Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 28 days for total organic carbon.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Method Blanks**

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

All accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicate

One set of field duplicates (J18610/J18795) was submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All field duplicates results were acceptable.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package No. K1540 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

None found.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the 134sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Case Narrative
REVISION

This narrative is issued to revise item 7, where matrix QC is associated with client SDG# K1542.

Client: WC-HANFORD RC-116 K1540
LVL#: 0902047

W.O.#: 60049-001-001-0001-00
Date Received: 02-14-09

INORGANIC NARRATIVE

1. This narrative covers the analysis of 27 solid samples.

2. The samples were prepared and analyzed in accordance with the method indicated on the data summary report.

   Lionville Lab (LvL) is NELAP accredited by the State of Pennsylvania. For a complete list of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager. LvL certifies that all test results meet the requirements of NELAC with any exception noted in the following statements.

3. Sample holding times as required by the method and/or contract were met.

4. The results presented in this report are derived from samples that met LvL's sample acceptance policy.

5. The method blanks were within the method criteria.

6. The Laboratory Control Samples (LCS) were within the laboratory control limits.

7. The matrix spike recovery was within the 75-125% control limits. Matrix QC for prep batch L903193 is associated with SDG# K1542 (LVL# 0902058).

8. The replicate analysis was within the 20% Relative Percent Difference (RPD) control limit.

9. Total Organic Carbon samples are dried prior to analysis.

10. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard copy package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

Ian Daniels

1 – ICP metals by 6010B and mercury by 7471A.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows. Soil samples must be analyzed within 6 months for ICP metals and 28 days for mercury.

All holding times were acceptable.

- **Preparation (Method) Blanks**

Preparation Blanks

At least one preparation blank, consisting of deionized distilled water processed through each sample preparation and analysis procedure, must be prepared and analyzed with every sample delivery group. In the case of positive blank results, samples with digestate concentrations less than five times the preparation blank value have had their associated values qualified as non detected and flagged "U". Samples with concentrations of greater than five times the highest blank concentration do not require qualification.

In the case of negative blank results, if the absolute value exceeds the contract required detection limit (CRDL), all nondetects are rejected and flagged "UR" and all detects that are less than ten times the absolute value of the associated preparation blank result are qualified as estimates and flagged "J". If the absolute value of the negative preparation blank is greater than the instrument detection limit (IDL) and less than or equal to the CRDL, all nondetects are qualified as estimates and flagged "UJ" and all detects less than ten times the absolute value of the blank are qualified as estimates and flagged "J". If the sample results are greater than ten times the absolute value of the preparation blank, no qualification is necessary.

Due to method blank contamination, all tin results were qualified as undetected and flagged "UJ".

All other preparation blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

Accuracy

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

Due to matrix spike recoveries outside QC limits (51%), all zinc results in samples J187D8, J187D7, J187D9, J187F0, J187F1, J187K6, J187K7, J187K8, J187K9, J187L0, J17X03, J187Y2 and J187Y5 were qualified as estimates and flagged "J".

Due to an LCS recovery outside QC limits, all detected antimony (168% & 170%), arsenic (195% & 195%), iron (148% & 133%), vanadium (208% & 181%) and thallium (0% & 0%) results were qualified as estimates and flagged "J".

Due to LCS recoveries outside QC limits, the calcium (151%) and magnesium (168%) result in samples J18610, J18764-A, J18779, J18794, J18795, J18796, J18797, J18798, J18799, J187B0, J187D2, J187D4 and J187D6 were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Precision

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicate

One set of field duplicates (J18610/J18795) was submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All field duplicates results were acceptable.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the project RQLs to ensure that laboratory detection levels meet the required criteria. All results met the RQL.

- **Completeness**

Data package No. K1540 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to method blank contamination, all tin results were qualified as undetected and flagged "UJ"
- Due to matrix spike recoveries outside QC limits (51%), all zinc results in samples J187D8, J187D7, J187D9, J187F0, J187F1, J187K6, J187K7, J187K8, J187K9, J187L0, J17X03, J187Y2 and J187Y5 were qualified as estimates and flagged "J".
- Due to an LCS recovery outside QC limits, all detected antimony (168% & 170%), arsenic (195% & 195%), iron (148% & 133%), vanadium (208% & 181%) and thallium (0% & 0%) results were qualified as estimates and flagged "J".
- Due to LCS recoveries outside QC limits, the calcium (151%) and magnesium (168%) result in samples J18610, J18784-A, J18779, J18794, J18795, J18796, J18797, J18798, J18799, J187B0, J187D2, J187D4 and J187D6 were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

METALS ORGANIC DATA QUALIFICATION SUMMARY*

SDG: K1540	**REVIEWER: ELR**	**Project: RCBRA**	**QC Issue**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Tin	UJ	All	Method blank contamination
Zinc	J	J187D8, J187D7 J187D9, J187F0 J187F1, J187K6 J187K7, J187K8 J187K9, J187L0 J17X03, J187Y2 J187Y5	MS recovery
Antimony Arsenic Iron Vanadium Thallium	J	All	LCS recovery
Calcium Magnesium	J	J18610, J18764 J18779, J18794 J18795, J18796 J18797, J18798 J18799, J187B0 J187D2, J187D4 J187D6	LCS recovery

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

METALS

The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise.

1. This narrative covers the analyses of 27 soil samples. The samples are reported on a wet weight, 'as-received' basis.

2. The samples were prepared and analyzed in accordance with methods checked on the attached glossary.

3. All analyses were performed within the required holding times.

4. Please refer to the Sample Receipt Check List for sample discrepancies in LvLI's sample acceptance policy.

5. All Initial and Continuing Calibration Verifications (ICV/CCVs) were within the 90-110% control limits.

6. All Initial and Continuing Calibration Blanks (ICB/CCBs) were within control limits (less than the LOQ).

7. All preparation/method blanks (MB) were within method criteria (less than the Limit of Quantitation (3-10X the LOD), or samples greater than 20X MB value).

8. All ICP Interference Check Standards were within control limits.

9. The Standard Reference Material results (SRM) were within the Prediction Intervals supplied by the SRM manufacturer with the exception of L904016-SRM1 for Calcium at 151% (129.9% maximum). The samples digested in batch L904016 may be biased slightly high for Calcium.

10. The matrix spike (MS) recoveries for 5 analytes were outside the 75-125% control limits

[illegible]

The results presented in this report relate only to the analytical testing and conditions of the samples at receipt and during storage. All pages of this report are integral parts of the analytical data. Therefore, this report should only be reproduced in its entirety of [illegible] pages.

11. For analytes where the ICP MS is out-of control, a post-digestion MS (PDS) and serial dilution are performed. A PDS was prepared at meaningful concentration level for the following analytes:

Sample ID	Element	PDS Concentration (ppb)	PDS % Recovery
J18610	Aluminum	22,000	102.5
	Iron	42,000	97.3
	Manganese	1,000	93.7
J187D8	Aluminum	22,000	97.0
	Iron	42,000	92.8
	Silicon	5,100	93.6
	Zinc	1,100	100.8

12. The duplicate analyses for 3 analytes on sample J18610, and for 7 analytes on sample J187D8, were outside the 20% Relative Percent Difference (RPD) control limits.

13. For the purposes of this report, the data has been reported to the Limit of Detection (LOD). Values between the LOD and the Limit of Quantitation (LOQ) are acquired in a region of less-certain quantification.

14. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

15. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

SPECIAL INSTRUCTIONS

(1) Gamma Spec - {Full List} {Americium-241, Antimony-125, Beryllium-7, Cerium-144, Cesium-137, Cobalt-60, Europium-152, Europium-154, Europium-155, Potassium-40, Radium-226, Radium-228, Ruthenium-106, Uranium-235, Uranium-238}

(2) Strontium-89,90 - Total Sr, Isotopic Thorium {Thorium-228, Thorium-230, Thorium-232}, Isotopic Uranium {Uranium-233/234, Uranium-235, Uranium-238}; Isotopic Plutonium

(3) ICP Metals - 6010 {Full List} {Aluminum, Antimony, Arsenic, Barium, Beryllium, Bismuth, Boron, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Lithium, Magnesium, Manganese, Molybdenum, Nickel, Phosphorus, Potassium, Selenium, Silicon, Silver, Sodium, Strontium, Thallium, Tin, Uranium, Vanadium, Zinc}; Mercury - 7471 - (CVAA)

Sampler unavailable to remove samples from controlled storage. Shipper removed samples from storage location taking custody of samples for shipment to lab.

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Technical verification documentation present? .... Yes [✓ No] N/A

Comments:

2. INSTRUMENT PERFORMANCE AND CALIBRATIONS (Levels D and E)

Initial calibrations performed on all instruments? .... Yes No [✓ N/A]

Initial calibrations acceptable? .... Yes No [✓ N/A]

ICP interference checks acceptable? .... Yes No [✓ N/A]

ICV and CCV checks performed on all instruments? .... Yes No [✓ N/A]

ICV and CCV checks acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

Calculation check acceptable? .... Yes No [✓ N/A]

Comments:

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

3. BLANKS (Levels B, C, D, and E)

ICB and CCB checks performed for all applicable analyses? (Levels D, E) .... Yes No [✓ N/A]

ICB and CCB results acceptable? (Levels D, E) .... Yes No [✓ N/A]

Laboratory blanks analyzed? .... [✓ Yes] No N/A

Laboratory blank results acceptable? .... Yes [✓ No] N/A

Field blanks analyzed? (Levels C, D, E) .... Yes [✓ No] N/A

Field blank results acceptable? (Levels C, D, E) .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: tlm - UJ all no FB

4. ACCURACY (Levels C, D, and E)

MS/MSD samples analyzed? .... [✓ Yes] No N/A

MS/MSD results acceptable? .... [✓ Yes] No N/A

MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]

LCS/BSS samples analyzed? .... [✓ Yes] No N/A

LCS/BSS results acceptable? .... Yes [✓ No] N/A

Standards traceable? (Levels D, E) .... Yes No [✓ N/A]

Standards expired? (Levels D, E) .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Performance audit sample(s) analyzed? .... Yes [✓ No] N/A

Performance audit sample results acceptable? .... Yes No [✓ N/A]

Comments: no PAS

~~MS - Silicon~~

LCS - J all detect antimony, arsenic, iron, thallium + vanadium

magnesium + calcium - 6010 - D6 - J all detects

zinc - MS - J - D8 - Y5

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

5. PRECISION (Levels C, D, and E)

Duplicate RPD values acceptable? .... [✓ Yes] No N/A

Duplicate results acceptable? .... [✓ Yes] No N/A

MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]

Field duplicate RPD values acceptable? .... [✓ Yes] No N/A

Field split RPD values acceptable? .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments:

6. ICP QUALITY CONTROL (Levels D and E)

ICP serial dilution samples analyzed? .... Yes No [✓ N/A]

ICP serial dilution %D values acceptable? .... Yes No [✓ N/A]

ICP post digestion spike required? .... Yes No [✓ N/A]

ICP post digestion spike values acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

Transcription/calculation errors? .... Yes No [✓ N/A]

Comments:

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

7. FURNACE AA QUALITY CONTROL (Levels D and E)

Duplicate injections performed as required? .... Yes No [✓ N/A]
Duplicate injection %RSD values acceptable? .... Yes No [✓ N/A]
Analytical spikes performed as required? .... Yes No [✓ N/A]
Analytical spike recoveries acceptable? .... Yes No [✓ N/A]
Standards traceable? .... Yes No [✓ N/A]
Standards expired? .... Yes No [✓ N/A]
MSA performed as required? .... Yes No [✓ N/A]
MSA results acceptable? .... Yes No [✓ N/A]
Transcription/calculation errors? .... Yes No [✓ N/A]
Comments:

8. HOLDING TIMES (all levels)

Samples properly preserved? .... [✓ Yes] No N/A
Sample holding times acceptable? .... [✓ Yes] No N/A
Comments:

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

9. RESULT QUANTITATION AND DETECTION LIMITS (all levels)

Results reported for all requested analyses? .... [✓ Yes] No N/A

Results supported in the raw data? (Levels D, E) .... Yes No [✓ N/A]

Samples properly prepared? (Levels D, E) .... Yes No [✓ N/A]

Detection limits meet RDL? .... [✓ Yes] No N/A

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Subject: Volatile - Data Package No K1540-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1540 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analysis
J18610	2/12/09	Solid	C	See note 1
J18779	2/12/09	Solid	C	See note 1
J18794	2/12/09	Solid	C	See note 1
J18795	2/12/09	Solid	C	See note 1
J18796	2/12/09	Solid	C	See note 1
J18797	2/12/09	Solid	C	See note 1

J10672	2/12/09	Solid	C	See note 1

1 – Volatiles by 8260C.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0. September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6 Additional Date Requested by Client

DATA QUALITY OBJECTIVES

- **Holding Times & Sample Preservation**

Analytical holding times were assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Samples must be extracted and analyzed within 14 days of the date of sample collection.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Method Blanks**

Method blank analyses are conducted to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. Analytical results for analytes present in any sample at less than five times the concentration of that analyte found in the associated blank are qualified as non-detects and flagged "U". Common laboratory contaminants present in samples at less than ten times the concentration of that analyte found in the associated blank are qualified as non-detects. If a sample result is less than the CRQL and is less than five times (or less than ten times for lab contaminants) the highest associated blank result, the sample result value is raised to the CRQL level and qualified as undetected "U".

All method blank results were acceptable.

Field Blanks

Three field (trip) blanks (J18672, J17W12 & J18680) were submitted for analysis. Methylene chloride and acetone was detected in sample J18680. Under the WCH statement of work, no qualification is required. No other analytes were detected in the field blanks.

- **Accuracy**

Matrix Spike/Matrix Spike Duplicate & Blank Spike Recoveries

Matrix spike/matrix spike duplicate analyses are used to assess the analytical accuracy of the reported data and the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike/matrix spike duplicate analyses are performed in duplicate using five compounds for which percent recoveries must be within a range of 50-150% or within laboratory control limits. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Undetected sample results with spike recoveries below control limits are qualified as estimates and flagged "UJ". Undetected sample results are not qualified if the spike recovery is above control limits Sample results greater than five times the spike concentration require no qualification.

Due to LCS (152%), matrix spike (193%) and matrix spike duplicate (173%) recoveries outside QC limits, the acetone result in sample J18680 was qualified as an estimate and flagged "J".

All other accuracy results were acceptable.

Surrogate Recovery

The analyses of surrogate compounds provide a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the EPA CLP program. If two surrogates of the same class of compounds (base/neutral or acid) are out of control limits, all associated sample results greater than the contract required quantitation limit (CRQL) are qualified as estimates and flagged "J". Sample results less than the CRQL and below the lower control limit are qualified as estimates and flagged "UJ". Sample results less than the CRQL with recoveries above the upper control limit require no qualification. If a surrogate recovery is less than 10%, detects are qualified as estimates and flagged "J" and nondetects are rejected and flagged "UR".

All surrogate results were acceptable.

- **Precision**

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike (MS)/matrix spike duplicate (MSD) results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed by the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. Samples results must be within RPD limits of +/-30%. If RPD values are out of specification and the sample

concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

Due to an RPD outside QC limits (31%), all 2-hexanone results in samples J18610 and J18680 were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

One set of field duplicates (J18610/J18795) was submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All field duplicates results were acceptable.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQL's) to ensure that laboratory detection levels meet the required criteria. Fourteen 1,1-dichlorethane results exceeded the RQL. Under the WCH statement of work, no qualification is required. All other analyes met the RQL.

- **Completeness**

Data package No. K1540 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to LCS (152%), matrix spike (193%) and matrix spike duplicate (173%) recoveries outside QC limits, the acetone result in sample J18680 was qualified as an estimate and flagged "J".

- Due to an RPD outside QC limits (31%), all 2-hexanone results in samples J18610 and J18680 were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Fourteen 1,1-dichlorethane results exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the same quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

VOLATILE ORGANIC DATA QUALIFICATION SUMMARY*

SDG: K1525	**REVIEWER: ELR**	**Project: RCBRA**	**QC Issue**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Acetone	U	J18680	Method blank contamination
2-hexanone	J	J18610, J18680	RPD

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Case Narrative
REVISION

This narrative is issued to revise item 5, where matrix QC is associated with SDGs K1539 and K1537.

Client: WC-HANFORD RC-116
LVL #: 0902047
SDG/SAF # K1540 / RC-116

W.O. #: 60049-001-001-0001-00
Date Received: 02-14-2009

GC/MS VOLATILE

Fifteen (15) solid samples were collected on 02-11,12-2009

The samples and associated QC samples were analyzed according to criteria set forth in Lionville Laboratory SOPs based on EPA Method 8260B and Soil Method 5030A for TCL Volatile target compounds on 02-15,16,17-2009.

The following is a summary of QC results accompanying the sample results. Lionville Laboratory (LVL) certifies that all test results meet the requirements of NELAC except as noted below:

1. Samples are reported on a "wet weight" basis.
2. Samples were analyzed within hold time.
3. Non-target compounds were not detected in these samples.
4. All surrogate recoveries were within acceptance criteria.
5. Matrix spike recoveries for prep batch L902167 were within acceptance criteria. Matrix QC for preparation batches L902165 and L902166 are associated with SDG# K1539 (LVL# 0902041) and SDG# K1537 (LVL# 0902036), respectively.
6. All blank spike recoveries were within acceptance criteria.
7. The method blanks were below the reporting limit for all target compounds.
8. All internal standard area and retention time criteria were met.
9. Manual integrations are performed according to SOP QA-125 to produce quality data with utmost integrity. All manual integrations are required to be technically valid and properly documented. Appropriate technical flags are defined in the Glossary ("Technical Flags For Manual Integration").

[illegible]

2

10. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager

11. "I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

Case Narrative

Client: WC-HANFORD RC-116
LVL #: 0902047
SDG/SAF # K1540 / RC-116

W.O. #: 60049-001-001-0001-00
Date Received: 02-14-2009

DIESEL RANGE ORGANICS

Twelve (12) other solid samples were collected on 02-12-2009

The samples and their associated QC samples were extracted on 02-27-2009 and analyzed according to Lionville Laboratory SOPs based on SW846, 3rd Edition procedure on 03-05,06-2009. The extraction procedure was based on method 3540C and the extracts were analyzed based on method 8015B for DRO.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise. The following is a summary of QC results accompanying the sample results. Lionville Laboratory Inc (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. The samples were extracted one day outside of recommended hold time.

2. The method blank contained Motor Oil Range Organics (MRO) at a level above the Quantitation limit. Samples contained MRO in the range of 1 to 2 times the level seen in the blank, and with a similar pattern to the peaks seen in the blank. The contamination in the blank for MRO was greater than the lab PQL, although no client MRL exists for this analyte. Lab contamination of these samples should be suspected, and the data user should consider the sample values to be maximum values.

3. All obtainable surrogate recoveries were within acceptance criteria.

4. All blank spike recoveries were within acceptance criteria.

5. All matrix spike recoveries were within acceptance criteria.

6. All initial calibrations associated with this data set were within acceptance criteria.

7. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.

8. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

9. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

Subject: PCB/Pesticide - Data Package No. K1540-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1540 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Anaysis
J18610	2/12/09	Solid	C	See note 1
J18779	2/12/09	Solid	C	See note 1
J18794	2/12/09	Solid	C	See note 1
J18795	2/12/09	Solid	C	See note 1
J18796	2/12/08	Solid	C	See note 1
J18797	2/12/09	Solid	C	See note 1
J187D2	2/12/09	Solid	C	See note 1
J187D4	2/12/08	Solid	C	See note 1
J187D5	2/12/09	Solid	C	See note 1

J187K7	2/12/09	Solid	C	See note 1
J17X03	2/12/09	Solid	C	See note 1
J187Y2	2/12/09	Solid	C	See note 1

1 - PCBs by 8082 and pesticides by 8081A.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY OBJECTIVES

Holding Times & Sample Preservation

Sample data were assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be extracted within 14 days of the date of sample collection and analyzed within 40 days from the date of extraction.

If holding times are exceeded by less than or equal to twice times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detected sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR"

All holding times were acceptable.

Method Blank

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation or analysis. At least one method blank analysis must be conducted for every 20 samples. Method blanks should not contain target compounds at a concentration greater than required quantitation limit (RQL). If target compounds are present, sample results less than five times the blank concentration are qualified as undetected and flagged "U". If the sample result is less than five times the blank concentration and less than RQL, the result is qualified as undetected and elevated to the RQL.

Due to method blank contamination, the aldrin result in sample J187D5 was qualified as undetected and flagged "U".

All other method blank results were acceptable.

Field Blanks

No field blanks were submitted for analysis

Accuracy

Matrix Spike & Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 50% to 150%. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Non-detected sample results with spike recoveries outside control limits are qualified as estimates and flagged "UJ". Sample results greater than five times the spike concentration require no qualification.

Due to the lack of an LCS, matrix spike and matrix spike duplicate analysis, all toxaphene results were qualified as estimates and flagged "J".

All other accuracy results were acceptable

Surrogate Recovery

The analysis of surrogate compounds provides a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the laboratory. When a surrogate compound recovery is outside the control window, all positively identified target compounds associated with the unacceptable surrogate recoveries are qualified as estimates and flagged "J" Non-detected compounds with surrogate recoveries less than the lower control limit are qualified as having an estimated detection limit and flagged "UJ". Non-detected compounds with surrogate recoveries above the upper control limit require no qualification.

All surrogate results were acceptable.

- **Precision**

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike/matrix spike duplicate results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed as the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. For soil samples, results must be within RPD limits of plus/minus 30% If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

Due to the lack of a matrix spike and matrix spike duplicate analysis, all toxaphene results were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

One set of field duplicates (J18810/J18795) was submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All field duplicates results were acceptable.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the project specific RQLs to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data Package No. K1540 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 0%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to method blank contamination, the aldrin result in sample J187D5 was qualified as undetected and flagged "U"
- Due to the lack of an LCS, matrix spike and matrix spike duplicate analysis, all toxaphene results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the procedures herein are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

PCB/PESTICIDE DATA QUALIFICATION SUMMARY*

SDG: K1540	**REVIEWER: ELR**	**Project: RCBRA**	**QC Issue**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Aldrin	U	J187D5	Method blank contamination
Toxaphene	J	All	No MS, MSD or LCS

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Laboratory Narrative and Chain-of-Custody Documentation

Case Narrative

Client: WC-HANFORD RC-116
LVL #: 0902047
SDG/SAF # K2540 RC 116

W.O. #: 60049-001-001-0001-00
Date Received: 02-14-2009

PCBs

Thirteen (13) solid samples were collected on 02-12-2009.

The samples and associated QC samples were extracted on 02-24-2009 and analyzed according to Lionville Laboratory SOPs based on SW846, 3rd Edition procedure on 03-10,11,12,17-2009. The extraction procedure was based on method 3540C and the extracts were analyzed based on method 8082.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise. The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. All required holding times for extraction and analysis have been met.

2. The samples and their associated QC samples received Copper-Sulfur and Sulfuric Acid cleanups according to Lionville Laboratory SOPs based on SW846 methods 3660A and 3665A respectively.

3. The method blank was below the reporting limits for all target compounds.

4. All obtainable surrogate recoveries were within acceptance criteria.

5. All blank spike recoveries were within acceptance criteria.

6. All matrix spike recoveries were within acceptance criteria.

7. All initial calibrations associated with this data set were within acceptance criteria.

8. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.

9. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

10. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the laboratory manager or a designee as verified by the following signature.

CHLORINATED PESTICIDES

Thirteen (13) solid samples were collected on 02-12-2009.

The samples and their associated QC samples were extracted on 02-24-2009 and analyzed according to Lionville Laboratory SOPs based on SW846, 3rd Edition procedure on 03-16,17-2009. The extraction procedure was based on method 3540C and the extracts were analyzed based on method 8081A.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise. The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. All required holding times for extraction and analysis have been met.
2. The samples and their associated QC samples received Copper-Sulfur cleanups according to Lionville Laboratory SOPs based on SW846 method 3660A.
3. The method blank contained Aldrin at a level below the quantitation limit. Aldrin was not detected in any samples processed with this blank at or above the quantitation limit. A copy of the Sample Discrepancy Report (SDR# 09GC069) has been enclosed.
4. All obtainable surrogate recoveries were within acceptance criteria.
5. All blank spike recoveries were within acceptance criteria.
6. Four (4) of forty (40) matrix spike recoveries were outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR# 09GC069) has been enclosed.
7. All samples required a 4-fold instrument dilution due the matrix and high concentrations of non-target analytes. Reporting limits have been adjusted to reflect the necessary dilutions.

8. All initial calibrations associated with this data set were within acceptance criteria.

9. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.

10. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

11. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Date

Lionville Laboratory Sample Discrepancy Report (SDR)

SDR #: 09SC069

Initiator: L. Kauffman
Date: 4-27-2009
Client: [illegible] Hanford RC-116
Batch: C9D?042
Samples: [illegible]
Method: SW846/[illegible]
Parameter: OC/[illegible]
Matrix: [illegible]
Prep Batch: L9Q125

1. Reason for SDR

a. COC Discrepancy
Tech Profile Error
... Transcription Error
_ Client Request
Wrong Test Code
... Sampler Error on C-O-C
_ Other

b. General Discrepancy
Missing Sample/Extract*
.. Hold Time Exceeded
... Improper Bottle Type
__ Container Broken
Insufficient Sample*
Not Amenable to Analysis
.. Wrong Sample Pulled
.. Preservation Wrong
__ Label ID's Illegible
.. Received Past Hold

Note* Verified by [Log-In] or [Prep Group] (circle) signature/date

c. Problem (Include all relevant specific results, attach data if necessary)

Aldrin hit in L9Q125-BLK1 at J level. No Aldrin hits in samples above ~~detection~~ quantitation limit. JD 4/27/09

~~Each of~~ Three of fourty matrix spike recoveries outside acceptance range. JD 4/27/09

2. Known or Probable Causes(s)

3. Discussion and Proposed Action

__ Re-log
_ Entire Batch
Following Samples
Re-leach
__ Re-extract
Re-digest
__ Revise EDD
Change Test Code to
_ Place On/Take Off Hold (circle)

Other Description

Narrate.

4. Project Manager Instructions signature/date 5/4/09

✓ Concur with Proposed Action
__ Disagree with Proposed Action. See Instruction
.. Include in Case Narrative
__ Client Contacted
Date/Person
__ Add
.. Cancel

5. Final Action signature/date [illegible]

✓ Verified (a [log][leach][extract][digest][analysis] (circle)
✓ Included in Case Narrative
Hard Copy COC Revised
_ Electronic COC Revised
EDD Corrections Completed

Other Explanation.

When Final Action has been recorded, forward original to QA for diposition.

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Technical verification documentation present? .... Yes [✓ No] N/A

Comments:

2. INSTRUMENT PERFORMANCE AND CALIBRATIONS (Levels D and E)

Initial calibrations acceptable? .... Yes No [✓ N/A]

Continuing calibrations acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

Calculation check acceptable? .... Yes No [✓ N/A]

DDT and endrin breakdowns acceptable? .... Yes No [✓ N/A]

Comments:

PCB DATA VALIDATION CHECKLIST

3. BLANKS (Levels B, C, D, and E)

Calibration blanks analyzed? (Levels D, E) .... Yes No [✓ N/A]

Calibration blank results acceptable? (Levels D, E) .... Yes No [✓ N/A]

Laboratory blanks analyzed? .... [✓ Yes] No N/A

Laboratory blank results acceptable? .... Yes [✓ No] N/A

Field/trip blanks analyzed? (Levels C, D, E) .... Yes [✓ No] N/A

Field/trip blank results acceptable? (Levels C, D, E) .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: [illegible] - () - DS No PB

680 [illegible]

4. ACCURACY (Levels C, D, and E)

Surrogates analyzed? .... [✓ Yes] No N/A

Surrogate recoveries acceptable? .... [✓ Yes] No N/A

Surrogates traceable? (Levels D, E) .... Yes No [✓ N/A]

Surrogates expired? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD samples analyzed? .... [✓ Yes] No N/A

MS/MSD results acceptable? .... [✓ Yes] No N/A

MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]

LCS/BSS samples analyzed? .... [✓ Yes] No N/A

LCS/BSS results acceptable? .... [✓ Yes] No N/A

Standards traceable? (Levels D, E) .... Yes No [✓ N/A]

Standards expired? (Levels D, E) .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Performance audit sample(s) analyzed? .... Yes [✓ No] N/A

Performance audit sample results acceptable? .... Yes No [✓ N/A]

Comments: No BS

Toxaphene - No MS/MSD, LCS [illegible]

PCB DATA VALIDATION CHECKLIST

5. PRECISION (Levels C, D, and E)

Duplicate RPD values acceptable? .... [✓ Yes] No N/A
Duplicate results acceptable? .... [✓ Yes] No N/A
MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]
MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]
Field duplicate RPD values acceptable? .... [✓ Yes] No N/A
Field split RPD values acceptable? .... Yes No [✓ N/A]
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: Acceptable - no MS/MSD - J. [illegible]

755/610

6. SYSTEM PERFORMANCE (Levels D and E)

Chromatographic performance acceptable? .... Yes No [✓ N/A]
Positive results resolved acceptably? .... Yes No [✓ N/A]

Comments:

7. HOLDING TIMES (all levels)

Samples properly preserved? .... [✓ Yes] No N/A
Sample holding times acceptable? .... [✓ Yes] No N/A

Comments:

PCB DATA VALIDATION CHECKLIST

8. COMPOUND IDENTIFICATION, QUANTITATION, AND DETECTION LIMITS (all levels)

Compound identification acceptable? (Levels D, E) ... Yes No [✓ N/A]
Compound quantitation acceptable? (Levels D, E) ... Yes No [✓ N/A]
Results reported for all requested analyses? ... [✓ Yes] No N/A
Results supported in the raw data? (Levels D, E) ... Yes No [✓ N/A]
Samples properly prepared? (Levels D, E) ... Yes No [✓ N/A]
Detection limits meet RDL? ... [✓ Yes] No N/A
Transcription/calculation errors? (Levels D, E) ... Yes No [✓ N/A]

Comments:

9. SAMPLE CLEANUP (Levels D and E)

Fluoricil ® (or other absorbent) cleanup performed? ... Yes No [✓ N/A]
Lot check performed? ... Yes No [✓ N/A]
Check recoveries acceptable? ... Yes No [✓ N/A]
GPC cleanup performed? ... Yes No [✓ N/A]
GPC check performed? ... Yes No [✓ N/A]
GPC check recoveries acceptable? ... Yes No [✓ N/A]
GPC calibration performed? ... Yes No [✓ N/A]
GPC calibration check performed? ... Yes No [✓ N/A]
GPC calibration check retention times acceptable? ... Yes No [✓ N/A]
Check/calibration materials traceable? ... Yes No [✓ N/A]
Check/calibration materials Expired? ... Yes No [✓ N/A]
Analytical batch QC given similar cleanup? ... Yes No [✓ N/A]
Transcription/Calculation Errors? ... Yes No [✓ N/A]

Project: Columbia River Component of the RCBRA – Sediment
Subject: Radiochemistry - Data Package No. K1540-EB

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1540 prepared by Eberline Services (EB). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Anaysis
J187D6	2/12/09	Solid	C	See note 1

1 – Carbon-14, total strontium, technetium 99, alpha spectroscopy and gamma spectroscopy

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Holding times are calculated from Chain-of-Custody forms to determine the validity of the results. The maximum holding time for radiochemical analysis is 6 months.

All holding times were acceptable

Preparation (Method) Blanks

Laboratory Blanks

Blank samples are analyzed to determine if positive results are due to laboratory reagent, sample container, or detector contamination. If blank analysis results indicate the presence of an analyte above the minimum detectable activity (MDA), the following qualifiers are applied: All positive sample results less than five times the highest blank concentration are qualified as estimates and flagged "J"; sample results below the MDA are qualified as undetected and flagged "U"; sample results above the MDA and greater than five times the highest blank concentration are not qualified.

All blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

Accuracy

Accuracy is evaluated from laboratory control sample (LCS) or blank spike sample (BSS) batch samples and spiked samples from the analytical batch. Measured activities are compared to the known added amounts. The acceptable LCS or BSS and matrix spike (MS) recovery range is 70-130%. In addition, samples may be spiked with a radiochemical tracer to assist in isolating the radioisotope of interest with the yield of the tracer being used in calculating sample activity. The acceptable range for tracer recovery is 20% to 105%. Spike sample results outside the above ranges result in associated sample results being qualified as estimates, or not qualified, depending on the activity of the individual sample. Results are rejected for LCS/BSS recoveries of less than 30% and tracer recoveries of less than 20%. and tracer recoveries of greater than 115% for detected results.

Due to the lack of an LCS analysis, all thorium-228 (aspec) and thorium-232 (aspec) results were qualified as estimates and flagged "J".

Due to the lack of a matrix spike analysis, all carbon-14 results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

- **Laboratory Duplicates**

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the contract required detection limit (CRDL) and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All duplicate results were acceptable.

Field Duplicates

One set of field duplicates (J18795/J18610) was submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All field duplicates results were acceptable.

- **Detection Levels**

Reported analytical detection levels for undetected analytes are compared against the project RQLs to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package No. K1540 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiency was noted.

- Due to the lack of an LCS analysis, all thorium-228 (aspec) and thorium-232 (aspec) results were qualified as estimates and flagged "J".
- Due to the lack of a matrix spike analysis, all carbon-14 results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH statement of work are as follows.

U - Indicates the compound or analyte was analyzed for and not detected above the minimum detectable activity (MDA) in the sample. The value reported is the sample result corrected for sample dilution and moisture content by the laboratory. The data is usable for decision making purposes

UJ - Indicates the compound or analyte was analyzed for and not detected at concentrations above the minimum detectable activity (MDA) in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate, but is usable for decision making purposes.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

Appendix 2

Summary of Data Qualification

RADIOCHEMISTRY DATA QUALIFICATION SUMMARY*

SDG: K1640	**REVIEWER: ELR**	**Project: RCBRA**	**QC Issue**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Thorium-228 Thorium-232	J	All	No LCS analysis
Carbon-14	J	All	No MS analysis

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Appendix 4

Laboratory Narrative and Chain-of-Custody Documentation

1.0 GENERAL

Washington Closure Hanford (WCH) Sample Delivery Group K1540 was composed of twelve solid (other solid) samples designated under SAF No. RC-116 with a Project Designation of: Columbia River Component of the RCBRA – Sediment.

The samples were received as stated on the Chain-of-Custody documents. Any discrepancies are noted on the Eberline Analytical Sample Receipt Checklist. The results were sent to WCH via e-mail March 19, 2009.

2.0 ANALYSIS NOTES

2.1 Carbon-14 Analysis

No problems were encountered during the course of the analyses.

2.2 Strontium-90 Analysis

No problems were encountered during the course of the analyses.

2.3 Technetium-99 Analysis

The technetium-99m tracer yield for the sample J18799 was 106%, greater than the control limit of 105%. No other problems were encountered during the course of the analyses.

2.4 Isotopic Thorium Analysis

No problems were encountered during the course of the analyses.

2.5 Isotopic Uranium Analysis

No problems were encountered during the course of the analyses.

2.6 Isotopic Plutonium Analysis

No problems were encountered during the course of the analyses.

2.7 Gamma Spectroscopy

No problems were encountered during the course of the analyses.

3.0 Case Narrative Certification Statement

"I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data obtained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

N. Joseph Verville
Senior Program Manager

1.0 GENERAL

Washington Closure Hanford (WCH) Sample Delivery Group K1540 was composed of thirteen solid (other solid) samples designated under SAF No. RC-116 with a Project Designation of: Columbia River Component of the RCBRA – Sediment

The samples were received as stated on the Chain-of-Custody documents. Any discrepancies are noted on the Eberline Analytical Sample Receipt Checklist. The results were sent to WCH via e-mail March 23, 2009.

2.0 ANALYSIS NOTES

2.1 Carbon-14 Analysis

No problems were encountered during the course of the analyses.

2.2 Strontium-90 Analysis

No problems were encountered during the course of the analyses.

2.3 Technetium-99 Analysis

The technetium-99m tracer yields for twelve of the sixteen analyses (including QC) were between 106% and 114%, greater than the upper control limit of 105%, but less than the absolute limit of 140%. No other problems were encountered during the course of the analyses.

2.4 Isotopic Thorium Analysis

No problems were encountered during the course of the analyses.

2.5 Isotopic Uranium Analysis

No problems were encountered during the course of the analyses.

2.6 Isotopic Plutonium Analysis

No problems were encountered during the course of the analyses.

2.7 Gamma Spectroscopy

No problems were encountered during the course of the analyses.

Transcription/Calculation Errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: No C-14 MS - J all

10. Duplicates (Levels C, D, E) .... ☐ N/A

Duplicates Analyzed at required frequency? .... [✓ Yes] No N/A
RPD Values Acceptable? .... [✓ Yes] No N/A
Transcription/Calculation Errors? (Levels D, E) .... Yes No [✓ N/A]
Comments:

11. Field QC Samples (Levels C, D E) .... ☐ N/A

Field duplicate sample(s) analyzed? .... [✓ Yes] No N/A
Field duplicate RPD values acceptable? .... [✓ Yes] No N/A
Field split sample(s) analyzed? .... Yes [✓ No] N/A
Field split RPD values acceptable? .... Yes No [✓ N/A]
Performance audit sample(s) analyzed? .... Yes [✓ No] N/A
Performance audit sample results acceptable? .... Yes No [✓ N/A]
Comments: no FS or PAS

12. Holding Times (All levels)

Are sample holding times acceptable? .... [✓ Yes] No N/A
Comments:

13. Results and Detection Limits (All Levels) .... ☐ N/A

Results reported for all required sample analyses? .... [✓ Yes] No N/A

Results supported in raw data? (Levels D, F) .... Yes No [✓ N/A]

Results Acceptable? (Levels D, F) .... Yes No [✓ N/A]

Transcription/Calculation errors? (Levels D, F) .... Yes No [✓ N/A]

MDA's meet required detection limits? .... [✓ Yes] No N/A

Transcription/calculation errors? (Levels D, F) .... Yes No [✓ N/A]

F.1.2.8 SDG K1544

SAF-RC-118
Columbia River Component of the RCBRA – Tissues
FINAL VALIDATION PACKAGE

COMPLETE COPY OF VALIDATION PACKAGE TO:

Kathy Wendt H4-21

COMMENTS:

SDG K1544 **SAF-RC-118**

Date: 7 December 2009
To: Washington Closure Hanford (technical representative)
From: ELR Consultants
Project: Columbia River Component of the RCBRA - Sediment
Subject: Volatile - Data Package No. K1544-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1544 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Anaysis
J18679	2/19/09	Solid	C	See note 1
J18683	2/19/09	Solid	C	See note 1
J18985	2/19/09	Solid	C	See note 1
J18986	2/19/09	Solid	C	See note 1
J18987	2/19/09	Solid	C	See note 1
J18988	2/19/09	Solid	C	See note 1
J18990	2/19/09	Solid	C	See note 1
J18991	2/19/09	Solid	C	See note 1

J189K5	2/19/09	Solid	C	See note 1

1 - Volatiles by 8260C.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6 Additional Date Requested by Client

DATA QUALITY OBJECTIVES

· Holding Times & Sample Preservation

Analytical holding times were assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Samples must be extracted and analyzed within 14 days of the date of sample collection.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

· Method Blanks

Method blank analyses are conducted to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. Analytical results for analytes present in any sample at less than five times the concentration of that analyte found in the associated blank are qualified as non-detects and flagged "U". Common laboratory contaminants present in samples at less than ten times the concentration of that analyte found in the associated blank are qualified as non-detects. If a sample result is less than the CRQL and is less than five times (or less than ten times for lab contaminants) the highest associated blank result, the sample result value is raised to the CRQL level and qualified as undetected "U".

Due to method blank contamination, the methylene chloride result in samples J18991, J18992, J189B5, J189B6, J189J9, J189K2, J189K4 and J189K5 were qualified as undetected and flagged "U".

All other method blank results were acceptable.

<u>Field Blanks</u>

Two field (trip) blanks (J18683 & J18679) were submitted for analysis. No analytes were detected in the field blanks.

- **Accuracy**

Matrix Spike/Matrix Spike Duplicate & Blank Spike Recoveries

Matrix spike/matrix spike duplicate analyses are used to assess the analytical accuracy of the reported data and the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike/matrix spike duplicate analyses are performed in duplicate using five compounds for which percent recoveries must be within a range of 50-150% or within laboratory control limits. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Undetected sample results with spike recoveries below control limits are qualified as estimates and flagged "UJ". Undetected sample results are not qualified if the spike recovery is above control limits. Sample results greater than five times the spike concentration require no qualification.

Due to an LCS (178%), matrix spike (198%) and matrix spike duplicate (193%) recovery outside QC limits, the acetone result in samples J189B6, J189K2 and J189K5 were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Surrogate Recovery

The analyses of surrogate compounds provide a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the EPA CLP program. If two surrogates of the same class of compounds (base/neutral or acid) are out of control limits, all associated sample results greater than the contract required quantitation limit (CRQL) are qualified as estimates and flagged "J". Sample results less than the CRQL and below the lower control limit are qualified as estimates and flagged "UJ". Sample results less than the CRQL with recoveries above the upper control limit require no qualification. If a surrogate recovery is less than 10%, detects are qualified as estimates and flagged "J" and nondetects are rejected and flagged "UR".

All surrogate results were acceptable.

- **Precision**

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike (MS)/matrix spike duplicate (MSD) results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed by the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. Samples results must be within RPD limits of +/-30%. If RPD values are out of specification and the sample

concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

All precision results were acceptable.

Field Duplicate Samples

No field duplicate were submitted for analysis

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQL's) to ensure that laboratory detection levels meet the required criteria. Twelve 2-butanone results exceeded the RQL. Under the WCH statement of work, no qualification is required. All other analyes met the RQL

- **Completeness**

Data package No. K1544 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to method blank contamination, the methylene chloride result in samples J18991, J18992, J189B5, J189B6, J189J9, J189K2, J189K4 and J189K5 were qualified as undetected and flagged "U".
- Due to an LCS (178%), matrix spike (198%) and matrix spike duplicate (193%) recovery outside QC limits, the acetone result in samples J189B6, J189K2 and J189K5 were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Twelve 2-butanone results exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the same quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzad for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

VOLATILE ORGANIC DATA QUALIFICATION SUMMARY*

SDG: K1544	**REVIEWER: ELR**	**Project: RCBRA**	**QC Issue**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Methylene chloride	U	J189B1, J189B2 J189B5, J189B6 J189J9, J189K2 J189K4, J189K5	Method blank contamination
Acetone	J	J189B6, J189K2 J189K5	LCS, MS and MSD recovery

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Case Narrative
REVISION

This narrative is issued to revise item 5, where matrix QC is associated with client SDG# K1543.

Client: WC-HANFORD RC-116
LVL #: 0902067
SDG/SAF # K1544 / RC-116

TW.O. #: 60049-001-001-0001-00
Date Received: 02-21-2009

GC/MS VOLATILE

Twenty-two (22) solid samples were collected on 02-19-2009

The samples and associated QC samples were analyzed according to criteria set forth in Lionville Laboratory SOPs based on Soil Method 5030A for TCE. Volatile target compounds on 02-24,25-2009.

The following is a summary of QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. Samples were analyzed within hold time.
2. Samples are reported on a "wet weight" basis.
3. Non-target compounds were not detected in these samples.
4. All surrogate recoveries were within acceptance criteria.
5. All matrix spike recoveries were within acceptance criteria. Matrix QC for preparation batch L903088 is associated with WCH SDG# K1543 (LVL# 0902061).
6. All blank spike recoveries were within acceptance criteria.
7. The method blanks contained the common laboratory contaminant Methylene Chloride at levels less than the CRQL.
8. Internal standard areas were outside QC limits for sample J189K5. Associated matrix spike analyses (J189K5MS) and J189K5MSD) fulfilled its reanalysis requirement.
9. Manual integrations are performed according to SOP QA-125 to produce quality data with utmost integrity. All manual integrations are required to be technically valid and properly documented. Appropriate technical flags are defined in the Glossary ("Technical Flags For Manual Integration").
10. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager

[illegible]

The results presented in this report relate only to the analytical testing and condition of the samples at receipt and during storage. All pages of this report are integral parts of the analytical data. Therefore, this report should only be reproduced in its entirety of 102 pages.

2

11 "I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

John Daniels

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Technical verification documentation present? .... Yes [✓ No] N/A

Comments:

2. INSTRUMENT TUNING AND CALIBRATION (Levels D and E)

GC/MS tuning/performance check acceptable? .... Yes No [✓ N/A]

Initial calibrations acceptable? .... Yes No [✓ N/A]

Continuing calibrations acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

Calculation check acceptable? .... Yes No [✓ N/A]

Comments:

GC/MS ORGANIC DATA VALIDATION CHECKLIST

3. BLANKS (Levels B, C, D, and E)

Calibration blanks analyzed? (Levels D, E) .... Yes No [✓ N/A]
Calibration blank results acceptable? (Levels D, E) .... Yes No [✓ N/A]
Laboratory blanks analyzed? .... [✓ Yes] No N/A
Laboratory blank results acceptable? .... Yes [✓ No] N/A
Field/trip blanks analyzed? (Levels C, D, E) .... [✓ Yes] No N/A
Field/trip blank results acceptable? (Levels C, D, E) .... [✓ Yes] No N/A
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: MB - 91, 92, B5, 06, J1, K2, K4, K5 - U [illegible]
~~(K4 - [illegible])~~
~~(K2 - K4 - [illegible] - RQC [illegible])~~

4. ACCURACY (Levels C, D, and E)

Surrogates/system monitoring compounds analyzed? .... [✓ Yes] No N/A
Surrogate/system monitoring compound recoveries acceptable? .... [✓ Yes] No N/A
Surrogates traceable? (Levels D, E) .... Yes No [✓ N/A]
Surrogates expired? (Levels D, E) .... Yes No [✓ N/A]
MS/MSD samples analyzed? .... [✓ Yes] No N/A
MS/MSD results acceptable? .... Yes [✓ No] N/A
MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]
MS/MSD standards? (Levels D, E) .... Yes No [✓ N/A]
LCS/BSS samples analyzed? .... [✓ Yes] No N/A
LCS/BSS results acceptable? .... Yes [✓ No] N/A
Standards traceable? (Levels D, E) .... Yes No [✓ N/A]
Standards expired? (Levels D, E) .... Yes No [✓ N/A]
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]
Performance audit sample(s) analyzed? .... Yes [✓ No] N/A
Performance audit sample results acceptable? .... Yes No [✓ N/A]

Comments: ~~B7 - C4 - no ms/msd - J only~~ 11/4/[illegible]

GC/MS ORGANIC DATA VALIDATION CHECKLIST

5. PRECISION (Levels C, D, and E)

MS/MSD samples analyzed? .... [✓ Yes] No N/A

MS/MSD RPD values acceptable? .... [✓ Yes] No N/A

MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]

Field duplicate RPD values acceptable? .... [✓ Yes] No N/A

Field split RPD values acceptable? .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: ~~[illegible]~~ MS/MSD – J [illegible] 7/2/06

6. SYSTEM PERFORMANCE (Levels D and E)

Internal standards analyzed? .... Yes No [✓ N/A]

Internal standard areas acceptable? .... Yes No [✓ N/A]

Internal standard retention times acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

Transcription/calculation errors? .... Yes No [✓ N/A]

Comments:

7. HOLDING TIMES (all levels)

Samples properly preserved? .... [✓ Yes] No N/A

Sample holding times acceptable? .... [✓ Yes] No N/A

Comments:

GC/MS ORGANIC DATA VALIDATION CHECKLIST

8. COMPOUND IDENTIFICATION, QUANTITATION, AND DETECTION LIMITS (all levels)

Compound identification acceptable? (Levels D, E) .... Yes No [✓ N/A]

Compound quantitation acceptable? (Levels D, E) .... Yes No [✓ N/A]

Results reported for all requested analyses? .... [✓ Yes] No N/A

Results supported in the raw data? (Levels D, E) .... Yes No [✓ N/A]

Samples properly prepared? (Levels D, E) .... Yes No [✓ N/A]

Laboratory properly identified and coded all TIC? (Levels D, E) .... Yes No [✓ N/A]

Detection limits meet RDL? .... Yes [✓ No] N/A

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments. [illegible] = [illegible]

9. SAMPLE CLEANUP (Levels D and E)

GPC cleanup performed? .... Yes No [✓ N/A]

GPC check performed? .... Yes No [✓ N/A]

GPC check recoveries acceptable? .... Yes No [✓ N/A]

GPC calibration performed? .... Yes No [✓ N/A]

GPC calibration check performed? .... Yes No [✓ N/A]

GPC calibration check retention times acceptable? .... Yes No [✓ N/A]

Check/calibration materials traceable? .... Yes No [✓ N/A]

Check/calibration materials Expired? .... Yes No [✓ N/A]

Analytical batch QC given similar cleanup? .... Yes No [✓ N/A]

Transcription/Calculation Errors? .... Yes No [✓ N/A]

Comments.

Subject: Metals - Data Package No. K1544-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1544 prepared by Lionville Laboratories Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analysis
J189D8	2/19/09	Solid	C	See note 1
J189F0	2/19/09	Solid	C	See note 1
J18985	2/19/09	Solid	C	See note 1
J18986	2/19/09	Solid	C	See note 1
J18987	2/19/09	Solid	C	See note 1
J18988	2/19/09	Solid	C	See note 1
J18990	2/19/09	Solid	C	See note 1
J18991	2/19/09	Solid	C	See note 1
J18992	2/19/09	Solid	C	See note 1
J189B5	2/19/09	Solid	C	See note 1

1 – ICP metals by 6010B and mercury by 7471A.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3 Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

Holding Times

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 6 months for ICP metals and 28 days for mercury.

All holding times were acceptable.

Preparation (Method) Blanks

Preparation Blanks

At least one preparation blank, consisting of deionized distilled water processed through each sample preparation and analysis procedure, must be prepared and analyzed with every sample delivery group. In the case of positive blank results, samples with digestate concentrations less than five times the preparation blank value have had their associated values qualified as non-detected and flagged "U". Samples with concentrations of greater than five times the highest blank concentration do not require qualification.

In the case of negative blank results, if the absolute value exceeds the contract required detection limit (CRDL), all nondetects are rejected and flagged "UR" and all detects that are less than ten times the absolute value of the associated preparation blank result are qualified as estimates and flagged "J". If the absolute value of the negative preparation blank is greater than the instrument detection limit (IDL) and less than or equal to the CRDL, all nondetects are qualified as estimates and flagged "UJ" and all detects less than ten times the absolute value of the blank are qualified as estimates and flagged "J". If the sample results are greater than ten times the absolute value of the preparation blank, no qualification is necessary.

Due to method blank contamination, the lead results in samples J189B8, J189B5, J189B7, J189B5, J189J9, J189K2 and J189K4 were qualified as undetected and flagged "UJ".

Due to method blank contamination, all tin results were qualified as undetected and flagged "UJ".

All other preparation blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

Accuracy

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR" Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

Due to matrix spike recoveries outside QC limits (52% & 53%), all antimony results were qualified as estimates and flagged "J".

Due to a matix spike recovery outside QC limits (20%), all phosphorous results in samples J189C1, J189C3, J189C4, J189J9, J189K2, J189K4 and J189K5 were qualified as estimates and flagged "J".

Due to an LCS recovery outside QC limits, all detected antimony (189% & 192%), arsenic (204% & 192%) , copper (710% & 648%), nickel (142% & 186%), thallium (0% & 0%), vanadium (162% & 164%) and zinc (683% & 605%) results in all samples were qualified as estimates and flagged "J".

Due to an LCS recovery outside QC limits, all detected tin (138%) results in samples J189D6, J189F0, J18985, J18986, J18987, J18988, J18990, J18991, J18992, J189B5, J189B6, J189B7, J189B8, J189B9 and J189C0 were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

· Precision

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

Due to an RPD outside QC limits (40%), the phosphorous result in samples J189C1, J189C3, J189C4, J189J9, J189K2, J189K4 and J189K5 were qualified as estimates and flagged "J"

All other laboratory duplicate results were acceptable.

Field Duplicate

No field duplicate were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the project RQLs to ensure that laboratory detection levels meet the required criteria. All results met the RQL.

- **Completeness**

Data package No. K1544 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to method blank contamination, the lead results in samples J189B8, J189B5, J189B7, J189B5, J189J9, J189K2 and J189K4 were qualified as undetected and flagged "UJ".
- Due to method blank contamination, all tin results were qualified as undetected and flagged "UJ".
- Due to matrix spike recoveries outside QC limits (52% & 53%), all antimony results were qualified as estimates and flagged "J".
- Due to a matix spike recovery outside QC limits (20%), all phosphorous results in samples J189C1, J189C3, J189C4, J189J9, J189K2, J189K4 and J189K5 were qualified as estimates and flagged "J".
- Due to an LCS recovery outside QC limits, all detected antimony (189% & 192%).

arsenic (204% & 192%) , copper (710% & 648%), nickel (142% & 186%), thallium (0% & 0%), vanadium (162% & 164%) and zinc (683% & 605%) results in all samples were qualified as estimates and flagged "J".

- Due to an LCS recovery outside QC limits, all detected tin (138%) results in samples J189D8, J189F0, J18985, J18986, J18987, J18988, J18990, J18991, J18992, J189B5, J189B6, J189B7, J189B8, J189B9 and J189C0 were qualified as estimates and flagged "J".

- Due to an RPD outside QC limits (40%), the phosphorous result in samples J189C1, J189C3, J189C4, J189J9, J189K2, J189K4 and J189K5 were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Case Narrative
REVISION

This narrative is issued to revise item 9, where matrix QC is associated with SDG# K1547.

Client: WC HANFORD RC-116 K1544
LVL#: 0902067

W.O.#: 60049-001-001-0001-00
Date Received: 02-21-09

METALS

The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below.

The sample was reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise.

1. This narrative covers the analyses of 22 soil samples. The sample results are reported on a wet weight "as-received" basis.

2. The samples were prepared and analyzed in accordance with methods checked on the attached glossary

3. All analyses were performed within the required holding times.

4. All Initial and Continuing Calibration Verifications (ICV/CCVs) were within the 90-110% control limits (80-120% for Mercury) with the exception of CCV4 for various analytes in file ICP0423B. L904078-BLK1 was surrounded by QC within control. L904078-SRM1 was rerun in file ICP0425B.

5. All Initial and Continuing Calibration Blanks (ICB/CCBs) were within control limits (less than the LOQ).

6. The preparation/method blank for 1 analyte was outside method criteria. (less than the Limit of Quantitation (3-10X the LOD), or samples greater than 20X MB value). Refer to the Inorganics Method Blank Data Summary

   a). The MB L904077 and L904078 results for Lead were *greater* than the Limit of Quantitation (LOQ) (3-10x the (LOD) Limit of Detection) and all samples, with the exception of samples J189D8 and J189B9, read less than 20 times the MB concentration. However, no corrective action criteria for MBs were provided in SW846 method 6010B. The sample results were reported herein "uncorrected" for the levels found in the MB.

7. All ICP Interference Check Standards were within control limits

84

2

8. All Standard Reference Material (SRM) analytes were within the Prediction Interval control limits with the exception of L904077-SRM1 for Copper (710%), Nickel (142%), and Zinc (683%), and L904078-SRM1 for Copper (648%), Nickel (186%), and Zinc (605%).

9. The matrix spike (MS) recoveries for 4 analytes were outside the 75-125% control limits. Matrix QC for preparation batch L904078 is associated with SDG# K1547 (LVL# 0902075).

10. For analytes where the ICP MS is out-of-control, a post-digestion MS (PDS) and serial dilution are performed. A PDS was prepared at meaningful concentration level for the following analytes:

Sample ID	Element	PDS Concentration (ppb)	PDS % Recovery
J189D8	Aluminum	20,000	92.5
	Antimony	100	96.9
	Iron	40,000	89.0
	Silicon	5,100	84.9

11. The duplicate analysis for 1 analyte was outside the 20% Relative Percent Difference (RPD) control limits.

12. For the purposes of this report, the data has been reported to the Limit of Detection (LOD). Values between the LOD and the Limit of Quantitation (LOQ) are acquired in a region of less-certain quantification.

13. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

14. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

LCS – Antimony – J   D8, B9 – J   vanadium – J all detects
LCS – arsenic – J all detects   zinc J all detects
LCS – Copper – J all detects
LCS – nickel – J all detects
LCS – thallium – J all

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

5. PRECISION (Levels C, D, and E)

Duplicate RPD values acceptable? .... Yes [✓ No] N/A
Duplicate results acceptable? .... Yes [✓ No] N/A
MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]
MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]
Field duplicate RPD values acceptable? .... Yes No [✓ N/A]
Field split RPD values acceptable? .... Yes No [✓ N/A]
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: phosphorus - 40% (S1-K5) - J

6. ICP QUALITY CONTROL (Levels D and E)

ICP serial dilution samples analyzed? .... Yes No [✓ N/A]
ICP serial dilution %D values acceptable? .... Yes No [✓ N/A]
ICP post digestion spike required? .... Yes No [✓ N/A]
ICP post digestion spike values acceptable? .... Yes No [✓ N/A]
Standards traceable? .... Yes No [✓ N/A]
Standards expired? .... Yes No [✓ N/A]
Transcription/calculation errors? .... Yes No [✓ N/A]
Comments:

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

7. FURNACE AA QUALITY CONTROL (Levels D and E)

Duplicate injections performed as required? .... Yes No [✓ N/A]

Duplicate injection %RSD values acceptable? .... Yes No [✓ N/A]

Analytical spikes performed as required? .... Yes No [✓ N/A]

Analytical spike recoveries acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

MSA performed as required? .... Yes No [✓ N/A]

MSA results acceptable? .... Yes No [✓ N/A]

Transcription/calculation errors? .... Yes No [✓ N/A]

Comments:

8. HOLDING TIMES (all levels)

Samples properly preserved? .... [✓ Yes] No N/A

Sample holding times acceptable? .... [✓ Yes] No N/A

Comments:

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

9. RESULT QUANTITATION AND DETECTION LIMITS (all levels)

Results reported for all requested analyses? .... [✓ Yes] No N/A

Results supported in the raw data? (Levels D, E) .... Yes No [✓ N/A]

Samples properly prepared? (Levels D, E) .... Yes No [✓ N/A]

Detection limits meet RDL? .... [✓ Yes] No N/A

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1544 prepared by Eberline Services (EB). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analysis
J189D8	2/19/09	Solid	C	See note 1
J189F0	2/19/09	Solid	C	See note 1
J18985	2/19/09	Solid	C	See note 1
J18986	2/19/09	Solid	C	See note 1

Appendix 6 Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 28 days for total organic carbon.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Method Blanks**

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

All accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicate

No field duplicates were submitted for analysis.

Analytical Detection Levels

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package No. K1544 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

None found.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the 134sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Date Received: 02-23-09

INORGANIC NARRATIVE

1. This narrative covers the analysis of 22 solid samples.

2. The samples were prepared and analyzed in accordance with the method indicated on the data summary report.

   Lionville Lab (LvL) is NELAP accredited by the State of Pennsylvania. For a complete list of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager. LvL certifies that all test results meet the requirements of NELAC with any exception noted in the following statements.

3. Sample holding times as required by the method and/or contract were met.

4. The results presented in this report are derived from samples that met LvL's sample acceptance policy.

5. The method blank was within the method criteria.

6. The Laboratory Control Sample (LCS) was within the laboratory control limits.

7. The matrix spike recovery was within the 75-125% control limits.

8. The replicate analysis was within the 20% Relative Percent Difference (RPD) control limit.

9. Total Organic Carbon samples are dried prior to analysis.

10. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard copy package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

Iain Daniels
Laboratory Manager
Lionville Laboratory

1 – Semivolatiles by 8270 & diesel range organics by 8015B.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below.

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY OBJECTIVES

- **Holding Times & Sample Preservation**

Analytical holding times were assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Samples must be extracted within 14 days of the date of sample collection and analyzed within 40 days from the date of extraction.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Method Blanks**

Method blank analyses are conducted to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. Analytical results for analytes present in any sample at less than five times the concentration of that analyte found in the associated blank are qualified as non-detects and flagged "U". Common laboratory contaminants present in samples at less than ten times the concentration of that analyte found in the associated blank are qualified as non-detects. If a sample result is less than the CRQL and is less than five times (or less than ten times for lab contaminants) the highest associated blank result, the sample result value is raised to the CRQL level and qualified as undetected "U".

Due to method blank contamination, all motor oil results were qualified as undetected and flagged "U".

All other method blank results were acceptable.

Field Blanks

No field blanks were submitted for analysis.

Accuracy

Matrix Spike/Matrix Spike Duplicate & Blank Spike Recoveries

Matrix spike/matrix spike duplicate analyses are used to assess the analytical accuracy of the reported data and the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike/matrix spike duplicate analyses are performed in duplicate using five compounds for which percent recoveries must be within a range of 50-150% or within laboratory control limits. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Undetected sample results with spike recoveries below control limits are qualified as estimates and flagged "UJ". Undetected sample results are not qualified if the spike recovery is above control limits. Sample results greater than five times the spike concentration require no qualification.

Due to the lack of a matrix spike, matrix spike duplicate and LCS analysis, all motor oil results were qualified as estimates and flagged "J".

Due to LCS (60%) and matrix spike (63%) recoveries outside QC limits, all diesel range organic results were qualified as estimates and flagged "J".

Due to matrix spike recoveries outside QC limits, all 4-chloroanaline (43%), hexachlorocyclopentadiene (27%) and pentachlorophenol (34%) results were qualified as estimates and flagged "J".

Due to a matrix spike duplicate recovery outside QC limits (36%), all hexachlorocyclopentadiene results were qualified as estimates and flagged "J".

Due to an LCS recovery outside QC limits, all 2,4-dimethylphenol (47%), 2,4-dinitrophenol (39%), 4-chloroanaline (45%), hexachlorocyclopentadiene (17%) and pentachlorophenol (46%) results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Surrogate Recovery

The analyses of surrogate compounds provide a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the EPA CLP program. If two surrogates of the same class of compounds (base/neutral or acid) are out of control limits, all associated sample results greater than the contract required quantitation limit (CRQL) are qualified as estimates and flagged "J". Sample results less than the CRQL and below the lower control limit are qualified as estimates and flagged "UJ". Sample results less than the CRQL with recoveries above the upper control limit require no qualification. If a surrogate recovery is less than 10%, detects are qualified as estimates and flagged "J" and nondetects are rejected and flagged "UR".

All surrogate results were acceptable.

- **Precision**

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike (MS)/matrix spike duplicate (MSD) results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed by the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. Samples results must be within RPD limits of +/-30%. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

Due to RPDs outside QC limits, all 1,2-dichlorobenzene (35%), 1,3-dichlorobenzene (78%), 1,4-dichlorobenzene (33%), 2,4,5-trichlorophenol (31%), 2,4,6-trichlorophenol (45%), 2,4-dichlorophenol (31%), 2,4-dinitrophenol (50%), 2-chlorophenol (42%), 2-methylphenol (41%), 3,3-dichlorobenzidine (32%), 4,6 dinitro-2-methylphenol (32%), 4-chloro-3-methylphenol (31%), 4-chloroanaline (36%), 4-methylphenol (44%), 4-nitrophenol (31%), bis(2-chloroethyl)ether (34%), bis(2-chloroisopropyl)ether (37%), hexachloroethane (39%), n-nitroso-n-propylamine (39%), pentachlorophenol (59%), phenathrene (35%) and phenol (43%) results were qualified as estimates and flagged "J"

Due to the lack of a matrix spike and matrix spike duplicate analysis, all motor oil results were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

No field duplicates were submitted for analysis

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQL's) to ensure that laboratory detection levels meet the required criteria. Five-hundred twelve semivolatile analytes exceeded the RQL. Under the WCH statement of work, no qualification is required. All other analytes met the RQL.

Completeness

Data package No K1544 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to method blank contamination, all motor oil results were qualified as undetected and flagged "U".
- Due to the lack of a matrix spike, matrix spike duplicate and LCS analysis, all motor oil results were qualified as estimates and flagged "J".
- Due to LCS (60%) and matrix spike (63%) recoveries outside QC limits, all diesel range organic results were qualified as estimates and flagged "J".
- Due to matrix spike recoveries outside QC limits, all 4-chloroanaline (43%), hexachlorocyclopentadiene (27%) and pentachlorophenol (34%) results were qualified as estimates and flagged "J".
- Due to a matrix spike duplicate recovery outside QC limits (36%), all hexachlorocyclopentadione results were qualified as estimates and flagged "J".
- Due to an LCS recovery outside QC limits, all 2,4-dimethylphenol (47%), 2,4-dinitrophenol (39%), 4-chloroanaline (45%), hexachlorocyclopentadiene (17%) and pentachlorophenol (46%) results were qualified as estimates and flagged "J".
- Due to RPDs outside QC limits, all 1,2-dichlorobenzene (35%), 1,3-dichlorobenzene (79%), 1,4-dichlorobenzene (33%), 2,4,5-trichlorophenol (31%), 2,4,6-trichlorophenol (45%), 2,4-dichlorophenol (31%), 2,4-dinitrophenol (50%), 2-chlorophenol (42%), 2-methylphenol (41%), 3,3-dichlorobenzidine (32%), 4,6-dinitro-2-methylphenol (32%), 4-chloro-3-methylphenol (31%), 4-chloroanaline (36%), 4-methylphenol (44%), 4 nitrophenol (31%), bis(2-chloroethyl)ether (34%), bis(2-chloroisopropyl)ether (37%), hexachloroethane (39%), n-nitroso-n-propylamine (39%), pentachlorophenol (59%), phenathrene (35%) and phenol (43%) results were qualified as estimates and flagged "J"

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Five-hundred twelve semivolatile analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the same quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

SEMIVOLATILE/DRO ORGANIC DATA QUALIFICATION SUMMARY*

SDG: K1640	REVIEWER: ELR	Project: RCBRA	QC Issue
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Motor oil	U	All	Method blank contamination
Motor oil	J	All	No MS, MSD or LCS analysis
Diesel range organics	J	All	LCS & MS recovery
4-chloroanaline hexachlorocyclopentadiene pentachlorophenol	J	All	MS recovery
hexachlorocyclopentadiene	J	All	MSD recovery
2,4-dimethylphenol 2,4-dinitrophenol 4-chloroanaline hexachlorocyclopentadiene pentachlorophenol	J	All	LCS recovery
1,2-dichlorobenzene 1,3-dichlorobenzene 1,4-dichlorobenzene 2,4,5-trichlorophenol 2,4,6-trichlorophenol 2,4-dichlorophenol 2,4-dinitrophenol 2-chlorophenol 2-methylphenol 3,3-dichlorobenzidine 4,6-dinitro-2-methylphenol 4-chloro-3-methylphenol 4-chloroanaline 4-methylphenol 4-nitrophenol bis(2-chloroethyl)ether bis(2-chloroisopropyl)ether hexachloroethane n-nitroso-n-propylamine pentachlorophenol phenathrene phenol	J	All	RPD

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Case Narrative

Client: WC-HANFORD RC-116
LVL #: 0902067
SDG# K1544 **SAF#** RC-116

W.O. #: 60049-001-001-0001-00
Date Received: 02-21-2009

SEMIVOLATILE

Twenty (20) solid samples were collected on 02-19-2009.

The samples and their associated QC samples were extracted according to Lionville Laboratory SOPs based on SW 846 method 3540C on 03-05-2009 and analyzed according to criteria set forth in Lionville Laboratory SOPs based on SW 846 Method 8270C for TCL Semivolatile target compounds on 03-26,27,28-2009.

All solid samples are reported on a wet weight basis. The following is a summary of QC results accompanying the sample results. Lionville Laboratory (LVL) certifies that all test results meet the requirements of NELAC except as noted below:

1. Discrepancies from the Sample acceptance policy have been recorded on the Sample Receipt Checklist.
2. Samples were extracted and analyzed within holding time.
3. Non-target compounds were detected in these samples.
4. The following samples required dilution due to matrix: Sample J189C0 required a 2-fold instrument dilution; and Samples J189B6, J189C1, J189C3, J189C4, J189J9, J189K2, and J189K5 required 3-fold instrument dilutions. Reporting limits have been adjusted to reflect the necessary dilutions.
5. Two (2) of one hundred forty-four (144) surrogate recoveries were outside acceptance criteria. However, surrogate acceptance criteria were met for sample L903038-MS1 (i.e., no more than one outlier per fraction (acid and base neutral) and no recoveries less than 10%). The surrogate recovery criteria were not met for sample J189C1. A copy of the Sample Discrepancy Report (SDR# 09MS079) has been enclosed.
6. Three (3) of one hundred twenty-eight (128) matrix spike recoveries were outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR# 09MS079) has been enclosed.
7. Six (6) of sixty-four (64) blank spike recoveries were outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR# 09MS079) has been enclosed.
8. The method blank was below the reporting limit for all target compounds.
9. All initial calibrations associated with this data set were within acceptance criteria.

[illegible]

The results presented in this report relate only to the analytical testing and conditions of the samples at receipt and during storage. All pages of this report are integral parts of the analytical data. Therefore, this report should only be reproduced in its entirety of 107 pages.

10 All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.

11. Internal standard area and retention time criteria were met.

12. Manual integrations are performed according to SOP QA-125 to produce quality data with the utmost integrity. All manual integrations are required to be technically valid and properly documented. Appropriate technical flags are defined in the Glossary ("Technical Flags For Manual Integration").

13. LVL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

14. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the Laboratory Manager or a designee as verified by the following signature.

Lionville Laboratory Sample Discrepancy Report (SDR)

SDR # 0910579

Initiator: [illegible]
Date: 9/1/09
Client: WA Hanford RL WL

Batch: 0901067
Samples: JT99C1 BS/MS/MSD
Method: [✓ SW846]/MCAWW/CLP

Parameter: [illegible]
Matrix: Solid
Prep Batch: 09J0339

1. Reason for SDR

a. COC Discrepancy

Tech Profile Error
Transcription Error
Client Request
Wrong Test Code
Sampler Error on C-O-C
Other

b. General Discrepancy

_ Missing Sample/Extract*
Hold Time Exceeded
Improper Bottle Type
Container Broken
Insufficient Sample*
Not Amenable to Analysis
_ Wrong Sample Pulled
Preservation Wrong
_ Label ID's Illegible
Received Past Hold

Note* Verified by [Log-in] or (Prep Group) (circle) signature/date

c. Problem (Include all relevant specific results; attach data if necessary)

(1) Low [illegible] Fluorophenol surrogate in sample JT99C1. All other surrogates within criteria (2) Several spike recoveries outside acceptance criteria in BS/MS/MSD.

2. Known or Probable Causes(s)

(1) Interferent eluting at same RT as surrogate (2) [illegible] that [illegible] decomposition in the gas chromatograph, [illegible] structures, [illegible] decomposition, other spikes. All surrogates within acceptance criteria.

3. Discussion and Proposed Action

Other Description: Narrate

_ Re-log
_ Entire Batch
_ Following Samples
Re-leach
_ Re-extract
_ Re-digest
Revise EDD
Change Test Code to
_ Place On/Take Off Hold (circle)

Case Narrative

Client: WC-HANFORD RC-116
LVL #: 0902067
SDG/SAF # K1544 / RC-116

W.O. #: 60049-001-001-0001-00
Date Received: 02-21-2009

DIESEL RANGE ORGANICS

Twenty (20) solid samples were collected on 02-19-2009.

The samples and their associated QC samples were extracted on 03-05-2009 and analyzed according to Lionville Laboratory SOPs based on SW846, 3rd Edition procedure on 03-13,14-2009. The extraction procedure was based on method 3540C and the extracts were analyzed based on method 8015B for DRO.

All soil samples are reported on a dry weight basis unless requested by the client, required by the method, or noted otherwise. The following is a summary of QC results accompanying the sample results. Lionville Laboratory Inc (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. All required holding time for extraction and analysis have been met.
2. The method blank contained Motor Oil Range Organics (MORO) at a level above the quantitation limit. Samples contain MORO in the range of 1 to 5 times the level in the blank. Although there is no client specified reporting limit, the blank result is above the normal quantitation limit, therefore all sample results should be considered as maximum values.
3. One (1) of twenty-four (24) surrogate recoveries was outside acceptance criteria. However, the surrogate acceptance criteria were met (i.e., no more than one outlier per sample).
4. All blank spike recoveries were within acceptance criteria.
5. All matrix spike recoveries were within acceptance criteria.
6. All initial calibrations associated with this data set were within acceptance criteria.
7. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.

8. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

9. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the laboratory Manager or a designee, as verified by the following signature.

Inin Daniels

Comments: ZZ out – J all

6. SYSTEM PERFORMANCE (Levels D and E)

Internal standards analyzed? .... Yes No [✓ N/A]

Internal standard areas acceptable? .... Yes No [✓ N/A]

Internal standard retention times acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

Transcription/calculation errors? .... Yes No [✓ N/A]

Comments:

7. HOLDING TIMES (all levels)

Samples properly preserved? .... [✓ Yes] No N/A

Sample holding times acceptable? .... [✓ Yes] No N/A

Comments:

GC/MS ORGANIC DATA VALIDATION CHECKLIST

8. COMPOUND IDENTIFICATION, QUANTITATION, AND DETECTION LIMITS (all levels)

Compound identification acceptable? (Levels D, E) .... Yes No [✓ N/A]
Compound quantitation acceptable? (Levels D, E) .... Yes No [✓ N/A]
Results reported for all requested analyses? .... [✓ Yes] No N/A
Results supported in the raw data? (Levels D, E) .... Yes No [✓ N/A]
Samples properly prepared? (Levels D, E) .... Yes No [✓ N/A]
Laboratory properly identified and coded all TIC? (Levels D, E) .... Yes No [✓ N/A]
Detection limits meet RDL? .... Yes [✓ No] N/A
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: S12 ent

9. SAMPLE CLEANUP (Levels D and E)

GPC cleanup performed? .... Yes No [✓ N/A]
GPC check performed? .... Yes No [✓ N/A]
GPC check recoveries acceptable? .... Yes No [✓ N/A]
GPC calibration performed? .... Yes No [✓ N/A]
GPC calibration check performed? .... Yes No [✓ N/A]
GPC calibration check retention times acceptable? .... Yes No [✓ N/A]
Check/calibration materials traceable? .... Yes No [✓ N/A]
Check/calibration materials Expired? .... Yes No [✓ N/A]
Analytical batch QC given similar cleanup? .... Yes No [✓ N/A]
Transcription/Calculation Errors? .... Yes No [✓ N/A]

Subject: Radiochemistry - Data Package No. K1544-EB

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1544 prepared by Eberline Services (EB). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Anaysis
J18985	2/19/09	Solid	C	See note 1
J18986	2/19/09	Solid	C	See note 1
J18987	2/19/09	Solid	C	See note 1

1 – Carbon-14, total strontium, technetium-99, alpha spectroscopy and gamma spectroscopy

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Holding times are calculated from Chain-of-Custody forms to determine the validity of the results. The maximum holding time for radiochemical analysis is 6 months.

All holding times were acceptable.

Preparation (Method) Blanks

Laboratory Blanks

Blank samples are analyzed to determine if positive results are due to laboratory reagent, sample container, or detector contamination. If blank analysis results indicate the presence of an analyte above the minimum detectable activity (MDA), the following qualifiers are applied: All positive sample results less than five times the highest blank concentration are qualified as estimates and flagged "J"; sample results below the MDA are qualified as undetected and flagged "U"; sample results above the MDA and greater than five times the highest blank concentration are not qualified.

All blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Accuracy is evaluated from laboratory control sample (LCS) or blank spike sample (BSS) batch samples and spiked samples from the analytical batch. Measured activities are compared to the known added amounts. The acceptable LCS or BSS and matrix spike (MS) recovery range is 70-130%. In addition, samples may be spiked with a radiochemical tracer to assist in isolating the radioisotope of interest with the yield of the tracer being used in calculating sample activity. The acceptable range for tracer recovery is 20% to 105%. Spike sample results outside the above ranges result in associated sample results being qualified as estimates, or not qualified, depending on the activity of the individual sample. Results are rejected for LCS/BSS recoveries of less than 30% and tracer recoveries of less than 20%, and tracer recoveries of greater than 115% for detected results.

Due to the lack of an LCS analysis, all thorium-228 (aspec) and thorium-232 (aspec) results were qualified as estimates and flagged "J".

Due to the lack of a matrix spike analysis, all carbon-14 results were qualified as estimates and flagged "J".

All other accuracy results were acceptable

Laboratory Duplicates

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the contract required detection limit (CRDL) and the RPD is less than 30%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

Due to an RPD outside QC limits (33%), all thorium-228 (gea) results in samples J18985, J18986, J18987, J18988, J18990, J18991, J18992, J189B5, J189B6, J189B7 and J189B8 were qualified as estimates and flagged "J".

All other duplicate results were acceptable.

Field Duplicates

No field duplicates were submitted for analysis.

- **Detection Levels**

Reported analytical detection levels for undetected analytes are compared against the project RQLs to ensure that laboratory detection levels meet the required criteria. One analyte exceeded the RQL. Under the WCH statement of work, no qualification is required. All other analytes met the RQL

- **Completeness**

Data package No. K1544 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found,

MINOR DEFICIENCIES

The following minor deficiency was noted:

- Due to the lack of an LCS analysis, all thorium-228 (aspec) and thorium-232 (aspec) results were qualified as estimates and flagged "J".
- Due to the lack of a matrix spike analysis, all carbon-14 results were qualified as estimates and flagged "J".
- Due to an RPD outside QC limits (33%), all thorium-228 (gea) results in samples J18985, J18986, J18987, J18988, J18990, J18991, J18992, J189B5, J189B6, J189B7 and J189B8 were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

One analyte exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH statement of work are as follows:

U - Indicates the compound or analyte was analyzed for and not detected above the minimum detectable activity (MDA) in the sample. The value reported is the sample result corrected for sample dilution and moisture content by the laboratory. The data is usable for decision making purposes

UJ - Indicates the compound or analyte was analyzed for and not detected at concentrations above the minimum detectable activity (MDA) in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate, but is usable for decision making purposes.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

Appendix 2

Summary of Data Qualification

RADIOCHEMISTRY DATA QUALIFICATION SUMMARY*

SDG: K1544	**REVIEWER:** **ELR**	**Project:** **RCBRA**	**QC Issue**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Thorium-228 Thorium-232	J	All	No LCS analysis
Carbon-14	J	All	No MS analysis RPD
Thorium-228 (gea)	J	J18985, J18986 J18987, J18988 J18990, J18991 J18992, J189B5 J189B6, J189B7 J189B8	

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Laboratory Narrative and Chain-of-Custody Documentation

Eberline Analytical
W.O. No. R9-02-077-7316

Washington Closure Hanford
SDG K1544

Case Narrative | **Page 1 of 1**

1.0 GENERAL

Washington Closure Hanford (WCH) Sample Delivery Group K1544 was composed of eleven solid (other solid) samples designated under SAF No. RC-116 with a Project Designation of: Columbia River Component of the RCBRA – Sediment.

The samples were received as stated on the Chain-of-Custody documents. Any discrepancies are noted on the Eberline Analytical Sample Receipt Checklist. The results were sent to WCH via e-mail April 9, 2009.

2.0 ANALYSIS NOTES

2.1 Carbon-14 Analysis

No problems were encountered during the course of the analyses.

2.2 Strontium-90 Analysis

No problems were encountered during the course of the analyses.

2.3 Technetium-99 Analysis

The Tc-99m tracer yield for sample J18985 was 109%, greater than the upper control limit of 105% but less than the absolute limit of 140%. No other problems were encountered during the course of the analyses.

2.4 Isotopic Thorium Analysis

No problems were encountered during the course of the analyses.

2.5 Isotopic Uranium Analysis

No problems were encountered during the course of the analyses.

2.6 Isotopic Plutonium Analysis

No problems were encountered during the course of the analyses.

2.7 Gamma Spectroscopy

No problems were encountered during the course of the analyses.

"I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data obtained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

1.0 GENERAL

Washington Closure Hanford (WCH) Sample Delivery Group K1544 was composed of eleven solid (other solid) samples designated under SAF No. RC-116 with a Project Designation of: Columbia River Component of the RCBRA - Sediment.

The samples were received as stated on the Chain-of-Custody documents. Any discrepancies are noted on the Eberline Analytical Sample Receipt Checklist. The results were sent to WCH via e-mail April 7, 2009.

2.0 ANALYSIS NOTES

2.1 Carbon-14 Analysis

No problems were encountered during the course of the analyses.

2.2 Strontium-90 Analysis

No problems were encountered during the course of the analyses.

2.3 Technetium-99 Analysis

The Tc-99m tracer yield for samples J189B9 (106%), J189C0 (106%), J189K2 (108%), the QC LCS (108%), the QC blank (110%) and the duplicate analysis of J189B9 (107%) were all greater than the upper control limit of 105%, but less than the absolute limit of 140%. No other problems were encountered during the course of the analyses.

2.4 Isotopic Thorium Analysis

No problems were encountered during the course of the analyses.

2.5 Isotopic Uranium Analysis

No problems were encountered during the course of the analyses.

2.6 Isotopic Plutonium Analysis

No problems were encountered during the course of the analyses.

2.7 Gamma Spectroscopy

No problems were encountered during the course of the analyses.

"I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data obtained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature."

Collector: Egg

Company Contact: JOAN KESSNER Telephone No. 375-4688

Project Coordinator: KESSNER, JH

Price Code: 9K

Data Turnaround: 45 Days

Project Designation: Columbia River Component of the RI/BRA - Sediment

Sampling Location: BL & SSD K1544 (73..)

SAF No.: RC-116

Ice Chest No.: WCH-08-025

Field Logbook No.: EL-1630-1

COA: RESCRC6520

Method of Shipment: FED EX

Shipped To: EBERLINE SERVICES LIONVILLE

Offsite Property No.: N/A

Bill of Lading/Air Bill No.: 797357529024

Spike recoveries acceptable? .... Yes No [✓ N/A]

Spike source traceable? (Levels D, E) .... Yes No [✓ N/A]

Spike source expired? Levels D, E) .... Yes No [✓ N/A]

Transcription/Calculation Errors? (Levels D, E) .... Yes No [✓ N/A]

Comments: C-14 - No MS

10. Duplicates (Levels C, D, E) ☐ N/A

Duplicates Analyzed at required frequency? [✓ Yes] No N/A

RPD Values Acceptable? Yes [✓ No] N/A

Transcription/Calculation Errors? (Levels D, E) Yes No [✓ N/A]

Comments:

th228 (gen) 32% – I (85-138)

11. Field QC Samples (Levels C, D E) ☐ N/A

Field duplicate sample(s) analyzed? Yes [✓ No] N/A

Field duplicate RPD values acceptable? Yes No [✓ N/A]

Field split sample(s) analyzed? Yes [✓ No] N/A

Field split RPD values acceptable? Yes No [✓ N/A]

Performance audit sample(s) analyzed? Yes [✓ No] N/A

Performance audit sample results acceptable? Yes No [✓ N/A]

Comments: no field QC

12. Holding Times (All levels)

Are sample holding times acceptable? [✓ Yes] No N/A

Comments:

13. Results and Detection Limits (All Levels) .... ☐ N/A

Results reported for all required sample analyses? .... [✓ Yes] No N/A
Results supported in raw data? (Levels D, E) .... Yes No [✓ N/A]
Results Acceptable? (Levels D, E) .... Yes No [✓ N/A]
Transcription/Calculation errors? (Levels D, E) .... Yes No [✓ N/A]
MDA's meet required detection limits? .... Yes [✓ No] N/A
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]
Comments: [illegible]

Date: 7 December 2009
To: Washington Closure Hanford (technical representative)
From: ELR Consultants
Project: Columbia River Component of the RCBRA - Sediment
Subject: PCB/Pesticide - Data Package No. K1544 LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1544 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analysis
J18985	2/19/09	Solid	C	See note 1
J18986	2/19/09	Solid	C	See note 1

J189K5	2/19/09	Solid	C	See note 1

1 - PCBs by 8082 and pesticides by 8081A

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the *Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River* (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY OBJECTIVES

· Holding Times & Sample Preservation

Sample data were assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be extracted within 14 days of the date of sample collection and analyzed within 40 days from the date of extraction.

If holding times are exceeded by less than or equal to twice times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detected sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

Method Blank

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation or analysis. At least one method blank analysis must be conducted for every 20 samples. Method blanks should not contain target compounds at a concentration greater than required quantitation limit (RQL). If target compounds are present, sample results less than five times the blank concentration are qualified as undetected and flagged "U". If the sample result is less than five times the blank concentration and less than RQL, the result is qualified as undetected and elevated to the RQL.

All method blank results were acceptable.

Field Blanks

No field blanks were submitted for analysis.

· Accuracy

Matrix Spike & Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 70% to 130%. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Non-detected sample results with spike recoveries outside control limits are qualified as estimates and flagged "UJ". Sample results greater than five times the spike concentration require no qualification.

Due to the lack of a matrix spike and matrix spike duplicate analysis, all toxaphene results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Surrogate Recovery

The analysis of surrogate compounds provides a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the laboratory. When a surrogate compound recovery is outside the control window, all positively identified target compounds associated with the unacceptable surrogate recoveries are qualified as estimates and flagged "J". Non-detected compounds with surrogate recoveries less than the lower control limit are qualified as having an estimated detection limit and flagged "UJ". Non-detected compounds with surrogate recoveries above the upper control limit require no qualification.

All surrogate results were acceptable.

- **Precision**

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike/matrix spike duplicate results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed as the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. For soil samples, results must be within RPD limits of plus/minus 30%. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required

Due to the lack of a matrix spike and matrix spike duplicate analysis, all toxaphene results were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

No field duplicates were submitted for analysis.

Analytical Detection Levels

Reported analytical detection levels are compared against the project specific RQLs to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL

Completeness

Data Package No. K1544 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found

MINOR DEFICIENCIES

The following minor deficiency was noted:

- Due to the lack of a matrix spike and matrix spike duplicate analysis, all toxaphene results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the procedures herein are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

PCB/PESTICIDE DATA QUALIFICATION SUMMARY*

SDG: K1544	**REVIEWER: ELR**	**Project: RCBRA**	**QC Issue**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Toxaphene	J	All	No MS, MSD or LCS analysis

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Laboratory Narrative and Chain-of-Custody Documentation

Case Narrative

Client: WC HANFORD RC 116
LVL #: 0902067
SDG/SAF # K1544 / RC-116

W.O. #: 60049-001-001-0001-00
Date Received: 02-21-2009

PCBs

Twenty (20) solid samples were collected on 02-19-2009.

The samples and associated QC samples were extracted on 03-04-2009 and analyzed according to Lionville Laboratory SOPs based on SW846, 3rd Edition procedure on 03-16,17-2009. The extraction procedure was based on method 3540C and the extracts were analyzed based on method 8082.

The following is a summary of the QC results accompanying the sample results. All solid samples are reported on a dry weight basis. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below:

1. All required holding times for extraction and analysis have been met.
2. The samples and their associated QC samples received Copper-Sulfur and Sulfuric Acid cleanups according to Lionville Laboratory SOPs based on SW846 methods 3660A and 3665A respectively.
3. The method blank was below the reporting limits for all target compounds.
4. All obtainable surrogate recoveries were within acceptance criteria.
5. All blank spike recoveries were within acceptance criteria.
6. All matrix spike recoveries were within acceptance criteria.
7. All initial calibrations associated with this data set were within acceptance criteria.
8. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.

9. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager

10. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the laboratory manager or a designee as verified by the following signature

CHLORINATED PESTICIDES

Twenty (20) solid samples were collected on 02-19-2009.

The samples and their associated QC samples were extracted on 03-04-2009 and analyzed according to Lionville Laboratory SOPs based on SW846, 3rd Edition procedure on 03-25,27,31-2009 and 04-03-2009. The extraction procedure was based on method 3540C and the extracts were analyzed based on method 8081A.

All soil samples are reported on a wet weight basis. The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvL) certifies that all test results meet the requirements of NELAC except as noted below;

1. All required holding times for extraction and analysis have been met.
2. The method blank was below the reporting limit for all target compounds.
3. All obtainable surrogate recoveries were within acceptance criteria.
4. All blank spike recoveries were within acceptance criteria.
5. Three (3) of forty (40) matrix spike recoveries were outside acceptance criteria. A copy of the Sample Discrepancy Report (SDR# 09GC078) has been enclosed.
6. All samples required between a 4-fold and 10-fold instrument dilution due to the matrix. Reporting limits have been adjusted to reflect the necessary dilutions.
7. All initial calibrations associated with this data set were within acceptance criteria.
8. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.

9. LvL is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

10. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Date

Lionville Laboratory Sample Discrepancy Report (SDR)

SDR #: 0960016

Initiator: Robert Carden
Date: 5/5/09
Client: [illegible]
Batch: 09RU07
Samples: 008
Method: [illegible]
Parameter: 8081A
Matrix: Solid
Prep Batch: L9020[illegible]

1. Reason for SDR

a. COC Discrepancy
- _ Tech Profile Error
- _ Transcription Error
- _ Client Request
- _ Wrong Test Code
- _ Sampler Error on C-O-C
- _ Other ____

b. General Discrepancy
- _ Missing Sample/Extract*
- _ Hold Time Exceeded
- _ Improper Bottle Type
- _ Container Broken
- _ Insufficient Sample*
- _ Not Amenable to Analysis
- _ Wrong Sample Pulled
- _ Preservation Wrong
- _ Label ID's Illegible
- _ Received Past Hold

Note* Verified by [Log-In] or [Prep Group] (circle) signature/date ____

c. Problem (Include all relevant specific results; attach data if necessary)

Several spike recoveries elevated in MS (beta-BHC, Endrin, Methoxychlor). Recoveries in BS/MSD within criteria

BS good.

2. Known or Probable Causes(s)

3. Discussion and Proposed Action
- _ Re-log
  - _ Entire Batch
  - _ Following Samples ____
- _ Re-leach
- _ Re-extract
- _ Re-digest
- _ Revise EDD
- _ Change Test Code to ____
- _ Place On/Take Off Hold (circle)

Other Description:

Narrate.

All samples are non detect so possible high bias has no impact on data. JD

4. Project Manager Instructions. signature/date JD 5/7
- ✓ Concur with Proposed Action
- _ Disagree with Proposed Action. See Instructions
- ✓ Include in Case Narrative
- _ Client Contacted.
  Date/Person ____ ____
- _ Add
- _ Cancel

5. Final Action signature/date 5/11/09
- ✓ Verified re-[log][leach][extract][digest][✓ Analysis] (circle)
- ✓ Included in Case Narrative
- _ Hard Copy COC Revised
- _ Electronic COC Revised
- _ EDD Corrections Completed

Other Explanation

When Final Action has been recorded, forward original to QA for diposition.

Route
- _ Lab Manager Daniels
- 1 Project Mgr (circle) [✓ Johnson] / Stone

Company Contact: JOAN KESSNER Telephone No.: 375-4688

Project Coordinator: KESSNER, JH

Price Code: 9K

Data Turnaround: 45 Days

Project Designation: Columbia River Component of the RCBRA - Sediment

Sampling Location: BIz 4 SSD

SAF No.: RC-116

Ice Chest No.: WCH-08-013, 027, 072

Field Logbook No.: EL-1641-01

COA: BESCRC6520

Method of Shipment: FED EX

Shipped To: LIONVILLE [✓ LIONVILLE] — EBERLINE SERVICES

Offsite Property No.: N/A

Bill of Lading/Air Bill No.: 796361208296

COMMENTS:

SDG J00565 **SAF-RC-114**

Date: 12 October 2009
To: Washington Closure Hanford Inc. (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA – Pore Water – Phase II
Subject: Wet Chemistry - Data Package No. J00565-TAL

INTRODUCTION

This memo presents the results of data validation on Data Package No. J00565 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J19512	8/30/09	Water	C	See note 1
J19514	8/30/09	Water	C	See note 1
J19518	8/30/09	Water	C	See note 1

1 = Chromium VI by 7196A.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 24 hours for chromium VI.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Method Blanks**

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 65% to 135%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 69% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 130% or less than 70% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 130% and a sample result less than the IDL, no qualification is required.

All accuracy results were acceptable.

Precision

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 35%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicate

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria All analytes met the RQL.

- **Completeness**

Data package J00565 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

None found.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Certificate of Analysis

Washington Hanford Closure
2620 Fermi Avenue
Richland, WA 99354

September 14, 2009

Attention: John Kessner

SAP Number : RC-114
Date SDG Closed : August 31, 2009
Number of Samples : Three (3)
Sample Type : Water
SDG Number : J00565
Data Deliverable : 15-Day / Summary

CASE NARRATIVE

I. Introduction

On August 31, 2009 three water samples were received at TestAmerica for chemistry analysis. Upon receipt, the sample was assigned the following laboratory ID number to correspond with the Washington Closure Hanford (WCH) specific ID:

WCH ID#	TARL ID#	MATRIX	DATE OF RECEIPT
J19514	LJ3XX	WATER	8/31/09
J19512	LJ3X1	WATER	8/31/09
J19518	LJ3X8	WATER	8/31/09

II. Sample Receipt

The sample was received in good condition. There was approximately 150ml of water received for sample J19512 and approximately 100ml of water received for sample J19514. The client was notified by email on 9/1/09. The turn around time was changed from 7 days to 15 days per clients instructions on 8/31/09 phone call. No other anomalies were noted during check-in.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

The requested analyses were:

Chemical Analysis
Hexavalent Chromium by EPA method 7196A

IV. Quality Control

The analytical results for each analysis performed includes a minimum of one laboratory control sample (LCS), one method (reagent) blank, and one duplicate sample analysis. Any exceptions have been noted in the "Comments" section.

QC and sample results are reported in the same units.

V. Comments

Chemical Analysis
Hexavalent Chromium by EPA method 7196A:
The LCS, batch blank, sample, sample duplicate (J19518), sample matrix spike (J19518) and sample matrix spike duplicate (J19518) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature

INTRODUCTION

This memo presents the results of data validation on Data Package No. J00585 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J193H8	9/9/09	Water	C	See note 1
J193H9	9/9/09	Water	C	See note 1
J19588	9/8/09	Water	C	See note 1
J19592	9/8/09	Water	C	See note 1
J19595	9/8/09	Water	C	See note 1
J19596	9/17/09	Water	C	See note 1
J19597	9/20/09	Water	C	See note 1
J19598	9/17/09	Water	C	See note 1
J19599	9/20/09	Water	C	See note 1

1 – Total uranium.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2 Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Holding times are calculated from Chain-of-Custody forms to determine the validity of the results. The maximum holding time for radiochemical analysis is 6 months.

All holding times were acceptable.

- **Preparation (Method) Blanks**

Laboratory Blanks

Blank samples are analyzed to determine if positive results are due to laboratory reagent, sample container, or detector contamination. If blank analysis results indicate the presence of an analyte above the minimum detectable activity (MDA), the following qualifiers are applied: All positive sample results less than five times the highest blank concentration are qualified as estimates and flagged "J"; sample results below the MDA are qualified as undetected and flagged "U"; sample results above the MDA and greater than five times the highest blank concentration are not qualified.

All laboratory blank results were acceptable.

Field (Equipment) Blank

No equipment blanks were submitted for analysis.

- **Accuracy**

Accuracy is evaluated from laboratory control sample (LCS) or blank spike sample (BSS) batch samples and spiked samples from the analytical batch. Measured activities are compared to the known added amounts. The acceptable LCS or BSS and matrix spike (MS) recovery range is 65-135%. In addition, samples may be spiked with a radiochemical tracer to assist in isolating the radioisotope of interest with the yield of the tracer being used in calculating sample activity. The acceptable range for tracer recovery is 20% to 105%. Spike sample results outside the above ranges result in associated sample results being qualified as estimates, or not qualified, depending on the activity of the individual sample. Results are rejected for LCS/BSS recoveries of less than 30% and tracer recoveries of less than 20%, and tracer recoveries of greater than 115% for detected results.

All accuracy results were acceptable.

- **Laboratory Duplicates**

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the contract required detection limit (CRDL) and the RPD is less than 35%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All duplicate results were acceptable.

Field Duplicates

No field duplicates were submitted for analysis.

- **Detection Levels**

Reported analytical detection levels for undetected analytes are compared against the project RQLs to ensure that laboratory detection levels meet the required criteria. No RQLs were specified.

- **Completeness**

Data package No. J00585 was submitted for validation and verified for completeness Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

None found.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH statement of work are as follows:

U - Indicates the compound or analyte was analyzed for and not detected above the minimum detectable activity (MDA) in the sample. The value reported is the sample result corrected for sample dilution and moisture content by the laboratory. The data is usable for decision making purposes.

UJ - Indicates the compound or analyte was analyzed for and not detected at concentrations above the minimum detectable activity (MDA) in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate, but is usable for decision making purposes.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

Appendix 2

Summary of Data Qualification

RADIOCHEMISTRY DATA QUALIFICATION SUMMARY*

THE LEADER IN ENVIRONMENTAL TESTING

Certificate of Analysis

TestAmerica Laboratories, Inc.

Washington Hanford Closure
2620 Fermi Avenue
Richland, WA 99354

September 30, 2009

Attention: Joan Kessner

SAF Number : RC-114
Date SDG Closed : September 24, 2009
Number of Samples : Nine (9)
Sample Type : Water
SDG Number : J00585
Data Deliverable : 7-Day / Summary

CASE NARRATIVE

I. Introduction

On September 24, 2009 nine water samples were received at TestAmerica for radiochemical analysis. Upon receipt, the samples were assigned the following laboratory ID number to correspond with the Washington Closure Hanford (WCH) specific ID:

WCH ID#	TARL ID#	MATRIX	DATE OF RECEIPT
J193H8	LLE44	WATER	9/24/09
J193H9	LLE5F	WATER	9/24/09
J19588	LLE5P	WATER	9/24/09
J19592	LLE54	WATER	9/24/09
J19595	LLE6B	WATER	9/24/09
J19596	LLE6Q	WATER	9/24/09
J19597	LLE62	WATER	9/24/09
J19598	LLE65	WATER	9/24/09
J19599	LLE67	WATER	9/24/09

II. Sample Receipt

The samples were received in good condition and no anomalies were noted during check-in. TestAmerica was instructed by the client on 9/16/09 that all RC-114 samples received between 9/14/09 and 9/25/09 had a seven day turn around time. The turn around times on the chain of custodies were to be ignored.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

The requested analyses were:

Laser Induced Phosphorimetry
Total Uranium by method RL-KPA-003 (RICH-RC-5058)*

*SOP ID's changed effective 7-01-2008. Attached is a cross reference until SOP ID's are changed in all systems.

IV. Quality Control

The analytical results for each analysis performed includes a minimum of one laboratory control sample (LCS), one method (reagent) blank, and one duplicate sample analysis. Any exceptions have been noted in the "Comments" section.

QC and sample results are reported in the same units.

V. Comments

Total Uranium
Total Uranium by method RL-KPA-003 (RICH-RC-5058):
The LCS, batch blank, samples, sample duplicate (J193H8), and sample matrix spike (J193H9) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

COMMENTS:

SDG J00601 **SAF-RC-114**

Date: 9 November 2009
To: Washington Closure Hanford Inc. (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA – Pore Water – Phase II
Subject: Wet Chemistry - Data Package No. J00601-TAL

INTRODUCTION

This memo presents the results of data validation on Data Package No. J00601 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J19387	10/8/09	Water	C	See note 1
J19426	10/8/09	Water	C	See note 1
J195K2	10/8/09	Water	C	See note 1

1 – Chromium VI by 7196A

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

Holding Times

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 24 hours for chromium VI.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

Method Blanks

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 80% to 120%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 79% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 120% or less than 80% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 120% and a sample result less than the IDL, no qualification is required.

All accuracy results were acceptable

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 20%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

Due to an RPD outside QC limits (157%), all chromium VI results were qualified as estimates and flagged "J".

All other laboratory duplicate results were acceptable.

Field Duplicate

One set of field duplicates (J19397/J19426) were submitted for analysis. Field blanks are compared using the same criteria as for laboratory duplicates. Under the WCH statement of work, no qualification is required.

Analytical Detection Levels

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

Completeness

Data package J00601 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected) The completion percentage was 100%

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to an RPD outside QC limits (157%), all chromium VI results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

THE LEADER IN ENVIRONMENTAL TESTING

Certificate of Analysis

Washington Hanford Closure
2620 Fermi Avenue
Richland, WA 99354

October 23, 2009

Attention: Joan Kessner

SAF Number	:	RC 114
Date SDG Closed	:	October 9, 2009
Number of Samples	:	Three (3)
Sample Type	:	Water
SDG Number	:	J00601
Data Deliverable	:	15-Day / Summary

CASE NARRATIVE

I. Introduction

On October 9, 2009 three water samples were received at TestAmerica for radiochemistry and chemistry analysis. Upon receipt, the samples were assigned the following laboratory ID number to correspond with the Washington Closure Hanford (WCH) specific ID:

WCH ID#	TARL ID#	MATRIX	DATE OF RECEIPT
J19397	LL963	WATER	10/9/09
J19561	LL968	WATER	10/9/09
J195K2	LL97E	WATER	10/9/09

II. Sample Receipt

The samples were received in good condition and no anomalies were noted during check-in. The client called on September 30, 2009 and instructed TestAmerica to assign a 15 day turn around time to all RC-114 samples received on 10/1/09 or later.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

The requested analyses were:

Gas Proportional Counting
Strontium-90 by method RL-GPC-003 (RICH-RC-5006)*
Chemical Analysis
Hexavalent Chromium by EPA method 7196A

IV. Quality Control

The analytical results for each analysis performed includes a minimum of one laboratory control sample (LCS), one method (reagent) blank, and one duplicate sample analysis. Any exceptions have been noted in the "Comments" section.

QC and sample results are reported in the same units.

V. Comments

Gas Proportional Counting
Strontium-90 by method RL-GPC-003 (RICH-RC-5006):
The sample and sample duplicate were recounted to verify activity. The LCS, batch blank, samples and sample duplicate (J195K2) results are within contractual requirements.

Chemical Analysis
Hexavalent Chromium by EPA method 7196A:
Samples J19397, J19426, J195K2, J19397 MS, J19397 MSD and J19397 DUP were analyzed with a 50ml aliquot due to insufficient sample volume.

Sample J19397 and J19397 DUP did not meet the criteria for the RPD. Suspect that the sample wasn't completely homogenous.

Except as noted, the LCS, batch blank, sample, sample duplicate (J19347), sample matrix spike (J19397) and sample matrix spike duplicate (J19397) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

Reviewed and approved,

Additional Documentation Requested by Client

Date: 9 November 2009
To: Washington Closure Hanford Inc. (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA – Pore Water – Phase II
Subject: Radiochemistry - Data Package No. J00601-TAL

INTRODUCTION

This memo presents the results of data validation on Data Package No. J00601 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J195K2	10/8/09	Water	C	Strontium-90

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Holding times are calculated from Chain-of-Custody forms to determine the validity of the results. The maximum holding time for radiochemical analysis is 6 months.

All holding times were acceptable.

- **Preparation (Method) Blanks**

Laboratory Blanks

Blank samples are analyzed to determine if positive results are due to laboratory reagent, sample container, or detector contamination. If blank analysis results indicate the presence of an analyte above the minimum detectable activity (MDA), the following qualifiers are applied. All positive sample results less than five times the highest blank concentration are qualified as estimates and flagged "J"; sample results below the MDA are qualified as undetected and flagged "U"; sample results above the MDA and greater than five times the highest blank concentration are not qualified.

All laboratory blank results were acceptable.

Field (Equipment) Blank

No equipment blanks were submitted for analysis.

- **Accuracy**

Accuracy is evaluated from laboratory control sample (LCS) or blank spike sample (BSS) batch samples and spiked samples from the analytical batch. Measured activities are compared to the known added amounts. The acceptable LCS or BSS and matrix spike (MS) recovery range is 65-135%. In addition, samples may be spiked with a radiochemical tracer to assist in isolating the radioisotope of interest with the yield of the tracer being used in calculating sample activity. The acceptable range for tracer recovery is 20% to 105%. Spike sample results outside the above ranges result in associated sample results being qualified as estimates, or not qualified, depending on the activity of the individual sample. Results are rejected for LCS/BSS recoveries of less than 30% and tracer recoveries of less than 20%, and tracer recoveries of greater than 115% for detected results.

All accuracy results were acceptable.

- **Laboratory Duplicates**

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the contract required detection limit (CRDL) and the RPD is less than 35%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.
All duplicate results were acceptable.

Field Duplicates

No field duplicates were submitted for analyis.

Detection Levels

Reported analytical detection levels for undetected analytes are compared against the project RQLs to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

Completeness

Data package No. J00601 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

None found

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH statement of work are as follows:

U - Indicates the compound or analyte was analyzed for and not detected above the minimum detectable activity (MDA) in the sample. The value reported is the sample result corrected for sample dilution and moisture content by the laboratory. The data is usable for decision making purposes.

UJ - Indicates the compound or analyte was analyzed for and not detected at concentrations above the minimum detectable activity (MDA) in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate, but is usable for decision making purposes.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

J195K2	LL97E	WATER	10/9/09

II. Sample Receipt

The samples were received in good condition and no anomalies were noted during check-in. The client called on September 30, 2009 and instructed TestAmerica to assign a 15 day turn around time to all RC-114 samples received on 10/1/09 or later.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

The requested analyses were:

Gas Proportional Counting
Strontium-90 by method RL-GPC-003 (RICH-RC-5006)*
Chemical Analysis
Hexavalent Chromium by EPA method 7196A

IV. Quality Control

The analytical results for each analysis performed includes a minimum of one laboratory control sample (LCS), one method (reagent) blank, and one duplicate sample analysis. Any exceptions have been noted in the "Comments" section.

QC and sample results are reported in the same units.

V. Comments

Gas Proportional Counting
Strontium-90 by method RL-GPC-003 (RICH-RC-5006):
The sample and sample duplicate were recounted to verify activity. The LCS, batch blank, samples and sample duplicate (J195K2) results are within contractual requirements.

Chemical Analysis
Hexavalent Chromium by EPA method 7196A:
Samples J19397, J19426, J195K2, J19397 MS, J19397 MSD and J19397 DUP were analyzed with a 50ml aliquot due to insufficient sample volume.

Sample J19397 and J19397 DUP did not meet the criteria for the RPD. Suspect that the sample wasn't completely homogenous.

Except as noted, the LCS, batch blank, sample, sample duplicate (J19397), sample matrix spike (J19397) and sample matrix spike duplicate (J19397) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

Project: Columbia River Component of the RCBRA – Pore Water – Phase II
Subject: Wet Chemistry - Data Package No. J00603-TAL

INTRODUCTION

This memo presents the results of data validation on Data Package No. J00603 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J19381	10/12/09	Water	C	See note 1
J19419	10/12/09	Water	C	See note 1
J19526	10/12/09	Water	C	See note 1
J195D6	10/12/09	Water	C	See note 1
J195D7	10/12/09	Water	C	See note 1
J195D8	10/12/09	Water	C	See note 1

1 – Chromium VI by 7196A.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2 Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

Holding Times

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 24 hours for chromium VI.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Method Blanks**

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 80% to 120%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 79% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 120% or less than 80% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 120% and a sample result less than the IDL, no qualification is required.

All accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 20%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If

the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicate

One set of field duplicates (J19381/J19419) were submitted for analysis. Field blanks are compared using the same criteria as for laboratory duplicates. Under the WCH statement of work, no qualification is required.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package J00603 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

None found

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

THE LEADER IN ENVIRONMENTAL TESTING

Certificate of Analysis

Washington Hanford Closure
2620 Fermi Avenue
Richland, WA 99354

October 26, 2009

Attention: Joan Kessner

SAF Number	:	RC-114
Date SDG Closed	:	October 12, 2009
Number of Samples	:	Six (6)
Sample Type	:	Water
SDG Number	:	J00603
Data Deliverable	:	15-Day / Summary

CASE NARRATIVE

I. Introduction

On October 12, 2009 six water samples were received at TestAmerica for chemistry analysis. Upon receipt, the samples were assigned the following laboratory ID number to correspond with the Washington Closure Hanford (WCH) specific ID:

WCH ID#	TARL ID#	MATRIX	DATE OF RECEIPT
J19381	LMFN9	WATER	10/12/09
J19419	LMFPA	WATER	10/12/09
J19526	LMFPF	WATER	10/12/09
J195D6	LMFPK	WATER	10/12/09
J195D7	LMFPP	WATER	10/12/09
J195D8	LMFPQ	WATER	10/12/09

II. Sample Receipt

The samples were received in good condition and no anomalies were noted during check-in. The client called on September 30, 2009 and instructed TestAmerica to assign a 15 day turn around time to all RC-114 samples received on 10/1/09 or later.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

The requested analyses were:

Chemical Analysis
Hexavalent Chromium by EPA method 7196A

IV. Quality Control

The analytical results for each analysis performed includes a minimum of one laboratory control sample (LCS), one method (reagent) blank, and one duplicate sample analysis. Any exceptions have been noted in the "Comments" section.

QC and sample results are reported in the same units.

V. Comments

Chemical Analysis
Hexavalent Chromium by EPA method 7196A:
The samples were analyzed with a 50ml aliquot due to insufficient sample volume.

The LCS, batch blank, sample, sample duplicate (J195D6), sample matrix spike (J195D6) and sample matrix spike duplicate (J195D6) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

SDG J00607 **SAF-RC-114**

Date: 30 November 2009
To: Washington Closure Hanford Inc. (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA – Pore Water – Phase II
Subject: Wet Chemistry - Data Package No. J00607-TAL

INTRODUCTION

This memo presents the results of data validation on Data Package No. J00607 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J19369	10/14/09	Water	C	See note 1
J19370	10/14/09	Water	C	See note 1

1 – IC anions by 300.0

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

Holding Times

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 28 days for chloride, fluoride, bromide and sulfate and within 48 hours for nitrate, nitrite and orthophosphate.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR"

Due to the holding time being exceeded by less than twice the limit, all nitrate, nitrite and orthophosphate results were qualified as estimates and flagged "J".

All other holding times were acceptable.

- **Method Blanks**

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 80% to 120%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 79% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 120% or less than 80% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 120% and a sample result less than the IDL, no qualification is required.

All accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 20%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If

the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All precision results were acceptable.

Field Duplicate

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package J00607 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e , not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiency was noted:

- Due to the holding time being exceeded by less than twice the limit, all nitrate, nitrite and orthophosphate results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

WET CHEMISTRY DATA QUALIFICATION SUMMARY*

SDG: J00607	**REVIEWER: ELR**	**Project: RCBRA**	**PAGE 1 OF 1**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Nitrate Nitrite Orthophosphate	J	All	Hold time exceeded

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Appendix 4

Laboratory Narrative and Chain-of-Custody Documentation

CASE NARRATIVE
J00607 / RC-114 / D9J160184
Rev01

The following report contains the analytical results for two water samples submitted to TestAmerica by Washington Closure Hanford. The samples were received October 16, 2009, according to documented sample acceptance procedures.

Client ID	Lab ID	Analyses Requested	Analyses Performed
J19369	D9J160184-001	300.0/6010	300.0A/6010B/6020
J19370	D9J160184-002	300.0/6010	300.0A/6010B/6020

Dilution factors and qualifiers are provided to assist in the interpretation of the results. In some cases, due to interferences or analytes present above the linear calibration curve, samples must be analyzed at a dilution. For samples analyzed at a dilution, the reporting limits are adjusted relative to the dilution required. Dilutions made for reasons other than the presence of target compounds are addressed in the Supplemental QC Information section.

This report includes reporting limits (RLs) less than TestAmerica Denver's practical quantitation limits. These reporting limits are being used specifically at the client's request to meet the needs of this project. Please note that data are not normally reported to these levels without qualification, since they are inherently less reliable and potentially less defensible than required by the current NELAC standards. Please note that Non-Detect (U) results have been evaluated down to the Method Detection Limit (MDL) and should be considered Non-Detect (U) at the MDL.

TestAmerica utilizes USEPA approved methods in all analytical work. The results apply only to the samples included in this report and meet all requirements of NELAC. All data have been reviewed for compliance with the laboratory QA/QC plan and have been found to be compliant with laboratory protocols, with the exception of any items noted below.

SUPPLEMENTAL QC INFORMATION

Sample Receipt

Samples were received in good condition at a temperature of 3.6°C. No anomalies were encountered during sample receipt.

As instructed by the client on October 21, 2009, samples J19369 and J19370 were logged for Bromide, Chloride, Fluoride, Nitrite as N, ortho-Phosphate as P, and Sulfate analyses, in addition to the Nitrate as N analysis requested on the chains-of-custody.

Total Metals – SW846 6010B/6020

Serial dilution of a digestate in analytical batch 9292449 indicates that physical and chemical interferences are present for Aluminum and Sodium. Results in the analytical report have been flagged with an "L".

Low levels of Sodium and Boron are present in the method blank associated with QC batch 9292449. Because the concentrations in the method blank are not present at levels greater than the reporting limits, corrective action is deemed unnecessary.

Aluminum was recovered outside the QC control limits in the Matrix Spike performed on sample J19369. There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

Total Metals – SW846 6010B/6020 (cont.)

The percent recovery was not calculated for Iron in the Matrix Spike performed on sample J19369, due to the sample concentration reading greater than four times the spike amount. The acceptable LCS analysis data indicated that the analytical system was operating within control.

The duplicate analysis of sample J19369 exhibited RPD data outside the QC control limits for Barium. It can be noted that the RPD was calculated based on a value below the method detection limit, and as such, could not be reliably calculated.

No other anomalies were encountered.

Wet Chemistry – MCAWW 300.0A

The Nitrate as N, Nitrite as N, and ortho-Phosphate as P analyses for samples J19369 and J19370 were performed 30 minutes to 3 hours outside the 48 hour recommended sample holding times. The samples were received at the laboratory with insufficient time remaining for the laboratory to perform the analyses within the recommended holding times. It is TestAmerica's policy to analyze all samples within holding times; however, the laboratory cannot guarantee that hold times will be met when samples are received with less than half the hold time remaining. The client was notified on October 19, 2009.

It can be noted that the recovery for the Sulfate Matrix Spike performed on sample J19369 is within QC control limits; however, the value is estimated as the concentration exceeded the calibration range.

No other anomalies were encountered.

Revisions – 11/3/09

The revisions included in this report are as follows:

1. Total Metals – SW846 6010B: As requested by the client on November 2, 2009, Arsenic, Selenium, Lead and Boron results have been reported, in addition to the Client List of ICP Metals requested on the chains-of-custody.

I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Technical verification documentation present? .... Yes [✓ No] N/A

Comments:

2. INSTRUMENT PERFORMANCE AND CALIBRATIONS (Levels D and E)

Initial calibrations performed on all instruments? .... Yes No [✓ N/A]

Initial calibrations acceptable? .... Yes No [✓ N/A]

ICV and CCV checks performed on all instruments? .... Yes No [✓ N/A]

ICV and CCV checks acceptable? .... Yes No [✓ N/A]

Standards traceable? .... Yes No [✓ N/A]

Standards expired? .... Yes No [✓ N/A]

Calculation check acceptable? .... Yes No [✓ N/A]

Comments:

GENERAL CHEMISTRY ANALYSIS DATA VALIDATION CHECKLIST

3. BLANKS (Levels B, C, D, and E)

ICB and CCB checks performed for all applicable analyses? (Levels D, E) .... Yes No [✓ N/A]
ICB and CCB results acceptable? (Levels D, E) .... Yes No [✓ N/A]
Laboratory blanks analyzed? .... [✓ Yes] No N/A
Laboratory blank results acceptable? .... [✓ Yes] No N/A
Field blanks analyzed? (Levels C, D, E) .... Yes [✓ No] N/A
Field blank results acceptable? (Levels C, D, E) .... Yes No [✓ N/A]
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]
Comments: NO FB

4. ACCURACY (Levels C, D, and E)

Spike samples analyzed? .... [✓ Yes] No N/A
Spike recoveries acceptable? .... [✓ Yes] No N/A
Sike standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]
Spike standards expired? (Levels D, E) .... Yes No [✓ N/A]
LCS/BSS samples analyzed? .... [✓ Yes] No N/A
LCS/BSS results acceptable? .... [✓ Yes] No N/A
Standards traceable? (Levels D, E) .... Yes No [✓ N/A]
Standards expired? (Levels D, E) .... Yes No [✓ N/A]
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]
Performance audit sample(s) analyzed? .... Yes [✓ No] N/A
Performance audit sample results acceptable? .... Yes No [✓ N/A]
Comments: NO PAS

GENERAL CHEMISTRY ANALYSIS DATA VALIDATION CHECKLIST

5. PRECISION (Levels C, D, and E)

Duplicate RPD values acceptable? .... [✓ Yes] No N/A

Duplicate results acceptable? .... [✓ Yes] No N/A

MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]

MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]

Field duplicate RPD values acceptable? .... Yes No [✓ N/A]

Field split RPD values acceptable? .... Yes No [✓ N/A]

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments:

6. HOLDING TIMES (all levels)

Samples properly preserved? .... [✓ Yes] No N/A

Sample holding times acceptable? .... Yes [✓ No] N/A

Comments: Nitrate, nitrite + phosphate < 24 HT -[illegible]

GENERAL CHEMISTRY ANALYSIS DATA VALIDATION CHECKLIST

7. RESULT QUANTITATION AND DETECTION LIMITS (all levels)

Results reported for all requested analyses? .... [✓ Yes] No N/A

Results supported in the raw data? (Levels D, E) .... Yes No [✓ N/A]

Samples properly prepared? (Levels D, E) .... Yes No [✓ N/A]

Detection limits meet RDL? .... [✓ Yes] No N/A

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Date: 30 November 2009
To: Washington Closure Hanford Inc. (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA – Pore Water – Phase II
Subject: Metals - Data Package No. J00607-TAL

INTRODUCTION

This memo presents the results of data validation on Data Package No. J00607 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J19369	10/14/09	Water	C	See note 1
J19370	10/14/09	Water	C	See note 1

1 - ICP metals (6010B) and mercury (7471A).

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 28 days for mercury and 6 months for ICP metals.

All holding times were acceptable.

- **Preparation (Method) Blanks**

Preparation Blanks

At least one preparation blank, consisting of deionized distilled water processed through each sample preparation and analysis procedure, must be prepared and analyzed with every sample delivery group. In the case of positive blank results, samples with digestate concentrations less than five times the preparation blank value have had their associated values qualified as non-detected and flagged "UJ". Samples with concentrations of greater than five times the highest blank concentration do not require qualification.

In the case of negative blank results, if the absolute value exceeds the contract required detection limit (CRDL), all nondetects are rejected and flagged "UR" and all detects that are less than ten times the absolute value of the associated preparation blank result are qualified as estimates and flagged "J". If the absolute value of the negative preparation blank is greater than the instrument detection limit (IDL) and less than or equal to the CRDL, all nondetects are qualified as estimates and flagged "UJ" and all detects less than ten times the absolute value of the blank are qualified as estimates and flagged "J". If the sample results are greater than ten times the absolute value of the preparation blank, no qualification is necessary.

All preparation blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 80% to 120%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 79% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 120% or less than 80% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 120% and a sample result less than the IDL, no qualification is required.

Due to a matrix spike recovery outside QC limits, all aluminum (169%) results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Precision

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 20%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicate

None found.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the project RQLs to ensure that laboratory detection levels meet the required criteria. All results met the RQL.

- **Completeness**

Data package No. J00607 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiency was noted:

- Due to a matrix spike recovery outside QC limits, all aluminum (169%) results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

METALS DATA QUALIFICATION SUMMARY*

Laboratory Narrative and Chain-of-Custody Documentation

CASE NARRATIVE

J00607 / RC-114 / D9J160184

Rev01

The following report contains the analytical results for two water samples submitted to TestAmerica by Washington Closure Hanford. The samples were received October 16, 2009, according to documented sample acceptance procedures.

Client ID	Lab ID	Analyses Requested	Analyses Performed
J19369	D9J160184-001	300.0/6010	300.0A/6010B/6020
J19370	D9J160184-002	300.0/6010	300.0A/6010B/6020

Dilution factors and qualifiers are provided to assist in the interpretation of the results. In some cases, due to interferences or analytes present above the linear calibration curve, samples must be analyzed at a dilution. For samples analyzed at a dilution, the reporting limits are adjusted relative to the dilution required. Dilutions made for reasons other than the presence of target compounds are addressed in the Supplemental QC Information section.

This report includes reporting limits (RLs) less than TestAmerica Denver's practical quantitation limits. These reporting limits are being used specifically at the client's request to meet the needs of this project. Please note that data are not normally reported to these levels without qualification, since they are inherently less reliable and potentially less defensible than required by the current NELAC standards. Please note that Non-Detect (U) results have been evaluated down to the Method Detection Limit (MDL) and should be considered Non-Detect (U) at the MDL.

TestAmerica utilizes USEPA approved methods in all analytical work. The results apply only to the samples included in this report and meet all requirements of NELAC. All data have been reviewed for compliance with the laboratory QA/QC plan and have been found to be compliant with laboratory protocols, with the exception of any items noted below.

SUPPLEMENTAL QC INFORMATION

Sample Receipt

Samples were received in good condition at a temperature of 3.6°C. No anomalies were encountered during sample receipt.

As instructed by the client on October 21, 2009, samples J19369 and J19370 were logged for Bromide, Chloride, Fluoride, Nitrite as N, ortho-Phosphate as P, and Sulfate analyses, in addition to the Nitrate as N analysis requested on the chains-of-custody.

Total Metals – SW846 6010B/6020

Serial dilution of a digestate in analytical batch 9292449 indicates that physical and chemical interferences are present for Aluminum and Sodium. Results in the analytical report have been flagged with an "L".

Low levels of Sodium and Boron are present in the method blank associated with QC batch 9292449. Because the concentrations in the method blank are not present at levels greater than the reporting limits, corrective action is deemed unnecessary.

Aluminum was recovered outside the QC control limits in the Matrix Spike performed on sample J19369. There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

Total Metals – SW846 6010B/6020 (cont.)

The percent recovery was not calculated for Iron in the Matrix Spike performed on sample J19369, due to the sample concentration reading greater than four times the spike amount. The acceptable LCS analysis data indicated that the analytical system was operating within control.

The duplicate analysis of sample J19369 exhibited RPD data outside the QC control limits for Barium. It can be noted that the RPD was calculated based on a value below the method detection limit, and as such, could not be reliably calculated.

No other anomalies were encountered.

Wet Chemistry – MCAWW 300.0A

The Nitrate as N, Nitrite as N, and ortho-Phosphate as P analyses for samples J19369 and J19370 were performed 30 minutes to 3 hours outside the 48 hour recommended sample holding times. The samples were received at the laboratory with insufficient time remaining for the laboratory to perform the analyses within the recommended holding times. It is TestAmerica's policy to analyze all samples within holding times; however, the laboratory cannot guarantee that hold times will be met when samples are received with less than half the hold time remaining. The client was notified on October 19, 2009.

It can be noted that the recovery for the Sulfate Matrix Spike performed on sample J19369 is within QC control limits; however, the value is estimated as the concentration exceeded the calibration range.

No other anomalies were encountered.

Revisions – 11/3/09

The revisions included in this report are as follows:

1. **Total Metals – SW846 6010B:** As requested by the client on November 2, 2009, Arsenic, Selenium, Lead and Boron results have been reported, in addition to the Client List of ICP Metals requested on the chains-of-custody.

I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the following signature.

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

5. PRECISION (Levels C, D, and E)

Duplicate RPD values acceptable? .... [✓ Yes] No N/A
Duplicate results acceptable? .... [✓ Yes] No N/A
MS/MSD standards NIST traceable? (Levels D, E) .... Yes No [✓ N/A]
MS/MSD standards expired? (Levels D, E) .... Yes No [✓ N/A]
Field duplicate RPD values acceptable? .... Yes No [✓ N/A]
Field split RPD values acceptable? .... Yes No [✓ N/A]
Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

Comments:

6. ICP QUALITY CONTROL (Levels D and E)

ICP serial dilution samples analyzed? .... Yes No [✓ N/A]
ICP serial dilution %D values acceptable? .... Yes No [✓ N/A]
ICP post digestion spike required? .... Yes No [✓ N/A]
ICP post digestion spike values acceptable? .... Yes No [✓ N/A]
Standards traceable? .... Yes No [✓ N/A]
Standards expired? .... Yes No [✓ N/A]
Transcription/calculation errors? .... Yes No [✓ N/A]

Comments:

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

7. FURNACE AA QUALITY CONTROL (Levels D and E)

Duplicate injections performed as required? .... Yes No [✓ N/A]
Duplicate injection %RSD values acceptable? .... Yes No [✓ N/A]
Analytical spikes performed as required? .... Yes No [✓ N/A]
Analytical spike recoveries acceptable? .... Yes No [✓ N/A]
Standards traceable? .... Yes No [✓ N/A]
Standards expired? .... Yes No [✓ N/A]
MSA performed as required? .... Yes No [✓ N/A]
MSA results acceptable? .... Yes No [✓ N/A]
Transcription/calculation errors? .... Yes No [✓ N/A]
Comments:

8. HOLDING TIMES (all levels)

Samples properly preserved? .... [✓ Yes] No N/A
Sample holding times acceptable? .... [✓ Yes] No N/A
Comments:

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

9. RESULT QUANTITATION AND DETECTION LIMITS (all levels)

Results reported for all requested analyses? .... [✓ Yes] No N/A

Results supported in the raw data? (Levels D, E) .... Yes No [✓ N/A]

Samples properly prepared? (Levels D, E) .... Yes No [✓ N/A]

Detection limits meet RDL? .... [✓ Yes] No N/A

Transcription/calculation errors? (Levels D, E) .... Yes No [✓ N/A]

COMMENTS:

SDG J00625 **SAF-RC-114**

Date: 9 November 2009
To: Washington Closure Hanford Inc. (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA – Pore Water – Phase II
Subject: Wet Chemistry - Data Package No. J00625-TAL

INTRODUCTION

This memo presents the results of data validation on Data Package No. J00625 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J193C1	10/27/09	Water	C	See note 1
J193C2	10/27/09	Water	C	See note 1

1 – Chromium VI by 7196A.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

Holding Times

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 24 hours for chromium VI.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Method Blanks**

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 80% to 120%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 79% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 120% or less than 80% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 120% and a sample result less than the IDL, no qualification is required.

Due to the lack of a matrix spike and matrix spike duplicate analysis, all chromium VI results were qualified as estimates and flagged "J".

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 20%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

Due to the lack of matrix spike and matrix spike duplicate analysis, all chromium VI results were qualified as estimates and flagged "J".

Field Duplicate

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package J00625 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiency was noted:

- Due to the lack of a matrix spike and matrix spike duplicate analysis, all chromium VI results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Number of Samples	:	Two (2)
Sample Type	:	Water
SDG Number	:	J00625
Data Deliverable	:	15-Day / Summary

CASE NARRATIVE

I. Introduction

On October 28, 2009 two water samples were received at TestAmerica for chemistry analysis. Upon receipt, the samples were assigned the following laboratory ID numbers to correspond with the Washington Closure Hanford (WCH) specific IDs:

WCH ID#	TARL ID#	MATRIX	DATE OF RECEIPT
J193C1	LND30	WATER	10/28/09
J193C2	LND35	WATER	10/28/09

II. Sample Receipt

The samples were received in good condition and no abnormalies were noted during check-in. The client called on September 30, 2009 and instructed TestAmerica to assign a 15 day turn around time to all RC-114 samples received on 10/1/09 or later.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

The requested analyses were:

Chemical Analysis
Hexavalent Chromium by EPA method 7196A

IV. Quality Control

The analytical results for each analysis performed includes a minimum of one laboratory control sample (LCS), one method (reagent) blank, and one duplicate sample analysis. Any exceptions have been noted in the "Comments" section.

QC and sample results are reported in the same units.

V. Comments

Chemical Analysis

Hexavalent Chromium by EPA method 7196A:

The sample was analyzed with a 50ml aliquot due to insufficient sample volume. There was insufficient volume to analyze sample QC.

Except as noted, the LCS, batch blank and sample results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

INTRODUCTION

This memo presents the results of data validation on Data Package No. J00637 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J193F0	11/7/09	Water	C	Strontium-90
J193F1	11/7/09	Water	C	Strontium-90
J193F3	11/8/09	Water	C	Strontium-90
J193F4	11/8/09	Water	C	Strontium-90
J193F5	11/9/09	Water	C	Strontium-90
J193F6	11/8/09	Water	C	Strontium-90
J193F7	11/8/09	Water	C	Strontium-90
J19421	11/8/09	Water	C	Strontium-90
J19436	11/9/09	Water	C	Strontium-90
J195D0	11/9/09	Water	C	Strontium-90
J19CX0	11/9/09	Water	C	Strontium-90

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Holding times are calculated from Chain-of-Custody forms to determine the validity of the results. The maximum holding time for radiochemical analysis is 6 months.

All holding times were acceptable.

- **Preparation (Method) Blanks**

Laboratory Blanks

Blank samples are analyzed to determine if positive results are due to laboratory reagent, sample container, or detector contamination. If blank analysis results indicate the presence of an analyte above the minimum detectable activity (MDA), the following qualifiers are applied: All positive sample results less than five times the highest blank concentration are qualified as estimates and flagged "J"; sample results below the MDA are qualified as undetected and flagged "U"; sample results above the MDA and greater than five times the highest blank concentration are not qualified.

All laboratory blank results were acceptable.

Field (Equipment) Blank

No equipment blanks were submitted for analysis.

- **Accuracy**

Accuracy is evaluated from laboratory control sample (LCS) or blank spike sample (BSS) batch samples and spiked samples from the analytical batch. Measured activities are compared to the known added amounts. The acceptable LCS or BSS and matrix spike (MS) recovery range is 65-135%. In addition, samples may be spiked with a radiochemical tracer to assist in isolating the radioisotope of interest with the yield of the tracer being used in calculating sample activity. The acceptable range for tracer recovery is 20% to 105%. Spike sample results outside the above ranges result in associated sample results being qualified as estimates, or not qualified, depending on the activity of the individual sample. Results are rejected for LCS/BSS recoveries of less than 30% and tracer recoveries of less than 20%, and tracer recoveries of greater than 115% for detected results.

All accuracy results were acceptable.

- **Laboratory Duplicates**

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the contract required detection limit (CRDL) and the RPD is less than 35%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All duplicate results were acceptable.

Field Duplicates

No field duplicates were submitted for analyis.

- **Detection Levels**

Reported analytical detection levels for undetected analytes are compared against the project RQLs to ensure that laboratory detection levels meet the required criteria. Eight analytes exceeded the RQL. Under the WCH statement of work, no qualification is required. All other analytes met the RQL.

- **Completeness**

Data package No. J00601 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

Eight analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH statement of work are as follows:

U - Indicates the compound or analyte was analyzed for and not detected above the minimum detectable activity (MDA) in the sample. The value reported is the sample result corrected for sample dilution and moisture content by the laboratory The data is usable for decision making purposes.

UJ - Indicates the compound or analyte was analyzed for and not detected at concentrations above the minimum detectable activity (MDA) in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate, but is usable for decision making purposes.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

CASE NARRATIVE

I. Introduction

On November 12, 2009 eleven water samples were received at TestAmerica for radiochemical analysis. Upon receipt, the samples were assigned the following laboratory ID numbers to correspond with the Washington Closure Hanford (WCH) specific IDs:

WCH ID#	TARL ID#	MATRIX	DATE OF RECEIPT
J19CX0	LPCHH	WATER	11/12/09
J193F7	LPCJE	WATER	11/12/09
J193F6	LPCKJ	WATER	11/12/09
J193F5	LPCKX	WATER	11/12/09
J193F4	LPCLA	WATER	11/12/09
J193F3	LPCLL	WATER	11/12/09
J193F1	LPCLN	WATER	11/12/09
J193F0	LPCL1	WATER	11/12/09
J19436	LPCL5	WATER	11/12/09
J19421	LPCL6	WATER	11/12/09
J195D0	LPCMA	WATER	11/12/09

I. Sample Receipt

The samples were received in good condition and no anomalies were noted during check-in.

Washington Closure Hanford
November 19, 2009

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

The requested analyses were:

Gas Proportional Counting
Total Strontium by method RL-GPC-003 (RICH-RC-5006)*

*SOP ID's changed effective 7-01-2008. Attached is a cross reference until SOP ID's are changed in all systems.

IV. Quality Control

The analytical results for each analysis performed includes a minimum of one laboratory control sample (LCS), one method (reagent) blank, and one duplicate sample analysis. Any exceptions have been noted in the "Comments" section.

QC and sample results are reported in the same units.

V. Comments

Gas Proportional Counting
Total Strontium by method RL-GPC-003 (RICH-RC-5006):
The MDA for the samples, except for the sample and sample duplicate, did not meet CRDL due to insufficient volume. Except as noted, the LCS, batch blank, samples and sample duplicate (J193P5) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

SDG J00646 SAF-RC-114

Date: 2 February 2010
To: Washington Closure Hanford Inc. (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA – Pore Water – Phase III
Subject: Radiochemistry - Data Package No. J00646-TAL

INTRODUCTION

This memo presents the results of data validation on Data Package No. J00646 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J19424	12/2/09	Water	C	Tritium
J195B4	12/2/09	Water	C	Tritium
J195B5	12/3/09	Water	C	Tritium
J195B6	12/4/09	Water	C	Tritium
J195B7	12/4/09	Water	C	Tritium
J195B8	12/4/09	Water	C	Tritium
J195B9	12/5/09	Water	C	Tritium
J195C0	12/2/09	Water	C	Tritium
J195C1	12/7/09	Water	C	Tritium
J195C2	12/8/09	Water	C	Tritium
J195C3	12/8/09	Water	C	Tritium

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Holding times are calculated from Chain-of-Custody forms to determine the validity of the results. The maximum holding time for radiochemical analysis is 6 months.

All holding times were acceptable.

- **Preparation (Method) Blanks**

Laboratory Blanks

Blank samples are analyzed to determine if positive results are due to laboratory reagent, sample container, or detector contamination. If blank analysis results indicate the presence of an analyte above the minimum detectable activity (MDA), the following qualifiers are applied: All positive sample results less than five times the highest blank concentration are qualified as estimates and flagged "J"; sample results below the MDA are qualified as undetected and flagged "U"; sample results above the MDA and greater than five times the highest blank concentration are not qualified.

All laboratory blank results were acceptable.

Field (Equipment) Blank

No equipment blanks were submitted for analysis.

- **Accuracy**

Accuracy is evaluated from laboratory control sample (LCS) or blank spike sample (BSS) batch samples and spiked samples from the analytical batch. Measured activities are compared to the known added amounts. The acceptable LCS or BSS and matrix spike (MS) recovery range is 65-135%. In addition, samples may be spiked with a radiochemical tracer to assist in isolating the radioisotope of interest with the yield of the tracer being used in calculating sample activity. The acceptable range for tracer recovery is 20% to 105%. Spike sample results outside the above ranges result in associated sample results being qualified as estimates, or not qualified, depending on the activity of the individual sample. Results are rejected for LCS/BSS recoveries of less than 30% and tracer recoveries of less than 20%, and tracer recoveries of greater than 115% for detected results.

Due to the lack of a matrix spike analysis, all tritium results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

- **Laboratory Duplicates**

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the contract required detection limit (CRDL) and the RPD is less than 35%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects. All duplicate results were acceptable.

Field Duplicates

No field duplicates were submitted for analysis.

- **Detection Levels**

Reported analytical detection levels for undetected analytes are compared against the project RQLs to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package No. J00646 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiency was noted:

Due to the lack of a matrix spike analysis, all tritium results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH statement of work are as follows:

U - Indicates the compound or analyte was analyzed for and not detected above the minimum detectable activity (MDA) in the sample. The value reported is the sample result corrected for sample dilution and moisture content by the laboratory The data is usable for decision making purposes.

UJ - Indicates the compound or analyte was analyzed for and not detected at concentrations above the minimum detectable activity (MDA) in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate, but is usable for decision making purposes.

J - Indicates the compound or analyte was analyzed for and detected Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

Data Deliverable	15-Day / Summary

CASE NARRATIVE

I. Introduction

On December 15, 2009 eleven water samples were received at TestAmerica for radiochemical analysis. Upon receipt, the samples were assigned the following laboratory ID number to correspond with the Washington Closure Hanford (WCH) specific ID:

WCH ID#	TAL ID#	MATRIX	DATE OF RECEIPT
J195B4	LQ474	WATER	12/15/09
J195B5	LQ473	WATER	12/15/09
J195B6	LQ470	WATER	12/15/09
J195B7	LQ47T	WATER	12/15/09
J195B8	LQ47L	WATER	12/15/09
J195B9	LQ47H	WATER	12/15/09
J19424	LQ465	WATER	12/15/09
J195C0	LQ461	WATER	12/15/09
J195C1	LQ46P	WATER	12/15/09
J195C2	LQ46D	WATER	12/15/09
J195C3	LQ45W	WATER	12/15/09

II. Sample Receipt

The samples were received in good condition and no anomalies were noted during check-in.

Washington Closure Hanford
December 30, 2009

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

The requested analyses were:

Liquid Scintillation Counting
Tritium by method RL-LSC-005 (RICH-RC-5007)*

IV. Quality Control

The analytical results for each analysis performed includes a minimum of one laboratory control sample (LCS), one method (reagent) blank, and one duplicate sample analysis. Any exceptions have been noted in the "Comments" section.

QC and sample results are reported in the same units.

V. Comments

Liquid Scintillation Counting

Tritium by method RL-LSC-005 (RICH-RC-5007):
The LCS, batch blank, samples and sample duplicate (J195C3) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

COMMENTS:

SDG J00665 SAF-RC-114

Date: 27 March 2010
To: Washington Closure Hanford Inc. (technical representative)
From: ELR Consulting
Project: Columbia River Component of the RCBRA – Pore Water – Phase III
Subject: Radiochemistry - Data Package No. J00665-TAL

INTRODUCTION

This memo presents the results of data validation on Data Package No. J00665 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J19F41	1/17/10	Water	C	See note 1
J19F42	1/17/10	Water	C	See note 1

1 – Strontium-90 & tritium.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY PARAMETERS

· Holding Times

Holding times are calculated from Chain-of-Custody forms to determine the validity of the results. The maximum holding time for radiochemical analysis is 6 months.

All holding times were acceptable.

Preparation (Method) Blanks

Laboratory Blanks

Blank samples are analyzed to determine if positive results are due to laboratory reagent, sample container, or detector contamination. If blank analysis results indicate the presence of an analyte above the minimum detectable activity (MDA), the following qualifiers are applied All positive sample results less than five times the highest blank concentration are qualified as estimates and flagged "J"; sample results below the MDA are qualified as undetected and flagged "U"; sample results above the MDA and greater than five times the highest blank concentration are not qualified.

All laboratory blank results were acceptable.

Field (Equipment) Blank

No equipment blanks were submitted for analysis.

- **Accuracy**

Accuracy is evaluated from laboratory control sample (LCS) or blank spike sample (BSS) batch samples and spiked samples from the analytical batch. Measured activities are compared to the known added amounts. The acceptable LCS or BSS and matrix spike (MS) recovery range is 65-135%. In addition, samples may be spiked with a radiochemical tracer to assist in isolating the radioisotope of interest with the yield of the tracer being used in calculating sample activity. The acceptable range for tracer recovery is 20% to 105%. Spike sample results outside the above ranges result in associated sample results being qualified as estimates, or not qualified, depending on the activity of the individual sample. Results are rejected for LCS/BSS recoveries of less than 30% and tracer recoveries of less than 20%. and tracer recoveries of greater than 115% for detected results.

Due to the lack of a matrix spike analysis, all tritium results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

- **Laboratory Duplicates**

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the contract required detection limit (CRDL) and the RPD is less than 35%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.
All duplicate results were acceptable.

Field Duplicates

No field duplicates were submitted for analyis.

Detection Levels

Reported analytical detection levels for undetected analytes are compared against the project RQLs to ensure that laboratory detection levels meet the required criteria. Two analytes exceeded the RQL. Under the WCH statement of work, no qualification is required. All other analytes met the RQL.

Completeness

Data package No. J00665 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found

MINOR DEFICIENCIES

The following minor deficiency was noted:

- Due to the lack of a matrix spike analysis, all tritium results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Two analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH statement of work are as follows:

U - Indicates the compound or analyte was analyzed for and not detected above the minimum detectable activity (MDA) in the sample. The value reported is the sample result corrected for sample dilution and moisture content by the laboratory. The data is usable for decision making purposes.

UJ - Indicates the compound or analyte was analyzed for and not detected at concentrations above the minimum detectable activity (MDA) in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate, but is usable for decision making purposes.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

Certificate of Analysis

TestAmerica Laboratories, Inc.

Washington Hanford Closure
2620 Fermi Avenue
Richland, WA 99354

February 2, 2010

Attention: Joan Kessner

SAF Number	:	RC-114
Date SDG Closed	:	January 18, 2010
Number of Samples	:	Two (2)
Sample Type	:	Water
SDG Number	:	J00665
Data Deliverable	:	15-Day / Summary

CASE NARRATIVE

I. Introduction

On January 18, 2010 two water samples were received at TestAmerica for radiochemical analysis. Upon receipt, the samples were assigned the following laboratory ID number to correspond with the Washington Closure Hanford (WCH) specific ID:

WCH ID#	TARL ID#	MATRIX	DATE OF RECEIPT
J19F41	LTA3L	WATER	01/18/10
J19F42	LTA6K	WATER	01/18/10

II. Sample Receipt

The samples were received in good condition and no anomalies were noted during check-in.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

The requested analyses were:

Gas Proportional Counting
Strontium-90 by method RL-GPC-003 (RICH-RC-5006)*
Liquid Scintillation Counting
Tritium by method RL-LSC-005 (RICH-RC-5007)*
Chemical Analysis
Hexavalent Chromium by EPA method 7196A

*SOP ID's changed effective 7-01-2008. Attached is a cross reference until SOP ID's are changed in all systems.

IV. Quality Control

The analytical results for each analysis performed includes a minimum of one laboratory control sample (LCS), one method (reagent) blank, and one duplicate sample analysis. Any exceptions have been noted in the "Comments" section.

QC and sample results are reported in the same units.

V. Comments

Gas Proportional Counting
Strontium-90 by method RL-GPC-003 (RICH-RC-5006):
The LCS, batch blank, samples and sample duplicate (J19F41) results are within contractual requirements.

Liquid Scintillation Counting
Tritium by method RL-LSC-005 (RICH-RC-5007):
The LCS, batch blank, samples and sample duplicate (J19F41) results are within contractual requirements.

Chemical Analysis
Hexavalent Chromium by EPA method 7196A
Samples J19F41 and J19F42 were filtered prior to taking the aliquot. All the samples in the batch except the blank and LCS were analyzed with a 50 aliquot due to insufficient sample size. Except as noted, the LCS, batch blank, samples, sample duplicate (J19F42), sample matrix spike (J19F42), and matrix spike duplicate (J19F42) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

Subject: Wet Chemistry - Data Package No. J00665-TAL

INTRODUCTION

This memo presents the results of data validation on Data Package No. J00665 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J19F41	1/17/10	Water	C	See note 1
J19F42	1/17/10	Water	C	See note 1

1 - Chromium VI by 7196A

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0. September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

Holding Times

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 24 hours for chromium VI.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

Method Blanks

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

Accuracy

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 80% to 120%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 79% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 120% or less than 80% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 120% and a sample result less than the IDL, no qualification is required.

All accuracy results were acceptable.

Precision

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 20%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All duplicate results were acceptable.

Field Duplicate

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package J00665 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

None found.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Certificate of Analysis

TestAmerica Laboratories, Inc.

Washington Hanford Closure
2620 Fermi Avenue
Richland, WA 99354

February 2, 2010

Attention: Joan Kessner

SAF Number : RC-114
Date SDG Closed : January 18, 2010
Number of Samples : Two (2)
Sample Type : Water
SDG Number : J00665
Data Deliverable 15-Day / Summary

CASE NARRATIVE

I. Introduction

On January 18, 2010 two water samples were received at TestAmerica for radiochemical analysis. Upon receipt, the samples were assigned the following laboratory ID number to correspond with the Washington Closure Hanford (WCH) specific ID:

WCH ID#	TARL ID#	MATRIX	DATE OF RECEIPT
J19F41	LTA3L	WATER	01/18/10
J19F42	LTA6K	WATER	01/18/10

II. Sample Receipt

The samples were received in good condition and no anomalies were noted during check-in.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

The requested analyses were;

Gas Proportional Counting
Strontium-90 by method RL-GPC-003 (RICH-RC-5006)*
Liquid Scintillation Counting
Tritium by method RL-LSC-005 (RICH-RC-5007)*
Chemical Analysis
Hexavalent Chromium by EPA method 7196A

*SOP ID's changed effective 7-01-2008. Attached is a cross reference until SOP ID's are changed in all systems.

IV. Quality Control

The analytical results for each analysis performed includes a minimum of one laboratory control sample (LCS), one method (reagent) blank, and one duplicate sample analysis. Any exceptions have been noted in the "Comments" section.

QC and sample results are reported in the same units.

V. Comments

Gas Proportional Counting
Strontium-90 by method RL-GPC-003 (RICH-RC-5006):
The LCS, batch blank, samples and sample duplicate (J19P41) results are within contractual requirements.

Liquid Scintillation Counting
Tritium by method RL-LSC-005 (RICH-RC-5007):
The LCS, batch blank, samples and sample duplicate (J19P41) results are within contractual requirements.

Chemical Analysis
Hexavalent Chromium by EPA method 7196A
Samples J19P41 and J19P42 were filtered prior to taking the aliquot. All the samples in the batch except the blank and LCS were analyzed with a 50 aliquot due to insufficient sample size. Except as noted, the LCS, batch blank, samples, sample duplicate (J19P42), sample matrix spike (J19P42), and matrix spike duplicate (J19P42) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

INTRODUCTION

This memo presents the results of data validation on Data Package No J00714 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J19J73	2/5/10	Water	C	See note 1
J19J74	2/5/10	Water	C	See note 1

1 – Chromium VI by 7196A.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1 Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Documentation Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Analytical holding times for metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Soil samples must be analyzed within 24 hours for chromium VI.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Method Blanks**

Method Blanks

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

All method blank results were acceptable.

Field (Equipment) Blank

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 80% to 120%. Samples with a recovery of less than 30% and a sample result below the IDL are rejected and flagged "UR". Samples with a recovery of 30% to 79% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 120% or less than 80% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a recovery greater than 120% and a sample result less than the IDL, no qualification is required.

All accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of matrix spike duplicate (MSD) analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the CRDL and the RPD is less than 20%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All duplicate results were acceptable.

Field Duplicate

No field duplicates were submitted for analysis.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

- **Completeness**

Data package J00714 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

None found.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

BJ - Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Number of Samples	:	Two (2)
Sample Type	:	Water
SDG Number	:	J00714
Data Deliverable	:	15-Day / Summary

CASE NARRATIVE

I. Introduction

On February 6, 2010 two water samples were received at TestAmerica for radiochemical analysis. Upon receipt, the samples were assigned the following laboratory ID number to correspond with the Washington Closure Hanford (WCH) specific ID:

WCH ID#	TARL ID#	MATRIX	DATE OF RECEIPT
J19J73	LVEMN	WATER	02/06/10
J19J74	LVEMT	WATER	02/06/10

II. Sample Receipt

The samples were received in good condition and no anomalies were noted during check-in.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

The requested analyses were:

Gas Proportional Counting
Strontium-90 by method RL-GPC-003 (RICH-RC-5006)*
Liquid Scintillation Counting
Tritium by method RL-LSC-005 (RICH-RC-5007)*
Chemical Analysis
Hexavalent Chromium by EPA method 7196A

*SOP ID's changed effective 7-01-2008. Attached is a cross reference until SOP ID's are changed in all systems.

IV. Quality Control

The analytical results for each analysis performed includes a minimum of one laboratory control sample (LCS), one method (reagent) blank, and one duplicate sample analysis. Any exceptions have been noted in the "Comments" section.

QC and sample results are reported in the same units

V. Comments

Gas Proportional Counting
Strontium-90 by method RL-GPC-003 (RICH-RC-5006):
The LCS, batch blank, samples and sample duplicate (J19J74) results are within contractual requirements.

Liquid Scintillation Counting
Tritium by method RL-LSC-005 (RICH-RC-5007):
The LCS, batch blank, samples and sample duplicate (J19J73) results are within contractual requirements.

Chemical Analysis
Hexavalent Chromium by EPA method 7196A
Samples J19J73 and J19J74 were filtered prior to aliquoting. Samples J19J73, J19J74, J19J73 DUP, J19J73 MS and J19J73 MSD were analyzed with a 50ml aliquot due to insufficient sample volume. Except as noted, the LCS, batch blank, samples, sample duplicate (J19J73), sample matrix spike (J19J73), and matrix spike duplicate (J19J73) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

From: ELR Consulting
Project: Columbia River Component of the RCBRA – Pore Water – Phase III – 100-D
Subject: Radiochemistry - Data Package No. J00714-TAL

INTRODUCTION

This memo presents the results of data validation on Data Package No. J00714 prepared by TestAmerica Laboratory Inc. (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

Sample ID	Sample Date	Media	Validation	Analyte
J19J73	2/5/10	Water	C	See note 1
J19J74	2/5/10	Water	C	See note 1

1 – Strontium-90 & tritium.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY PARAMETERS

- **Holding Times**

Holding times are calculated from Chain-of-Custody forms to determine the validity of the results. The maximum holding time for radiochemical analysis is 6 months.

All holding times were acceptable.

- **Preparation (Method) Blanks**

Laboratory Blanks

Blank samples are analyzed to determine if positive results are due to laboratory reagent, sample container, or detector contamination. If blank analysis results indicate the presence of an analyte above the minimum detectable activity (MDA), the following qualifiers are applied: All positive sample results less than five times the highest blank concentration are qualified as estimates and flagged "J"; sample results below the MDA are qualified as undetected and flagged "U"; sample results above the MDA and greater than five times the highest blank concentration are not qualified.

All laboratory blank results were acceptable.

Field (Equipment) Blank

No equipment blanks were submitted for analysis.

- **Accuracy**

Accuracy is evaluated from laboratory control sample (LCS) or blank spike sample (BSS) batch samples and spiked samples from the analytical batch. Measured activities are compared to the known added amounts. The acceptable LCS or BSS and matrix spike (MS) recovery range is 65-135%. In addition, samples may be spiked with a radiochemical tracer to assist in isolating the radioisotope of interest with the yield of the tracer being used in calculating sample activity. The acceptable range for tracer recovery is 20% to 105%. Spike sample results outside the above ranges result in associated sample results being qualified as estimates, or not qualified, depending on the activity of the individual sample. Results are rejected for LCS/BSS recoveries of less than 30% and tracer recoveries of less than 20%, and tracer recoveries of greater than 115% for detected results

Due to the lack of a matrix spike analysis, all tritium results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

- **Laboratory Duplicates**

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the contract required detection limit (CRDL) and the RPD is less than 35%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non detects.
All duplicate results were acceptable.

Field Duplicates

No field duplicates were submitted for analysis.

- **Detection Levels**

Reported analytical detection levels for undetected analytes are compared against the project RQLs to ensure that laboratory detection levels meet the required criteria. Three analytes exceeded the RQL. Under the WCH statement of work, no qualification is required. All other analytes met the RQL.

- **Completeness**

Data package No. J00714 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiency was noted:

- Due to the lack of a matrix spike analysis, all tritium results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Three analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH statement of work are as follows:

U - Indicates the compound or analyte was analyzed for and not detected above the minimum detectable activity (MDA) in the sample. The value reported is the sample result corrected for sample dilution and moisture content by the laboratory. The data is usable for decision making purposes.

UJ - Indicates the compound or analyte was analyzed for and not detected at concentrations above the minimum detectable activity (MDA) in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate, but is usable for decision making purposes.

J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are usable for decision-making purposes.

R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

TestAmerica

THE LEADER IN ENVIRONMENTAL TESTING

Certificate of Analysis

TestAmerica Laboratories, Inc.

Washington Hanford Closure
2620 Fermi Avenue
Richland, WA 99354

February 23, 2010

Attention: Joan Kessner

SAF Number	:	RC-114
Date SDG Closed	:	February 6, 2010
Number of Samples	:	Two (2)
Sample Type	:	Water
SDG Number	:	J00714
Data Deliverable	:	15 Day / Summary

CASE NARRATIVE

I. Introduction

On February 6, 2010 two water samples were received at TestAmerica for radiochemical analysis. Upon receipt, the samples were assigned the following laboratory ID number to correspond with the Washington Closure Hanford (WCH) specific ID:

WCH ID#	TARL ID#	MATRIX	DATE OF RECEIPT
J19J73	LVEMN	WATER	02/06/10
J19J74	LVEM1	WATER	02/06/10

II. Sample Receipt

The samples were received in good condition and no anomalies were noted during check-in.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

The requested analyses were:

Gas Proportional Counting
Strontium-90 by method RL-GPC-003 (RICH-RC-5006)*
Liquid Scintillation Counting
Tritium by method RL-LSC-005 (RICH-RC-5007)*
Chemical Analysis
Hexavalent Chromium by EPA method 7196A

*SOP ID's changed effective 7-01-2008. Attached is a cross reference until SOP ID's are changed in all systems.

IV. Quality Control

The analytical results for each analysis performed includes a minimum of one laboratory control sample (LCS), one method (reagent) blank, and one duplicate sample analysis. Any exceptions have been noted in the "Comments" section.

QC and sample results are reported in the same units

V. Comments

Gas Proportional Counting
Strontium-90 by method RL-GPC-003 (RICH-RC-5006):
The LCS, batch blank, samples and sample duplicate (J19J74) results are within contractual requirements.

Liquid Scintillation Counting
Tritium by method RL-LSC-005 (RICH-RC-5007):
The LCS, batch blank, samples and sample duplicate (J19J73) results are within contractual requirements.

Chemical Analysis
Hexavalent Chromium by EPA method 7196A
Samples J19J73 and J19J74 were filtered prior to aliquoting. Samples J19J73, J19J74, J19J73 DUP, J19J73 MS and J19J73 MSD were analyzed with a 50ml aliquot due to insufficient sample volume. Except as noted, the LCS, batch blank, samples, sample duplicate (J19J73), sample matrix spike (J19J73), and matrix spike duplicate (J19J73) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

SDG K1833 **SAF-RC-114**

Date: 7 December 2009
To: Washington Closure Hanford (technical representative)
From: ELR Consultants
Project: Columbia River Component of the RCBRA – Pore Water – Phase II
Subject: DRO - Data Package No. K1833-LLI

INTRODUCTION

This memo presents the results of data validation on Data Package No. K1833 prepared by Lionville Laboratory Inc. (LLI). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table

Sample ID	Sample Date	Media	Validation	Anaysis
J193D1	11/7/09	Solid	C	See note 1
J193D2	11/7/09	Solid	C	See note 1
J193D3	11/7/09	Solid	C	See note 1
J193D4	11/7/09	Solid	C	See note 1
J193D5	11/7/09	Solid	C	See note 1
J193D6	11/7/09	Solid	C	See note 1
J195D1	11/7/09	Solid	C	See note 1
J19420	11/7/09	Solid	C	See note 1

1 – Diesel range organics by 8015B.

Data validation was conducted in accordance with the Washington Closure Hanford (WCH) validation statement of work and the Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River (DOE/RL-2008-11, Rev. 0, September 2008). Appendices 1 through 6 provide the following information as indicated below:

Appendix 1. Glossary of Data Reporting Qualifiers
Appendix 2. Summary of Data Qualification
Appendix 3. Qualified Data Summary and Annotated Laboratory Reports
Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
Appendix 5. Data Validation Supporting Documentation
Appendix 6. Additional Data Requested by Client

DATA QUALITY OBJECTIVES

Holding Times & Sample Preservation

Analytical holding times were assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Samples must be extracted within 14 days of the date of sample collection and analyzed within 40 days from the date of extraction.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Method Blanks**

Method blank analyses are conducted to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. Analytical results for analytes present in any sample at less than five times the concentration of that analyte found in the associated blank are qualified as non detects and flagged "U". Common laboratory contaminants present in samples at less than ten times the concentration of that analyte found in the associated blank are qualified as non-detects. If a sample result is less than the CRQL and is less than five times (or less than ten times for lab contaminants) the highest associated blank result, the sample result value is raised to the CRQL level and qualified as undetected "U".

All method blank results were acceptable.

Field Blanks

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike/Matrix Spike Duplicate & Blank Spike Recoveries

Matrix spike/matrix spike duplicate analyses are used to assess the analytical accuracy of the reported data and the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike/matrix spike duplicate analyses are performed in duplicate using five compounds for which percent recoveries must be within a range of 80-120% or within laboratory control limits. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Undetected sample results with spike recoveries below control limits are qualified as estimates and flagged "UJ". Undetected sample results are not qualified if the spike recovery is above control limits. Sample results greater than five times the spike concentration require no qualification.

Due to a matrix spike () and LCS recovery outside QC limits, all diesel range organic results were qualified as estimates and flagged "J".

Surrogate Recovery

The analyses of surrogate compounds provide a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the EPA CLP program. If two surrogates of the same class of compounds (base/neutral or acid) are out of control limits, all associated sample results greater than the contract required quantitation limit (CRQL) are qualified as estimates and flagged "J". Sample results less than the CRQL and below the lower control limit are qualified as estimates and flagged "UJ". Sample results less than the CRQL with recoveries above the upper control limit require no qualification. If a surrogate recovery is less than 10%, detects are qualified as estimates and flagged "J" and nondetects are rejected and flagged "UR".

All surrogate results were acceptable.

- **Precision**

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike (MS)/matrix spike duplicate (MSD) results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed by the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. Samples results must be within RPD limits of +/-20%. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required .

Due to the lack of a matrix spike and matrix spike duplicate analysis, all motor oil results were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

One set of field duplicates (J18610/J18795) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All field duplicates results were acceptable.

Analytical Detection Levels

Reported analytical detection levels are compared against the required quantitation limits (RQL's) to ensure that laboratory detection levels meet the required criteria. Eight analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Completeness

Data package No. K1833 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiency was noted:

- Due to the lack of a matrix spike, matrix spike duplicate and LCS analysis, all motor oil results were qualified as estimates and flagged "J".
- Due to a matrix spike () and LCS recovery outside QC limits, all diesel range organic results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data *may* be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Eight analytes exceeded the RQL. Under the WCH statement of work, no qualification is required.

Appendix 1

Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the WCH validation SOW are as follows:

U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the same quantitation limit corrected for sample dilution and moisture content by the laboratory.

UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

J - Indicates the compound or analyte was analyzed for and detected Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.

R Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.

UR - Indicates the compound or analyte was analyzed for and not detected in the sample Additionally, the data is unusable due to an identified major QC deficiency.

NJ - Indicates presumptive evidence of a compound at an estimated value The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

N - Indicates presumptive evidence of a compound The data may not be valid for some specific applications usable for decision-making purposes).

Appendix 2

Summary of Data Qualification

DIESEL RANGE ORGANIC DATA QUALIFICATION SUMMARY*

SDG: K1833	**REVIEWER: ELR**	**Project: RCBRA**	**QC Issue**
COMPOUND	QUALIFIER	SAMPLES AFFECTED	REASON
Diesel range organics	J	All	MS and LCS recovery
Motor oil	J	All	No MS, MSD or LCS analysis

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

Date Received: 11-13-2009

DIESEL RANGE ORGANICS

Eight (8) water samples were collected on 11-07,08,09-2009.

The samples and associated QC samples were extracted on 11-13-2009 and analyzed according to Lionville Laboratory SOPs based on SW846, 3rd Edition procedure on 11-19,20-2009. The extraction procedure was based on method 3520C and the extracts were analyzed based on method 8015B for Diesel Range Organics.

The following is a summary of the QC results accompanying the sample results. Lionville Laboratory (LvLI) certifies that all test results meet the requirements of NELAC except as noted below:

1. All required holding times for extraction and analysis have been met.
2. The method blank was below the reporting limits for all target compounds.
3. All obtainable surrogate recoveries were within acceptance criteria.
4. All blank spike recoveries were within acceptance criteria.
5. All initial calibrations associated with this data set were within acceptance criteria.
6. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.
7. LvLI is NELAP accredited by the State of Pennsylvania. For a complete listing of accrediting authorities and the corresponding analytes/methods, please contact your Project Manager.

[illegible]

8. I certify that this sample data package is in compliance with SOW requirements, both technically and for completeness, other than the conditions detailed above. Release of the data contained in this hard-copy data package has been authorized by the laboratory manager or a designee as verified by the following signature.

Jim Daniels
