mercury result in samples J18WV5, J18WX6, J18WV4, J18WX5, J190R1, J190V2, J190R2, J190V3, J190R3, J190V4, J196D7, J196D8, J196J2, J196J3, J196K8, J196K9, J196Y2 and J196Y1 were qualified as estimates and flagged "J".

- Due to LCS recoveries outside QC limits, the silicon (56% & 56%) result in all samples were qualified as estimates and flagged "J".

- Due to RPDs outside QC limits, all calcium (63%), phosphorous (41%) and strontium (65%) results in samples J18WV5, J18WX6, J18WV4, J18WX5, J190R1, J190V2, J190R2, J190V3, J190R3, J190V4, J196D7, J196D8, J196J2, J196J3, J196K8, J196K9, J196Y2 and J196Y1 were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods

All undetected beryllium results exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Case Narrative

Client: WC HANFORD RC-118
LVL#: 0911072 K1839
SDG/SAF#: K/RC-118

W.O.#: 60049-001-001-0001-00
Date Received: 11-23-09

METALS

The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise.

1. This narrative covers the analyses of 18 fish samples
2. The samples were prepared and analyzed in accordance with methods listed on the data report forms The samples were reported on a wet weight, 'as-received' basis.
3. All analyses were performed within the required holding times.
4. Please refer to the Sample Receipt Check List for any sample discrepancies in LvLl's sample acceptance policy.
5. All Initial and Continuing Calibration Verifications (ICV/CCVs) were within the 90-110% control limits (80-120% for Mercury) with the exception Phosphorous in file ICP1124B. All samples were rerun and reported with 12-fold dilutions for Phosphorous in file ICP1125C due to sample matrix and/or high concentration.
6. All Initial and Continuing Calibration Blanks (ICB/CCBs) were within control limits (less than the LOQ).
7. All preparation/method blanks (MB) were within method criteria (less than the Limit of Quantitation (3-10X the LOD), or samples greater than 20X MB value).
8. All ICP Interference Check Standards were within control limits.
9. All Standard Reference Material (SRM) analytes were within the Prediction Interval control limits supplied by the manufacturer
10. The matrix spike (MS) recoveries for 3 analytes were outside the 75-125% control limits.

11 For analytes where the ICP MS is out-of-control, a post-digestion MS (PDS) and serial dilution are performed. A serial dilution is performed for Mercury. A PDS was prepared at meaningful concentration level for the following analytes

Sample ID	Element	PDS Concentration (ppb)	PDS % Recovery
J18WV5	Calcium	20,800	85.5
	Phosphorous	2,000	92.1

12. The duplicate analyses for 7 analytes were outside the 20% Relative Percent Difference (RPD) control limits.

13 For the purposes of this report, the data have been reported to the Limit of Detection (LOD). Values between the LOD and the Limit of Quantitation (LOQ) are acquired in a region of less-certain quantitation.

14 LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

15 I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

Iain Daniels

Case Narrative

Client: WC-HANFORD RC-118
LVL#: 1001022
SDG/SAF#: K1839/RC-118

W.O.#: 60049-001-001-0001-00
Date Received: 01-12-09

METALS

The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise.

1. This narrative covers the analyses of 9 fish samples.
2. The samples were prepared and analyzed in accordance with methods listed on the data report forms. The samples were reported on a wet weight, 'as-received' basis.
3. All analyses were performed within the required holding times.
4. Please refer to the Sample Receipt Check List for any sample discrepancies in LvLI's sample acceptance policy.
5. All Initial and Continuing Calibration Verifications (ICV/CCVs) were within the 90-110% control limits (80-120% for Mercury).
6. All Initial and Continuing Calibration Blanks (ICB/CCBs) were within control limits (less than the LOQ).
7. All preparation/method blanks (MB) were within method criteria (less than the Limit of Quantitation (3-10X the LOD), or samples greater than 20X MB value).
8. All ICP Interference Check Standards were within control limits.
9. All Standard Reference Material (SRM) analytes were within the Prediction Interval control limits supplied by the manufacturer.
10. The matrix spike (MS) recoveries for 6 analytes were outside the 75-125% control limits.

11. For analytes where the ICP MS is out-of-control, a post-digestion MS (PDS) and serial dilution are performed. A PDS was prepared at meaningful concentration level for the following analytes.

Sample ID	Element	PDS Concentration (ppb)	PDS % Recovery
J19238	Iron	2,000	112.9
	Phosphorous	4,000	98.2
	Potassium	12,000	121.3
	Sodium	12,000	120.5
	Tin	100	105.2
	Zinc	100	126.3

12. All duplicate analyses were within the 20% Relative Percent Difference (RPD) control limits. The ± 20% RPD control limit applies to sample results greater than ten times the MDL. The sample result for Copper was less than ten times the MDL.

13. For the purposes of this report, the data have been reported to the Limit of Detection (LOD). Values between the LOD and the Limit of Quantitation (LOQ) are acquired in a region of less-certain quantification.

14. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

15. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

LVLI Batch #: 0109L020
Sample Custodian:

NOTE: EXPLAIN ALL DISCREPANCIES

1. Samples Hand Delivered or Shipped? Carrier: Fed Ex Airbill # 7980 4242 7369

2. Custody Seals on coolers or shipping containers intact, signed & dated? ☑ Yes ☐ No ☐ No Seals

3. Outside of coolers or shipping containers are free from damage? ☑ Yes ☐ No Comments:

4. All expected paperwork received (coc & other client specific information) sealed in plastic bag and easily accessible? ☑ Yes ☐ No

5. Samples received cooled or ambient? Temp 3.3° °C Cooler # ECC-01-061

How was the temperature taken? ☑ IR ☐ Temp. Blank ☐ Other (Specify):

Is the Temp. Criteria met for these samples? (Hg in soils @ 4°C) ☑ Yes ☐ No

6. Custody seals on sample containers intact, signed and dated? ☑ Yes ☐ No ☐ No Seals

7. COC (Client & LVLI) signed & dated? ☑ Yes ☐ No

8. Sample containers are intact? ☑ Yes ☐ No

9. All samples on COC received? ☑ Yes ☐ No
All samples received on COC? ☑ Yes ☐ No

10. All sample label information matches COC? ☑ Yes ☐ No

11. Samples properly preserved? (If #5 is no, then this is no.) ☑ Yes ☐ No

12. Samples received within hold times? ~~☑ Yes~~ 9/7/01 ☑ No Outside of holdtime for mercury
Short holds taken to wet lab? ☐ Yes ☐ No ☑ N/A

13. VOA, TOC, TOX free of headspace? ☐ Yes ☐ No ☑ N/A

14. QC stickers placed on bottles designated by client? ☐ Yes ☐ No ☑ N/A

15. Shipment meets LVLI Sample Acceptance Policy? (Identify all bottles that do not meet the policy, which is on the reverse of this page.) ☑ Yes ☐ No

16. Project Manager contacted concerning any discrepancies? ☐ Yes ☑ No ☑ N/A

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1839 prepared by Eberline Services (EB). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Date
J18WW9	11/18/09	Solid	C	See note 1

1 - Tritium, carbon-14, total strontium, technetium-99, alpha spectroscopy and gamma spectroscopy

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008, Rev. 0, September 2006). Appendices 1 through 6 provide the following information as indicated below.

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY PARAMETERS

· Holding Times

Holding times are calculated from Chain-of-Custody forms to determine the validity of the results. The maximum holding time for radiochemical analysis is 6 months

All holding times were acceptable.

· Preparation (Method) Blanks

Laboratory Blanks

Blank samples are analyzed to determine if positive results are due to laboratory reagent, sample container, or detector contamination. If blank analysis results indicate the presence of an analyte above the minimum detectable activity (MDA), the following qualifiers are applied: All positive sample results less than five times the highest blank concentration are qualified as estimates and flagged "J"; sample results below the MDA are qualified as undetected and flagged "U"; sample results above the MDA and greater than five times the highest blank concentration are not qualified.

All blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

· Accuracy

Accuracy is evaluated from laboratory control sample (LCS) or blank spike sample (BSS) batch samples and spiked samples from the analytical batch. Measured activities are compared to the known added amounts. The acceptable LCS or BSS and matrix spike (MS) recovery range is 70-130%. In addition, samples may be spiked with a radiochemical tracer to assist in isolating the radioisotope of interest with the yield of 8/25/09the tracer being used in calculating sample activity. The acceptable range for tracer recovery is 20% to 105%. Spike sample results outside the above ranges result in associated sample results being qualified as estimates, or not qualified, depending on the activity of the individual sample. Results are rejected for LCS/BSS recoveries of less than 30% and tracer recoveries of less than 20%, and tracer recoveries of greater than 115% for detected results

Due to the lack of an LCS analysis, all thorium-228 (aspec) and thorium-232 (aspec) results were qualified as estimates and flagged "J".

Due to the lack of a matrix spike analysis, all tritium and carbon-14 results were qualified as estimates and flagged "J".

All other accuracy results were acceptable

- **Laboratory Duplicates**

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the contract required detection limit (CRDL) and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All duplicate results were acceptable.

Field Duplicates

No field duplicates were submitted for analysis.

- **Detection Levels**

Reported analytical detection levels for undetected analytes are compared against the RCBRA tissue RQLs to ensure that laboratory detection levels meet the required criteria. Seventy-two analytes exceeded the RQL. Under the WCH statement of work, no qualification is required. All other analytes met the RQL.

- **Completeness**

Data package No. K1839 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to the lack of an LCS analysis, all thorium-228 (aspec) and thorium 232 (aspec) results were qualified as estimates and flagged "J".
- Due to the lack of a matrix spike analysis, all tritium and carbon-14 results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Seventy-two analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH statement of work are as follows:

U - Indicates the compound or analyte was analyzed for and not detected above the minimum detectable activity (MDA) in the sample. The value reported is the sample result corrected for sample dilution and moisture content by the laboratory. The data is usable for decision making purposes

UJ Indicates the compound or analyte was analyzed for and not detected at concentrations above the minimum detectable activity (MDA) in the sample Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate, but is usable for decision making purposes.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

Appendix 2

Summary of Data Qualification

RADIOCHEMISTRY DATA QUALIFICATION SUMMARY*

SDG: K1839	**REVIEWER: ELR**	**Project: RCBRA**	**PAGE 1 OF 1**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Thorium-228 (aspec) Thorium-232 (aspec)	J	All	No LCS analysis
Tritium Carbon-14	J	All	No MS analysis

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Laboratory Narrative and Chain-of-Custody Documentation

1.0 GENERAL

Washington Closure Hanford (WCH) Sample Delivery Group K1839 was composed of 27 solid (other solid) samples designated under SAF No. RC-118 with a Project Designation of: Columbia River Component of the RCBRA Tissues. The 27 samples were segregated by sample type, this report contains the results for the 18 fillet/carcass samples. Results for the 9 liver/kidney samples are reported in FAC report R911090-7520.

The samples were received as stated on the Chain-of-Custody documents. Any discrepancies are noted on the Eberline Analytical Sample Receipt Checklist. The results were sent to WCH via e-mail December 15, 2009.

2.0 ANALYSIS NOTES

2.1 Carbon-14 Analysis

No problems were encountered during the course of the analyses.

2.2 Tritium Analysis

No problems were encountered during the course of the analyses.

2.3 Strontium-90 Analysis

No problems were encountered during the course of the analyses.

2.4 Technetium-99 Analysis

No problems were encountered during the course of the analyses.

2.5 Isotopic Thorium Analysis

No problems were encountered during the course of the analyses.

2.6 Isotopic Uranium Analysis

Chemistry for the samples was started and finished as a single batch however the final electrodesposition onto stainless steel discs was performed over two successive days, as indicated by the prep dates. No problems were encountered during the course of the analyses.

2.7 Isotopic Plutonium Analysis

The initial yield for sample J196D7 was 20%; the sample was replated from the original plating solution and recounted. The yield was improved to 26% and is reported. Chemistry for the samples was started and finished as a single batch however the final electrodesposition onto stainless steel discs was performed over two successive days, as indicated by the prep dates. No other problems were encountered during the course of the analyses.

2.8 Gamma Spectroscopy

No problems were encountered during the course of the analyses.

3.0 Case Narrative Certification Statement

"I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data obtained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

N. Joseph Verville

Case Narrative

1.0 GENERAL

Washington Closure Hanford (WCH) Sample Delivery Group K1839 was composed of 27 solid (other solid) samples designated under SAF No. RC-118 with a Project Designation of: Columbia River Component of the RCBRA – tissues. The 27 samples were segregated by sample type; this report contains the results for the nine liver/kidney samples. Results for the 18 fillet/carcass samples are reported in EAC report R911090-7519.

The samples were received as stated on the Chain-of-Custody documents. Any discrepancies are noted on the Eberline Analytical Sample Receipt Checklist. The results were sent to WCH via e-mail December 15, 2009.

2.0 ANALYSIS NOTES

2.1 Carbon-14 Analysis

No problems were encountered during the course of the analyses.

2.2 Tritium Analysis

No problems were encountered during the course of the analyses.

2.3 Strontium-90 Analysis

No problems were encountered during the course of the analyses.

2.4 Technetium-99 Analysis

No problems were encountered during the course of the analyses

2.5 Isotopic Thorium Analysis

No problems were encountered during the course of the analyses.

2.6 Isotopic Uranium Analysis

No problems were encountered during the course of the analyses.

2.7 Isotopic Plutonium Analysis

No problems were encountered during the course of the analyses.

2.8 Gamma Spectroscopy

No problems were encountered during the course of the analyses.

3.0 Case Narrative Certification Statement

"I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data obtained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

N. Joseph Verville
Client Services Manager

Solid

1. Completeness .... ☐ N/A

Technical verification forms present?.. Yes [✓ No] N/A

Comments: ____

2. Initial Calibration (Levels D, E) .... ☒ N/A

Instruments/detectors calibrated?.. Yes No N/A

Initial calibration acceptable? .... Yes No N/A

Standards NIST traceable?... Yes No N/A

Standards Expired? .... Yes No N/A

Calculation check acceptable? .... Yes No N/A

Comments: ____

3. Continuing Calibration (Levels D, E) ☒ N/A

Calibration checked within required frequency? .... Yes No N/A

Calibration check acceptable? .... Yes No N/A

Calibration check standards traceable? .... Yes No N/A

Calibration check standards expired? .... Yes No N/A

Calculation check acceptable? .... Yes No N/A

Comments:

4. Background Counts (Levels D, E) .... ☒ N/A

Background Counts checked within required frequency? .... Yes No N/A

Background Counts acceptable? .... Yes No N/A

Calculation check acceptable? .... Yes No N/A

Comments.

5. Blanks (Levels B, C, D, E) ☐ N/A

Method blank analyzed within required frequency? [✓ Yes] No N/A

Method blank results acceptable? [✓ Yes] No N/A

Analytes detected in method blank? Yes [✓ No] N/A

Field blank(s) analyzed? Yes [✓ No] N/A

Field blank results acceptable? Yes No [✓ N/A]

Analytes detected in field blank(s)? Yes No [✓ N/A]

Transcription/Calculation Errors? (Levels D, E) Yes No [✓ N/A]

Comments: 7 over RQL -

6. Laboratory Control Samples or Blank Spike Samples (Levels C, D, E) ☐ N/A

LCS /BSS analyzed within required frequency? [✓ Yes] No N/A

LCS/BSS recoveries acceptable? [✓ Yes] No N/A

LCS/BSS traceable? (Levels D,E) Yes No [✓ N/A]

LCS/BSS expired? (Levels D,E) Yes No [✓ N/A]

LCS/BSS levels correct? (Levels D,E) Yes No [✓ N/A]

Transcription/Calculation Errors? (Levels D, E) Yes No [✓ N/A]

Comments: no Pu 238 or 232 LCS – [illegible]

7. Chemical Carrier Recovery (Levels C, D, E) ☒ N/A

Chemical carrier added? Yes No N/A

Chemical recovery acceptable? Yes No N/A

Chemical carrier traceable? (Levels D, E) Yes No N/A

Chemical carrier expired? (Levels D, E) .... Yes No N/A

Transcription/Calculation errors? (Levels D, E) .... Yes No N/A

Comments:

8. Tracer Recovery (Levels C, D, E) .... ☐ N/A

Tracer added? .... [✓ Yes] No N/A

Tracer recovery acceptable? .... [✓ Yes] No N/A

Tracer traceable? (Levels D, E) .... Yes No [✓ N/A]

Tracer expired? (Levels D, E) .... Yes No [✓ N/A]

Transcription/Calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments:

9. Matrix Spikes (Levels C, D, E) .... ☐ N/A

Matrix spike analyzed? .... Yes [✓ No] N/A

Spike recoveries acceptable? .... Yes No [✓ N/A]

Spike source traceable? (Levels D, E) .... Yes No [✓ N/A]

Spike source expired? Levels D, E) .... Yes No [✓ N/A]

Transcription/Calculation Errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: No MS - 3H + C-14 - I all

10. Duplicates (Levels C, D, E) ☐ N/A

Duplicates Analyzed at required frequency? [✓ Yes] No N/A

RPD Values Acceptable? [✓ Yes] No N/A

Transcription/Calculation Errors? (Levels D, E) Yes No [✓ N/A]

Comments:

11. Field QC Samples (Levels C, D E) ☐ N/A

Field duplicate sample(s) analyzed? Yes [✓ No] N/A

Field duplicate RPD values acceptable? Yes No [✓ N/A]

Field split sample(s) analyzed? Yes [✓ No] N/A

Field split RPD values acceptable? Yes No [✓ N/A]

Performance audit sample(s) analyzed? Yes [✓ No] N/A

Performance audit sample results acceptable? Yes No [✓ N/A]

Comments: no field QC

12. Holding Times (All levels)

Are sample holding times acceptable? [✓ Yes] No N/A

Comments:

13 Results and Detection Limits (All Levels).. ☐ N/A

Results reported for all required sample analyses?... [✓ Yes] No N/A

Results supported in raw data?(Levels D, E).. Yes No [✓ N/A]

Results Acceptable? (Levels D, E).. Yes No [✓ N/A]

Transcription/Calculation errors? (Levels D, E)... Yes No [✓ N/A]

MDA's meet required detection limits?... Yes [✓ No] N/A

Transcription/calculation errors? (Levels D, E).. Yes No [✓ N/A]

Comments: 72 out

MEMORANDUM

TO: Karl Kasper
FROM: David Dinsmore
DATE: April 27, 2010
RE: AMEC Earth & Environmental Validation Review

Data validation of the results associated with the fish tissue analyses for PCB congeners using Method 1668A, inorganic arsenic using Method 1632A, hexavalent chromium using Method 6800 and methyl mercury using Method 1630 was recently performed by AMEC Earth & Environmental of Portland, OR. In addition to the fish tissue analyses, surface water, sediment, and soil data were also evaluated. Criteria contained in the *Region 10 Standard Operating Procedure for the Validation of Method 1668 Toxic, Dioxin-Like, PCB Data* (EPA, 1995) and method specific guidelines from EPA Methods 1668B, 1632A, 6800 and 1630 were primarily used in the validation process. When criteria in these references were not available, the *United States Department of Energy (DOE) Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River, Appendix A, Sampling and Analysis Plan (SAP)* (DOE, 2008) was used as guidance. The report containing the validation results, *Data Validation Report for the Woodard & Curran Hanford Samples,* was originally issued on March 12, 2010. A revised report was subsequently prepared and submitted later on April 12, 2010. Qualifiers were applied to the data during validation to indicate estimated or rejected concentrations based on non-compliant quality control parameter results. The purpose of this memorandum is to summarize the findings contained in the validation report, identify rejected results and to evaluate the overall usability of the data. The results are discussed by chemical parameter in the following sections.

PCB Congeners

For the PCB congener analyses, qualifiers were applied to at least one congener of the 209 included in the analyses for each of the 27 fish tissue, surface water, sediment and soil samples that were validated. The majority of the qualifiers applied to the data were due to minor deficiencies resulting in concentrations being considered estimated. However, non-detect results for the congener PCB 3 were qualified as rejected, and therefore unusable, for five fish tissue samples including J19037, J19276, J19289, J19464 and J18K87. The samples were rejected due to the low recoveries of internal standards.

All of the samples were extracted and/or analyzed prior to expiration of the method-specified holding time limit of one year. In the professional opinion of the data validators at AMEC, since the samples were stored at temperatures below -10 degrees centigrade, there was no impact on data usability from this delay.

Congeners reported as positive results in several samples were qualified as non-detect (U) based on blank detections. These samples included J18K87, J18K69, J19276, J19289, J19300, J19037, J19464, J19075, J190F3, J194C5, J19625, J18XD8, J19749, J19750, J19242, J18WY1, J196Y6, J19227, J191T2, J17T02, J17RY8, J18689, J18694, J17W23, J18692, J18HW9 and J18HW7.

As described in the first paragraph of this section, due to low recoveries of carbon-labeled isotopes below 10%, several non-detect sample results of PCB 3 were qualified as rejected. Other non-compliant recoveries outside of the Region 10 specifications of 25 – 200% resulted in sample results being qualified as estimated. The majority of these recoveries were below the lower control limit indicating a potential low bias to sample concentrations.

Several positive congener results were qualified as non-detect (U) at specified detection limits due to non-compliant ion abundance ratio criteria. These are low concentrations with a signal to noise ratio that is insufficient to adequately determine that a congener was absent at a particular concentration.

The data validation results identified a few rejected PCB results associated with the fish tissue analyses due to major quality control deficiencies. However, the majority of the results are generally acceptable to characterize concentrations of the PCB congeners in these samples.

Inorganic Arsenic

The validation of the inorganic arsenic results did not reveal any major quality control deficiencies. Inorganic arsenic was not detected in any blanks. Matrix spike results were compliant indicating that there was not likely any interference from the matrix that would impact reported concentrations. The recoveries of the standard reference material used to assess analytical accuracy were below the lower control limit indicating a potential low bias. Several fish tissue sample concentrations were qualified as estimated based on this finding. Duplicate results had acceptable relative percent differences (RPDs) indicating that the amount of variability within the fish matrix was limited. Laboratory control sample recoveries were also compliant providing additional supporting evidence that the analytical accuracy was acceptable. There were no sample data rejected based on the quality control results, indicating that the inorganic arsenic data are acceptable for the purposes of making project –related decisions.

Hexavalent Chromium

The majority of the quality control sample results from the validation procedure associated with the hexavalent chromium analyses were in compliance. Hexavalent chromium concentrations were not detected in any of the associated laboratory blanks. Laboratory control sample results were compliant suggesting that the accuracy of the analyses was acceptable. Matrix spike analysis was performed to identify potential interferences that may be inherent in the matrix. The matrix spike recovery of hexavalent chromium was slightly below the lower control limit indicating a potential low bias. One fish tissue sample, J193L2, which did not have a detection of hexavalent chromium, was qualified as estimated (0.127 µg/g UJ wet weight) based on these results. There were no rejected results for any of the samples. The findings from the validation of the hexavalent chromium analyses were generally compliant indicating that the data are acceptable for the intended project end uses.

Methyl Mercury

All of the quality control results, including holding times, method blanks, matrix spikes, and laboratory control samples had compliant results. There were no qualifiers applied to any samples associated with the methyl mercury analyses. The methyl mercury data the data are acceptable for the intended project end uses.

Summary

The validation results provided by AMEC were used to evaluate the quality of the data for a subset of fish tissue, surface water, sediment and soil samples. Samples were analyzed for PCB congeners, inorganic arsenic, hexavalent chromium, and methyl mercury. Five sample results of PCB 3 were qualified as rejected based on low internal standard recoveries. Other PCB congener results were determined to be acceptable for project uses although some included limitations since the data for several samples were qualified as estimated due to non-compliant quality control results. None of the samples analyzed for inorganic arsenic, hexavalent chromium and methyl mercury had any major deficiencies and, based on this assessment, none of the associated data were rejected. The review of the data validation results indicated that the majority of the results in the data set are suitable for project uses and that only a limited amount were identified as unusable.

1.0 INTRODUCTION

Fish tissue samples were submitted to TestAmerica Laboratories, Inc. (TA), located in Knoxville, Tennessee, where they were analyzed for polychlorinated biphenyls (PCBs) by United States Environmental Protection Agency (EPA) Method 1668A. A list of tissue samples undergoing validation by species, tissue type, location, sample identification (ID), TA sample delivery group (SDG), TA sample ID is presented below in Table 1. A list of surface water, sediment, and soil samples is presented in Table 2.

Table 1: Tissue Samples Undergoing Data Validation at TA

Species	Tissue Type	Location	Sample ID	TA SDG	TA Laboratory ID
Bass	Fillet	Upriver	J19037	J00564	H9H280167-001
Bass	Fillet	100 Area	J19075	J00568	H9I090171-004
Sucker	Carcass	Lake Wallula	J19227	J00643	H9L080482-004
Carp	Fillet	Upriver	J19242	J00623	H9J280148-004
Sturgeon	Fillet	100/300/Wallula	J19276	J00558	H9H060299-004
Carp	Fillet	100 Area	J19289	J00558	H9H060299-009
Sturgeon	Fillet	100/300/Wallula	J19300	J00559	H9H140183-008
Sturgeon	Liver	100/300/Wallula	J19464	J00564	H9H280167-017
Sturgeon	Carcass	Wanapum	J19625	J00581	H9I240133-005
Walleye	Fillet	100 Area	J19749	J00588	H9I300196-015
Walleye	Carcass	100 Area	J19750	J00588	H9I300196-016
Whitefish	Carcass	300 Area	J18K69	J00486	H9D280182-003
Whitefish	Fillet	Lake Wallula	J18K87	J00469	H9D210156-007

Walleye	Fillet	300 Area	J18XD8	J00588	H9I300196-013
Bass	Carcass	100 Area	J190F3	J00568	H9I090171-010
Sucker	Fillet	300 Area	J191T2	J00643	H9L080482-017
Sturgeon	Carcass	100/300/Wallula	J194C5	J00569	H9I110162-014
Carp	Carcass	Lake Wallula	J196Y6	J00641	H9K210408-007

Table 2: Surface Water, Sediment, and Soil Samples Undergoing Data Validation at TA

Sample Type	Sample ID	TA SDG	TA Laboratory ID
Surface Water	J17T02	J00255	H8K190297-003
Surface Water	J17RY8	J00255	H8K190297-004
Sediment	J18689	J00364	H9C040205-002
Sediment	J18694	J00364	H9C040205-009
Sediment	J17W23	J00367	H9C050298-001
Sediment	J18692	J00367	H9C050298-005
Soil	J18HW9	J00419	H9C260271-005
Soil	J18HW7	J00419	H9C260271-003

Fish tissue samples were also submitted to Pacific Northwest National Laboratory (Pacific NW), located in Sequim, Washington, where they were analyzed for inorganic arsenic by EPA SW-846 Method 1632A, hexavalent chromium by EPA SW-846 Method 6800, and methyl mercury by EPA SW-846 Method 1630M. A list of tissue samples undergoing validation by species, analyte, tissue type, location, sample ID, and Pacific NW SDG is presented below in Table 3.

Table 3: Tissue Samples Undergoing Data Validation at Pacific NW

Species	Analyte	Tissue Type	Location	Sample ID	Pacific NW SDG
Bass	Arsenic	carcass	Upriver	J19062	SEQ082809

2.0 DATA VALIDATION METHODOLOGY

AMEC Earth & Environmental, Inc. (AMEC) validated these data following the EPA Region 10 standard operating procedure (SOP) for the Validation of Method 1668 Toxic, Dioxin-Like, PCB Data (EPA, 1995), EPA Method 1668B (EPA, 2008), EPA Method 1632A (EPA, 2001a), EPA Method 6800 (EPA, 2007), and EPA Method 1630 (EPA, 2001b) Quality Control (QC) requirements, and the United States Department of Energy (DOE) Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River, Appendix A, Sampling and Analysis Plan (SAP) (DOE, 2008).

It is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but reported values may potentially contain error.

3.0 DEFINITIONS OF QUALIFIERS THAT MAY BE ADDED DURING DATA VALIDATION

- The **U** qualifier indicates that the associated analyte is considered not detected at or greater than the concentration listed. U qualifiers added during validation are typically a result of detection of target analytes in laboratory or rinsate blanks.
- The **J** qualifier indicates that the associated result is quantitatively uncertain. J qualifiers added during validation may indicate a concentration between the method detection limit (MDL) and the reporting limit (RL), or a data limitation related to a QC element that exceeds required limits.
- The **UJ** qualifier indicates that the associated analyte is considered not detected at or greater than the estimated concentration listed. UJ qualifiers added during validation may indicate either a high or low bias related to a QC element that exceeds required limits.
- The **N** qualifier indicates an analyte is tentatively identified. Tentative identification means that a chromatographic peak was detected at the correct retention time for an analyte, but that not all required identification criteria were met. The associated result is both qualitatively and quantitatively uncertain.
- The **NJ** qualifier indicates that an analyte is tentatively identified and the associated numerical value represents an approximate concentration.
- The **R** qualifier indicates that a result has been rejected due to serious QC problems. It is not possible to definitively determine whether the analyte is present or absent in the sample.

4.0 DEFINITIONS OF QUALIFICATION RATIONALE ABBREVIATIONS USED IN THIS REPORT

AS	Labeled injection internal standard (LIIS) recoveries were outside the EPA Region 10-recommended 25% to 200% limits for unqualified data.
BC	The initial calibration (ICAL) did not meet method-specified QC criteria.
DL	The analyte was detected at a concentration between the MDL and RL.
EM	The analyte did not meet all method-specified identification criteria.
IC	Low standard reference material (SRM) recovery.
LI	Low internal standard (IS) recovery. Analytical results may be biased.

LM Low matrix spike recovery.

MB The analyte was detected in the sample at a concentration less than five times the concentration detected in the associated laboratory blank.

MI There is chromatographic evidence of matrix interference.

RT Sample receipt temperature was higher than the SAP-specified target temperature.

5.0 CHAIN OF CUSTODY AND SAMPLE RECEIPT CONDITION DOCUMENTATION

Samples were received intact and with acceptable chain of custody (COC) documentation, except as described below:

- Sample times and dates were not listed on the COCs for the samples associated with SDG J00469, except for sample J18K83, which had a sample date and time listed on its COC. According to the laboratory's sample receipt documentation, the samples' dates and times were identified on the sample labels.
- The sample collection date from the COC, of July 3, 2009, did not match the collection date listed on the label, of July 30, 2009, for sample J19289. The other samples in this SDG were collected between July 28, 2009 and August 4, 2009, and the sampler's signature on the COC is dated July 30, 2009. The laboratory logged in the sample per the sample label, and in AMEC's professional opinion, data usability is not adversely affected.
- According to the sample receipt documentation, sample J18WWO was dropped on the counter in the laboratory and the jar's lid cracked. The sample was not compromised, the lid was replaced, and data usability is not adversely affected.
- According to the sample receipt documentation, the samples in SDG J00367 were received by the laboratory at the elevated temperature of 14 degrees Celsius (°C), exceeding the SAP-specified 4°C target temperature. PCBs are thermally stable and not subject to rapid biodegradation, and it is highly unlikely that the samples degraded at the elevated temperature. In compliance with EPA Region 10 validation guidelines, AMEC J qualified detected results and UJ qualified nondetected results from samples in this SDG. (**J**/**UJ**-RT).
- According to the sample receipt documentation, the samples in SDG J00419 were received by the laboratory at the elevated temperature of 8°C, exceeding the SAP-specified 4°C target temperature. PCBs are thermally stable and not subject to rapid biodegradation, and it is highly unlikely that the samples degraded at the

elevated temperature. In compliance with EPA Region 10 validation guidelines, AMEC J qualified detected results and UJ qualified nondetected results from samples in this SDG. (**J**/**UJ**-RT).

6.0 POLYCHLORINATED BIPHENYL CONGENERS BY EPA METHOD 1668A

Qualifiers added to the data during PCB validation are presented in Table 4, qualifier definitions are provided in Section 3.0, and qualification rationale abbreviations are provided in Section 4.0.

6.1 Holding Time

The project sampling and analysis plan (SAP) specifies a maximum holding time of 14 days from sample collection until extraction and 40 days maximum from extraction until analysis. However, EPA Method 1668B specifies a maximum holding time of one year from sample collection until extraction and a maximum of one year from extraction until analysis if solid, semi-solid, multi-phase, and tissue samples and extracts are stored at a temperature less than -10°C. Similarly, aqueous samples may be stored up to a year if they are stored in the dark at a temperature less than 6°C.

None of the samples were extracted within the SAP-specified maximum holding times, of 14 days for solids and 7 days for aqueous samples, from sample collection until extraction. However; all samples were extracted within the EPA-recommended maximum holding time of one year from sample collection until extraction, and in AMEC's professional opinion, data usability is not adversely affected.

6.2 GC/MS Performance Checks and Initial Calibration

TA performed an initial five-point calibration on June 24, 2008. Data limitations associated with this ICAL are summarized below:

- Ion abundance ratios were outside method-specified QC limits for PCB 9, PCB 10, PCB 24, PCB 34, PCB 46, PCB 56, PCB 63, PCB 68, PCB 78, PCB 79, PCB 80, PCB 89, PCB 103, PCB 106, PCB 111, PCB 134/143, PCB 137, PCB 139/140, PCB 141, PCB 144, PCB 145, PCB 148, PCB 150, PCB 174, PCB 181, PCB 182, PCB 190, PCB 192, PCB 194, and PCB 203 in the 0.5 nanograms per milliliter (ng/mL) calibration level. AMEC J qualified all detected solid results less than 0.01 nanograms per gram (ng/g) and aqueous results less than 0.02 nanograms per liter (ng/L), which correspond to the lowest calibration level where ion abundance ratios for these analytes were within method-specified limits for unqualified data. AMEC adjusted these concentrations on a sample-specific basis to correct for varying sample weights, sample volumes, and dilution factors. AMEC also UJ qualified all nondetected results for the affected analytes because the technical ICAL criteria were not met, possibly indicating that the laboratory detection limits have been established at too low a level to allow unambiguous qualitative evaluation of constituent identification. (**J**/**UJ**-BC)

- Ion abundance ratios for PCB 79, PCB 84, PCB 92, PCB 93/100, PCB 98/102, PCB 112, PCB 137, PCB 145, PCB 148, PCB 154, PCB 161, PCB 170, PCB 175, PCB 178, PCB 181, PCB 190, PCB 194, PCB 196, PCB 199, and PCB 200 were also outside method-specified QC limits for unqualified data in the 1.0 ng/mL calibration level. AMEC J qualified all detected solid results less than 0.05 ng/g and aqueous results less than 0.1 ng/L, which correspond to the lowest calibration level where ion abundance ratios for all analytes were within method-specified limits for unqualified data. AMEC adjusted these concentrations on a sample-specific basis to correct for varying sample weights, sample volumes, and dilution factors. AMEC also UJ qualified all nondetected results for the affected analytes because the technical ICAL criteria were not met, possibly indicating that the laboratory detection limits have been established at too low a level to allow unambiguous qualitative evaluation of constituent identification. (**J**/**UJ**-BC)
- TA eliminated the 2,000 ng/mL calibration point for PCB 3 because of a high ion abundance ratio. There were sufficient data points for an acceptable curve, and no PCB 3 detections were at concentrations greater than 4.0 ng/g, which corresponds to the highest valid calibration point for PCB 3. In AMEC's professional opinion, data usability is not adversely affected.

6.3 Calibration Verification

All compounds in the calibration verification standards met method-specified limits for unqualified data for percent difference (%D) and ion abundance ratios. It should be noted that standards data were not provided in SDGs J00364, J00367, and J00419, and AMEC was unable to check calibration verification standards for these SDGs.

6.4 Laboratory Blanks

Detections in the laboratory blanks associated with the analysis of these samples and results qualified because of those detections are summarized below. It should be noted that when the blank detection was an estimated maximum possible concentration (EMPC), AMEC only U qualified EMPC detections in the associated samples based on that blank detection. When the blank detection was not an EMPC, AMEC U qualified both EMPC data and non-EMPC data in the associated samples based on the blank detection.

Table 5a: Analyte Detections in the Laboratory Blank associated with Sample J18K87

Detected Analyte	Detected Concentration (ng/g)	U Qualify Detections Less Than: (5x Rule, corrected for the sample's 1:5 dilution) (ng/g)	U Qualified Results from Sample J18K87 (ng/g) (**U**-MB)

PCB 11	0.0024 EMPC	0.060 EMPC	0.011

6.5 Recovery of C-13 Labeled Isotope Dilution Standards Used as Internal Standards

EPA Method 1668A uses an isotope dilution procedure for calculation of analyte concentrations. A total of 39 carbon labeled PCB isomers are added to the sample or extract to monitor different aspects of the procedure, with 27 used as ISs for calculation of analytical results. IS recovery problems affect all analytical results that are calculated using the affected IS, not just the corresponding non-labeled isomer.

Recovery and performance of carbon labeled isotope dilution standards, used as ISs in field and QC samples, outside the method-specified limits for unqualified data are summarized below:

- Recoveries of the IS $^{13}C_{12}$-PCB 3 were extremely low in samples J18K87 (2.8%), J19037 (4.2%), J19276 (8.9%), J19289 (5.8%), and J19464 (5.0%). AMEC R qualified and rejected the nondetected PCB 3 results from these samples because of possible low bias in the analytical results. (**R**-LI)
- IS recoveries were low, ranging between 4.1% and 9.4%, in the ongoing precision and recovery (OPR) sample associated with the analysis of sample J19300. Target analyte recoveries were acceptable, and the low IS recoveries were isolated to the OPR. In AMEC's professional opinion, data usability is not adversely affected.

6.6 Labeled Injection Internal Standards

The LIISs $^{13}C_{12}$-PCB 9, $^{13}C_{12}$-PCB 31, $^{13}C_{12}$-PCB 32, $^{13}C_{12}$-PCB 52, $^{13}C_{12}$-PCB 101, $^{13}C_{12}$-PCB 127, $^{13}C_{12}$-PCB 138, $^{13}C_{12}$-PCB 180, and $^{13}C_{12}$-PCB 194 are added to sample extracts and standards before injection into the gas chromatograph/mass spectrometer (GC/MS). The LIISs are used to determine the recovery efficiency of the extraction and cleanup procedures, to determine if the GC/MS sensitivity and response are stable during the analytical run, and to determine if the same amount of extract was injected into the GC/MS (EPA, 1995).

LIIS area counts in the field samples outside the EPA Region 10 specifications, of 25% to 200% of initial area counts, for unqualified data are summarized below:

- Recoveries of the LIISs $^{13}C_{12}$-PCB 9 (24%), $^{13}C_{12}$-PCB 31 (16%), $^{13}C_{12}$-PCB 52 (19%), $^{13}C_{12}$-PCB 101 (24%), $^{13}C_{12}$-PCB 127 (16%), $^{13}C_{12}$-PCB 138 (18%), $^{13}C_{12}$-PCB 180 (20%), and $^{13}C_{12}$-PCB 194 (20%) were low in sample J18K87. AMEC J qualified all detected analytes and UJ qualified all nondetected analytes in this sample because of possible bias in the analytical results. (**J**/**UJ**-AS)
- Recoveries of the LIISs $^{13}C_{12}$-PCB 31 (22%), $^{13}C_{12}$-PCB 127 (22%), $^{13}C_{12}$-PCB 138 (24%), and $^{13}C_{12}$-PCB 194 (22%) were low in sample J19289. AMEC J qualified all detected analytes and UJ qualified all nondetected analytes in this sample because of possible bias in the analytical results. (**J**/**UJ**-AS)

- Recovery of the LIIS $^{13}C_{12}$-PCB 194 was low at 19% in sample J190F3. AMEC J qualified detected results and UJ qualified nondetected results for the heptachlorobiphenyls (PCB 170 to PCB 193), octachlorobiphenyls (PCB 194 to PCB 205), nonachlorobiphenyls (PCB 206 to PCB 208), and decachlorobiphenyl (PCB 209) in this sample because of possible bias in the analytical results. (**J**/**UJ**-AS)
- Recovery of the LIIS $^{13}C_{12}$-PCB 194 was low at 23% in sample J194C5. AMEC J qualified detected results and UJ qualified nondetected results for the heptachlorobiphenyls, octachlorobiphenyls, nonachlorobiphenyls, and decachlorobiphenyl in this sample because of possible bias in the analytical results. (**J**/**UJ**-AS)
- Recoveries of the LIISs $^{13}C_{12}$-PCB 101 and $^{13}C_{12}$-PCB 180 were low at 24% and 22%, respectively, in sample J19750. Specific limitations are summarized below:
    - $^{13}C_{12}$-PCB 101 is used to quantify $^{13}C_{12}$-PCB 104 only. $^{13}C_{12}$-PCB 104 is used to calculate pentachlorobiphenyls (PCB 82 to PCB 127), but AMEC chose to UJ qualify the nondetected PCB 104 result only. There are four other ISs used to quantify pentachlorobiphenyls, and in AMEC's professional opinion, data usability is not adversely affected. (**UJ**-AS)
    - AMEC J qualified the detected heptachlorobiphenyls and UJ qualified the nondetected heptachlorobiphenyls because of possible bias in the analytical results. (**J**/**UJ**-AS)
- Recoveries of the LIISs $^{13}C_{12}$-PCB 31 (24%), $^{13}C_{12}$-PCB 127 (21%), and $^{13}C_{12}$-PCB 194 (24%) were low in sample J18WY1. AMEC J qualified detected results and UJ qualified nondetected results for trichlorobiphenyls (PCB 16 to PCB 39), pentachlorobiphenyls, heptachlorobiphenyls, octachlorobiphenyls, nonachlorobiphenyls, and decachlorobiphenyl in this sample because of possible bias in the analytical results. (**J**/**UJ**-AS)
- Recoveries of the LIISs $^{13}C_{12}$-PCB 31 (22%), $^{13}C_{12}$-PCB 127 (23%), and $^{13}C_{12}$-PCB 138 (24%) were low in sample J17W23. AMEC J qualified detected results and UJ qualified nondetected results for trichlorobiphenyls, pentachlorobiphenyls, and hexachlorobiphenyls (PCB 128 to PCB 169) in this sample because of possible bias in the analytical results.

6.7 Surrogate Recovery

TA includes additional labeled isomers beyond those used as internal standards in the spiking solution added to samples and the additional isomers can be used in a manner analogous to surrogate compounds in order to monitor extraction and cleanup efficiency. Qualification of data based on recovery of these isomers is more straightforward than qualification based on internal standards. When recovery of one of these isomers falls outside QC limits, only the result from the corresponding non-labeled isomer is qualified.

Cleanup standard recoveries were within the method-specified 30% to 135% QC limits for unqualified data in all field samples.

6.8 Ongoing Precision and Recovery Samples

Analyte recoveries in the PCB OPR samples associated with these samples were within SAP-specified 50% to 150% limits for unqualified data.

6.9 Data Reporting

TA applied a number of qualifiers to data from the PCB analyses in order to describe analytical issues. Definitions of these laboratory qualifiers, resulting validation qualifiers, and a discussion of effect on data usability are presented below.

- TA B qualified data when the associated analytes were detected in the method blank. AMEC did not U qualify data based on TA' B qualifiers unless the analyte concentrations in the sample were less than 5 times the concentration detected in the blank.
- TA C qualified data when there was evidence of coelution. AMEC grouped coeluting congeners together for reporting purposes.
- TA J qualified data when the detected analyte concentration was less than the instrument's lowest calibration level. All of TA' J qualifiers are appropriate and have been applied to the final data. (**J**-DL)
- TA S qualified the detected PCB 6 and PCB 8 results from sample J19227 and the PCB 8 result from sample J191T2 because of ion suppression due to matrix interference. AMEC J qualified these results because of possibly low analytical bias. (**J**-MI)
- TA Q qualified data when a peak was detected and the ion abundance ratio did not meet method-specified acceptance criteria. AMEC U qualified all of TA' Q qualified results, unless previously U qualified because of analyte detections in the associated laboratory blank (Section 6.4), because the peaks did not meet the method-specified identification criteria. According to Section 16.6 of EPA Method 1668B (EPA, 2008):

  > ***"if the criteria for identification in Sections 16.1 - 16.5*** (signals for the two method-specified mass/charge ratios must be present and maximize within the same two scans, the signal to noise ratio must be greater than or equal to 2.5,

> the ratio of the integrated areas of the two mass/charge ratios must be within method-specified limits, relative retention times must be within method-specified limits, and an experienced spectrometrist must determine the absence or presence of the congener when identification is ambiguous) ***are not met, the PCB has not been identified and the result for that congener may not be reported or used for permitting or regulatory compliance purposes***."

Data that do not meet these mandatory identification criteria have been flagged with a **U**-EM qualifier to indicate that the congener is to be considered nondetected at the defined concentration. A summary of TA's EMPC PCB data is presented below in Table 5.

Table 6: EMPC PCB Data

7.0 INORGANIC ARSENIC BY EPA SW-846 METHOD 1632A

The inorganic arsenic data from these samples may be considered usable with the limitations and exceptions described in Sections 7.1 through 7.7. AMEC did not validate the organic arsenic results associated with these samples because the laboratory was only contracted to analyze for inorganic arsenic. Organic species were included purely for the client's information. Qualifiers added to the data during inorganic arsenic validation are presented in Table 7, qualifier definitions are provided in Section 3.0, and qualification rationale abbreviations are provided in Section 4.0.

Table 7: Summary of Data Qualifiers for Inorganic Arsenic

Sample ID	Inorganic Arsenic
J196F7	**UJ**-IC
J196L9	**UJ**-IC
J196K2	**J**-IC
J19702	**J**-IC
J18WW4	**J**-IC
J19700	**J**-IC
J19692	**J**-IC
J196D0	**J**-IC
J196D1	**J**-IC
J19693	**J**-IC
J196D2	**J**-IC

7.1 Holding Times

The laboratory-specified holding time for tissue samples stored between 6 ºC and -18 ºC is 28 days. The method-specified holding time for tissue samples frozen below -18 ºC is 2 years. Tissue samples were received at the laboratory below 6 ºC and within 28 days from sample collection and were immediately frozen below -18 ºC upon laboratory receipt. In AMEC's professional opinion, the samples were frozen below -18 ºC within 28 days from sampling, and all samples were prepared within the method-specified holding time of 2 years; therefore, data usability is not adversely affected.

7.2 Laboratory Blanks

Inorganic arsenic was not detected in the laboratory blanks associated with the analysis of these samples.

7.3 Standard Reference Material

The laboratory was unable to find SRM for inorganic arsenic in tissue. Therefore, AMEC used the arsenobetaine and total arsenic SRM recoveries to monitor analytical batch accuracy and qualify data. Recoveries outside the laboratory-specified 75% to 125% guidance limits for fully usable data are described below.

The arsenobetaine (74%) and total arsenic (69%) recoveries were outside control limits in the SRM analysis associated with batch 121809-LCDRC. Specific limitations include the following:

- AMEC UJ qualified the nondetected inorganic arsenic results from samples J196F7 and J196L9 because of possible low analytical bias. (**UJ**-IC)
- AMEC J qualified the detected inorganic arsenic results from samples J196K2, J19702, J18WW4, J19700, J19692, J196D0, J196D1, J19693, and J196D2 because of possible low analytical bias. (**J**-IC)

7.4 Matrix Spikes

Matrix spike (MS) recoveries were within the method-specified 50% to 150% guidance limits and relative percent differences (RPDs) were less than the 35% guidance limit for fully usable data.

7.5 Duplicates

The RPDs between original analyses and laboratory duplicate analyses for inorganic arsenic were less than the method-specified 35% guidance limits for fully usable data.

7.6 LCS Recovery

There is no method-specified guidance limits for LCS recoveries. Therefore, AMEC compared laboratory control sample (LCS) recoveries to the method-specified 50% to150% guidance limits for ongoing precision and accuracy sample recoveries. All LCS recoveries associated with the inorganic arsenic analyses were within these guidance limits for fully usable data.

7.7 Data Reporting and Analytical Procedures

The laboratory reported results down to the MDL. The MDL is a statistically derived limit which is usually 3 to 5 times smaller than the method reporting limit (MRL) (the lowest calibration point). Results reported between the MDL and MRL are typically considered estimates. The laboratory did not provide the MRL in their data packages; therefore, AMEC could not evaluate the quality of data between the MDL and MRL.

8.0 HEXAVALENT CHROMIUM BY EPA SW-846 METHOD 6800

Hexavalent chromium data from these samples may be considered usable with the limitations and exceptions described in Sections 8.1 through 8.6. Qualifiers added to the data during hexavalent chromium validation are presented in Table 8, qualifier definitions are provided in Section 3.0, and qualification rationale abbreviations are provided in Section 4.0.

Table 8: Summary of Data Qualifiers for Hexavalent Chromium

Sample ID	Hexavalent Chromium
J193L2	UJ-LM

8.1 Holding Times

There is no regulatory holding time for hexavalent chromium in tissue. The laboratory used guidance from EPA method 1632 (Section 8.4) which states, “Tissue samples can be frozen in the sampling containers at -18°C or freeze-dried and stored at room temperature. Holding time has not been evaluated but limited data indicates dry samples are stable for several years without detectable change.” All samples were freeze dried upon laboratory receipt and analyzed within 180 days. In AMEC’s professional opinion, data usability is not adversely affected.

8.2 Laboratory Blanks

Hexavalent chromium was not detected in the laboratory blanks associated with the analysis of these samples.

8.3 Matrix Spikes

Recoveries outside the method-specified 85% to 115% guidance limits and RPDs greater than the default 30% guidance limit for fully usable data are described below.

The hexavalent chromium recovery of 73% was low in the MS analysis of sample J193L2. AMEC UJ qualified the nondetected hexavalent chromium result from this sample because of potentially low analytical bias. (**UJ**-LM)

8.4 Duplicates

The RPDs between original analyses and laboratory duplicate analyses for hexavalent chromium were less than the default 30% guidance limits for fully usable data.

8.5 LCS Recovery

There is no method-specified guidance limits for LCS recoveries. Therefore, AMEC compared LCS recoveries to the method-specified 50% to 150% guidance limits for MS recoveries. All LCS recoveries associated with the hexavalent chromium analyses were within these guidance limits for fully usable data.

8.6 Data Reporting and Analytical Procedures

The laboratory reported results down to the MDL. The MDL is a statistically derived limit which is usually 3 to 5 times smaller than the MRL (the lowest calibration point). Results reported between the MDL and MRL are typically considered estimates. The laboratory did not provide the MRL in their data packages; therefore, AMEC could not evaluate the quality of data between the MDL and MRL.

9.0 METHYL MERCURY BY EPA SW-846 METHOD 1630M

Methyl mercury data from these samples may be considered usable without qualification.

9.1 Holding Times

There is no method-specified holding time for methyl mercury analysis in tissue. However, all samples were analyzed within the 90 day holding time defined by EPA method 1631E for total mercury in water and the 1 year holding time for frozen tissue, sludge, sediment, and soil samples defined in EPA method 1631. In AMEC's professional opinion, data usability is not adversely affected.

9.2 Laboratory Blanks

Methyl mercury was not detected in the laboratory blanks associated with the analysis of these samples.

9.3 Matrix Spikes

Recoveries were within the method-specified 65% to 135% guidance limits and RPDs were greater than the 35% guidance limit for fully usable data.

9.4 Duplicates

The RPDs between original analyses and laboratory duplicate analyses for methyl mercury were less than the method-specified 35% guidance limits for fully usable data.

9.5 LCS Recovery

There is no method-specified guidance limits for LCS recoveries. Therefore, AMEC compared LCS recoveries to the method-specified 67% to 133% guidance limits for ongoing precision and accuracy sample recoveries. All LCS recoveries associated with the inorganic arsenic analyses were within these guidance limits for fully usable data

9.6 Data Reporting and Analytical Procedures

The laboratory reported results down to the MDL. The MDL is a statistically derived limit which is usually 3 to 5 times smaller than the MRL (the lowest calibration point). Results reported between the MDL and MRL are typically considered estimates. The laboratory did not provide the MRL in their data packages; therefore, AMEC could not evaluate the quality of data between the MDL and MRL.

10.0 SUMMARY

AMEC R qualified and rejected the PCB 3 results from samples J18K87, J19037, J19276, J19289, and J19464 because of extremely low IS recoveries. (Section 6.5)

The remainder of the data generated for the Woodard & Curran Hanford Samples are fully usable with the addition of the qualifiers listed in Table 2. Qualified data are summarized below:

- AMEC J qualified detected PCB results and UJ qualified nondetected PCB results from samples J17W23, J18692, J18HW9, and J18HW67 because of elevated sample receipt temperatures. (Section 5.0)
- AMEC J qualified PCB data when ion abundance ratios were outside the method-specified limits in the initial calibration. (Section 6.2)
- AMEC U qualified PCB analytes that were detected in both the laboratory blank and field sample when the concentration detected in the sample was less than five times the concentration detected in the blank. (Section 6.4)

- AMEC J qualified detected PCB results and UJ qualified nondetected PCB results when the LIIS, used to quantify the associated ISs, recoveries were low. (Section 6.6)
- AMEC J qualified PCB results when the analyte concentrations were between the MDL and the RL. (Section 6.9)
- AMEC U qualified PCB analytes that did not meet all method-specified identification criteria. (Section 6.9)
- AMEC J qualified the detected inorganic arsenic results and UJ qualified the nondetected results from samples J196F7, J196L9, J196K2, J19702, J18WW4, J19700, J19692, J196D0, J196D1, J19693, and J196D2 because of low SRM recoveries. (Section 7.3)
- AMEC UJ qualified the nondetected hexavalent chromium result from sample J193L2 because of a low MS recovery. (Section 8.3)

Of the 4,382 results from field samples, 675 (15%) were J qualified, 1328 (30%) were UJ qualified, 412 (9.4%) were U qualified, and 5 (0.12%) were R qualified and rejected.

LIMITATIONS

This report was prepared exclusively for Woodard & Curran by AMEC. The quality of information, conclusions, and estimates contained herein is consistent with the level of effort involved in AMEC services and based on: i) information available at the time of preparation, ii) data supplied by outside sources, and iii) the assumptions, conditions, and qualifications set forth in this report. This data validation report is intended to be used by Woodard & Curran only, subject to the terms and conditions of its contract with AMEC. Any other use of, or reliance on, this report by any third party is at that party's sole risk.

Lab Duplicate Sample ID: J18XM6	Yes	None	-	No action	
Standard Reference Recovery	Yes	None	-	No action	
QC Summary					
Validity of Data	All QC criteria were met.				
Additional Notes:					

H.4.11 SEQ082009

SDG SEQ82009. Hexavalent Chromium QC Review Summary Sheet

Project: Hanford – Columbia River Component of the RCBRA	**SDG No.:** SEQ82009	**W&C Project No.:**222007
Medium: Fish Tissue **Fish Type:** Various	Sheet 1 of 1	**Analytes:** Cr $^{+6}$
Samples: J19446, J19447, J19456, J19457, J19466, J19467		

Laboratory: Battelle	**Date QC Review Completed:** 05/27/2010 **Complete By:** RDD	**Sample Collection Date:** 08/17/2009	**Sample Analysis Date:** 01/25/2010

QC Parameter	All in Spec.?	Non-Compliant Results	Flag	Action/ Notes	Associated Samples
Holding Times	Yes	None	-	No action	
Blanks					
Preparation Blank	Yes	None	-	No action	
Other QC Results					
LCS Results	Yes	None	-	No action	
Matrix Spike	None analyzed		-	-	
Lab Duplicate	Yes	None	-	No action	
Standard Reference Recovery	Yes	None	-	No action
