Min: 1.456e-05

Vector  
Var: Darcy velocity (m/s)  
2.110e-06  
3.227e-12  
Max: 2.110e-06  
Min: 3.227e-12

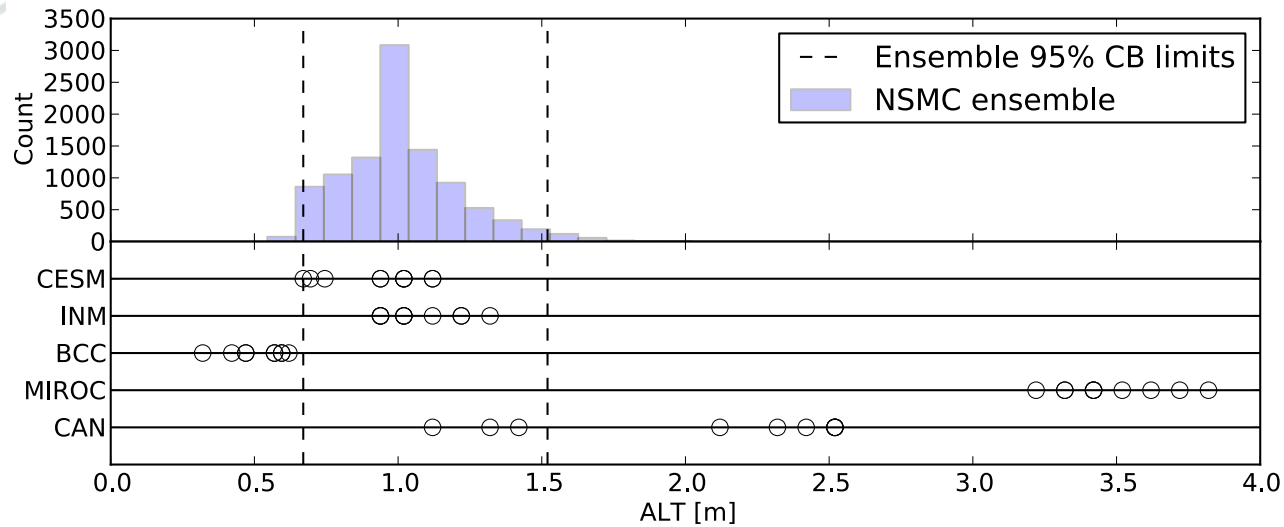

**Previous work** solved integrated hydrology (coupled surface/subsurface flow) on multiple polygons, and surface flow over larger domains to guide landscape characterization.

**Ongoing efforts** extend these to thermal hydrology with freeze/thaw dynamics in three dimensions.

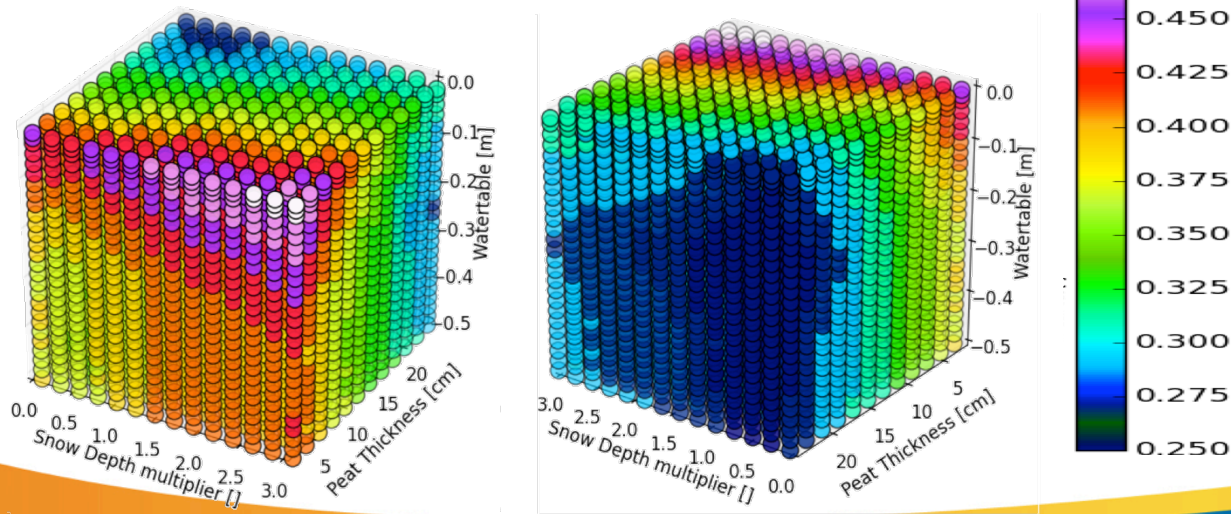

# Arctic Terrestrial Simulator

This year's publications and products

- Null-space Monte Carlo study of sensitivity of Active Layer Thickness (ALT), the depth of soil which thaws each year, to observation-constrained parameter variability.
- Systematic understanding of environmental controls on ALT.

## Active Layer Thickness

*Results: two papers in review, a third in preparation, and a "featured highlight" for DOE/BER sponsors.*
